101 SHIELDING TIPS AND TRICKS

Shielding radiated emission and susceptibility of electronics components can be done in many ways. Sometimes it is possible to achieve the same goal in 10 different ways. But what is the most economical manner and which has the longest lifespan?

On this page and the following pages we have 101 shielding tips and tricks that can help you make the right choice.

If you have any questions, do not hesitate and contact one of our enthusiastic EMI problem solvers today.

Please note, red squares with numbers in the drawing refer to the corresponding tip or trick

GASKET SELECTION & STIFFNESS OF ENCLOSURE

IP RATINGS

Shielding gaskets can be broken down into four classifications of environmental resistance. The following table explains the required installation environment for Holland Shielding Systems BV EMI-IP gaskets

Classification	IP Rating	Location	Description
Indoor	< 44	Indoor	Not intended for submersion in water. Installation in an indoor location required
Weather resistant	44- 65	Indoor / Outdoor under shelter	Not intended for submersion in water. Installation in a sheltered location required
Weatherproof	66- 67	Indoor / Outdoor	Not intended for submersion in water. Installation in a sheltered location recommended.
Submersible	68	Underwater	Full immersion.

Carbon(colloidal graphite in acetone)	+0.10			
Gold	+0.15			
Platinum	+0.15			

» 101 SHIELDING TIPS AND TRICKS

PRINCIPLE OF SHIELDING

- 1 The principle of shielding is **creating a conductive layer completely surrounding the object** you want to shield. This was invented by Michael Faraday and this system is known as a Faraday cage.
- 2 Ideally, the shielding layer will be made up of **conductive sheets or layers of metal** that are connected by means of welding or soldering, without any interruptions. The shielding is perfect when there is no difference in conductivity between the used materials. When dealing with frequencies below 30 MHz, the metal thickness affects shielding effectiveness. We also offer a range of shielding methods for plastic enclosures. A complete absence of interruptions is not a realistic goal, since the Faraday cage will have to be opened from time to time so electronics, equipment or people can be moved in or out. Openings are also needed for displays, ventilation, cooling, power supply, signals etc.
- 3 **Shielding works in both directions:** items inside the shielded room are shielded from outside influences. (Fig. 3)

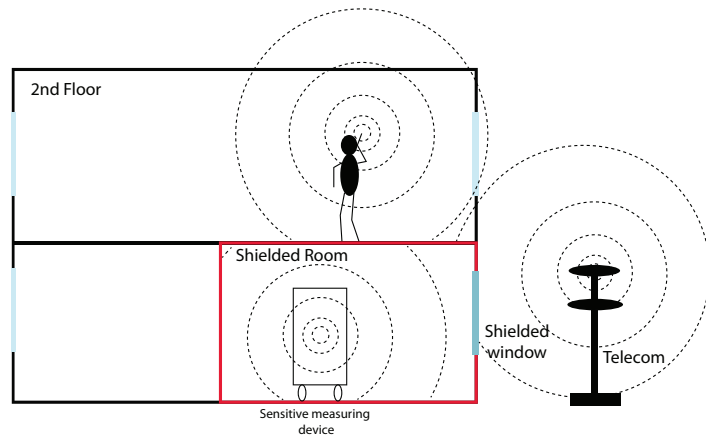

Figure 3 : Shielding works in both directions

- 4 The **quality of the cage** is expressed as the ratio of the field strength in Volts/meter (V/m) inside the cage and outside the cage.
- 5 It is common practice to **present field strength Figures in a logarithmic scale (in dB)**.
- 6 The **reduction depends on the frequency** in Hz. Each frequency has a wavelength in meters. For example 100 MHz = 100.000 kHz = 3 meter. For a better explanation, see the table on the right. (Fig. 6)

40 dB	100 times reduction of the field strength
60 dB	1.000 times
80 dB	10.000 times
100 dB	100.000 times
120 dB	1 million times
140 dB and up	Very difficult to measure, and only used in scientific applications

Figure 6 : The reduction depends on the frequency

» 101 SHIELDING TIPS AND TRICKS

WAVES

- 7 **A wave is a combination of electric field and magnetic fields.** A electromagnetic wave is composed of a magnetic part depending on the electric current (ampere), and an electrical section, depending on the electrical voltage (volts). Near the source (near-field) the magnetic part is dominant. At a greater distance, the electrical part and the magnetic part are present in a fixed ratio (far field). (Fig. 7)

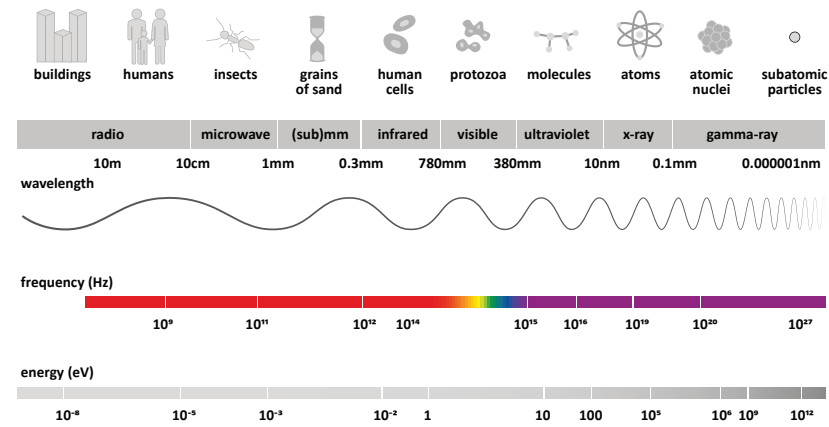

Figure 7 : Wavelength vs. Frequency

- 8 The **material thickness determines which frequencies** are blocked from penetrating into or out of the cage. For low frequencies like 10 kHz (generally the near-field/magnetic fields), a mild steel layer of 6mm is needed to achieve a reduction of 80 dB, but a frequency of 30 MHz can be shielded by copper foil that is only 0.03mm thick. For higher frequencies in the GHz area the mechanical strength of the used shielding material will generally specify the thickness of the shield.
- 9 For **very low frequencies and DC** where the magnetic field is dominant, besides thick layers also special materials like Mu-metal and Mu-ferro alloys are needed. In addition, combinations of multiple layers are required to get sufficient shielding performance. Please consult our engineers.
- 10 **When a wire penetrates a shield** that is not completely connected to the shield, it will work as an antenna and this reduce the shielding performance of the cage. This is especially the case at higher frequencies. (Fig. 10)

Figure 10 : Wires penetrates a shield

» 101 SHIELDING TIPS AND TRICKS

WHY THE FARADAY CAGE PRINCIPLE FOR EMI SHIELDING?

11 Circumstances in which EMI shielding has to be implemented

- When a product has to meet government standards like CE or FCC which regulate immunity and compatibility of products.
- The regulations do not cover the requirements of daily practice (e.g. medical instruments are tested at 3 meters distance while they are used within 15 cm).
- Extra safety is desired for military use, e.g. for EMP (electromagnetic pulses).
- If someone wants to create increased levels of shielding for TEMPEST requirements, so that there is no risk of spying.
- Sensitive instruments or equipment are to be protected from interfering or harmful frequencies.
- Rules for sensitive measuring and weight equipment like balances and petrol-delivery materials have to be met.

12 Other aspects related to shielding

- Regulations regarding ESD (electrostatic discharge).
- Regulations regarding ATEX (explosion safety).
- Lightning protection / EMP / HEMP / NEMP.
- Short circuit protection / prevention of sparks.

13 Identification systems like RFID (Radio Frequency Identification) prevent RFID from making contact with the stations. Several frequency ranges, lower the frequency are for longer distances.

- 125 kHz (Low Frequency)
- 13.56 MHz (High Frequency)
- 860 to 950 MHz (Ultra High Frequency)
- 2.45 GHz (Microwave)

14 Medical / personal protection: shielding certain frequencies can prevent illness caused by radiation levels. Protective clothing can reduce the field strength. Depending on the density. To this end, there is personal protection in the form of clothing, hats, gloves, stockings, sleeping bags, tents and so on.

HOW TO CREATE OPTIMAL EMI SHIELDING

15 In general, a shield consisting of more layers or zones is cheaper to produce than a shield made out of 1 high performance layer. It is easy to create 3 zones.

Level I The component on the PCB is shielded by a can. Shielding at the source. (Fig. 15.1)

Level II The entire PCB is shielded by foil, wraps or a box or the PCB and all the cables are connected inside the shielded box. (Fig. 15.2)

Level III Or the outer housing is shielded as well. (Fig. 15.3)

Figure 15.1 : Shielding at the source

Figure 15.2 : Shielding the entire PCB

Figure 15.3 : Shielding in three levels, see tip 16 - 24

» 101 SHIELDING TIPS AND TRICKS

SHIELDING AT THE SOURCE

16 Source

Shielding at the source is usually the most cost-effective solution. Generally speaking, the source of unwanted radiation can be produced by voltage and current through one or more components or interconnections on the PCB. Application of a shielding can will reduce it directly at the source.

17 Clip mounting

Shielding cans are mounted onto the PCB with SMD clips, which come in several sizes. After the re-flow, the can (a cover with walls attached) is placed into the clips and can subsequently be removed for adjustments.

18 Pin mounting

There are also systems with pins for through holes or covers with integrated pins that can be soldered directly onto the PCB. (Fig. 18)

19 Shield layout

Cooling holes can be made in the cover or steps to prevent short circuits with the tracks on the PCB. (Fig. 19.1) Covers can also consist of a fixed part on the PCB (fence) and a separate cover which is clipped on to this fence. (Fig. 19.2)

Figure 18 : Pin mounting used to mount PCB shielding cans

Figure 19.1 : Example of a shield layout with holes and openings for cables

Figure 19.2 : Fixed part on the PCB and a separate cover

20 Covering the entire PCB

Another option is covering the entire PCB in shielding material. This can be achieved either by means of a small housing, custom-made to exactly the right shape, or by simply wrapping or sticking material around the PCB. Foils, textiles, stretch material, and wrapshields, cut to the appropriate shape, are easy to apply. Since it is always important to prevent short circuits, all materials can be provided with insulation layers.

CABLE SHIELDING

21 Cables inside the housing

Once the PCB is covered, the attached cables can also be shielded. The longer a cable, the higher its potential for emitting lower frequencies. Shielding a wire inside the enclosure will also prevent cross-talk and will make the main enclosure act as a cavity, and thus amplify the radiation. To prevent this, the enclosure can be (partly) laminated with EM absorption material.

22 For round and flat cables we produce shields in the shape of sleeves, wraps, tubes and textiles so that all type of cables can be shielded. Some cable shields need to be grounded at both ends, but it is usually best to ground at only one end to prevent common-mode currents.

» 101 SHIELDING TIPS AND TRICKS

CABLE SHIELDING

23 The housings themselves, i.e. the rack, the box, the enclosure, the metallized box, and the Faraday cage they constitute the main cover of the entire system and also the connection to the outside world. Housings are equipped with displays, entries for power and signal lines, and cooling air-vents. For more information see the case on the beginning of this article.

24 Elements that can reduce the effectiveness of a Faraday cage

Level III A	26	32	Seams (Fig. 24.1)
Level III B	45		Doors
Level III C	10	63 69	Entries
Level III D	70	74	Transparent displays
Level III E	79		Ventilation panels
Level III F	64	69	Cables for power supply
Level III G	65		Cables for signals
Level III H	64	69	Pipes for fluids, air, heating (Fig. 24.2)
Level III I	64	69	Cables for optical connection

Figure 24.1 : The pressing force on the panels of the housing is minimized.

Figure 24.2 : Pipes of conductive material need insulating couplings.

SEAMS

25 It is important for the conductivity of the seam to be more or less identical to that of the basic material that the cage is constructed out of. Welding or soldering tends to work best, but for places that have to be opened easily several mechanical connection methods are available: clamping, screwing, adhesive, sealing, sticking.

26 Characteristics of an optimal seam

- It is flat and smooth
- It has the right dimensions (Fig. 26.1)
- The construction is stiff enough (Fig. 26.1)
- It is and will remain free of corrosion (Fig. 26.2)
- If possible, it is in a single plane

Figure 26.1 : Examples of a stiff construction to prevent openings.

Figure 26.2 : A EMI gasket combined with a environmental seal.

» 101 SHIELDING TIPS AND TRICKS

27 A superior flat surface can be achieved by machining and finally grinding the top surface. This is an expensive process and requires a stiff construction.

28 To reduce cost, **the connection can be improved by using a conductive gasket**, which will fill in any gaps. A gasket can also be used to seal against water or to meet other IP demands.

29 The softer the gasket, the more tolerance can be compensated and the lighter the eventual construction will be.

30 If more tolerance is allowed, a less accurate production method can be used and production becomes more cost-effective.

31 A lighter construction can also be effected by having smaller distances between the fixings: this results in more hinges, more locks, and more bolts. All of these extra elements result in higher cost and longer mounting and demounting times.

32 Right dimension It is possible to integrate an IP sealing with the EMI gasket. The IP gasket on the “water side “ protects the EMI gasket against corrosion.

PREVENTION OF CORROSION

33 In the design stage it is important to specify the environment

It makes a difference whether the construction has to be able to withstand only humidity, or exposure to water (possibly even salt water), fog, or condensation, e.g. during transport.

34 If the metal of the housing is sensitive to corrosion, a finishing of e.g. nickel and chrome can help the contact surface maintain the required conductivity. Materials like aluminium and zinc-plated steel develop an oxidation layer, which reduces the corrosion process but is less conductive.

35 Gasket selection & galvanic corrosion

Even when the materials of the housing withstand corrosion well, it is important that they work together not only with one another but also with the gasket (Fig. 35).

Enclosed material	Volts	Gasket material		
		Amucor shield	Ultra soft shield / Monel	Tinned copper
Zinc die-casting alloy	-1.10			
Zinc plating on steel, chromate passivated	-1.05			
Cadmium plating on steel	-0.80			
Aluminium, wrought, cast A1	-0.75			
Iron and steel: not corrosion resisting	-0.70			
Aluminium alloy/Amucor	-0.65			
Duralumin	-0.60			
Tin plate (T.C.S.)	-0.50			
Tin plating on steel	-0.45			
Chromium plating on nickel plated steel	-0.45			
Iron and steel: corrosion resisting, 12% Cr	-0.45			
Iron and steel: corrosion resisting, high Cr	-0.35			
Copper and its alloys, conductive fabric	-0.25			
Nickel-copper alloys, inc. Monel	-0.25			
Silver	0			
Carbon (colloidal graphite in acetone)	+0.10			
Gold	+0.15			
Platinum	+0.15			

Figure 35: Galvanic corrosion table

» 101 SHIELDING TIPS AND TRICKS

- 36 Sea/water environment:** In a situation where the galvanic values of the gasket and the housing material differ more than 0.3 volts in a salty environment, or 0.5 volts in an environment with just water, galvanic corrosion will occur. Even at a distance of 10 km from the sea, the atmosphere may be as salty as right on the coast. So the appropriate gasket material has to be chosen, see gasket selection graph.
- 37 Around the bolt holes should be sufficient space for a water seal.**
Water should never reach the EMI gasket or the construction via the bolt holes. Alternatively extra water sealing can be applied around the bolts in the form of rings. (Fig. 37)
- 38 For small parts,** where there is less space a gasket out of e.g. electrically conductive rubber can be used. These are available in profiles and plates, which can be cut accurately to the required dimensions.
- 39 For bigger parts** it can be more efficient to use a combined gasket. An EMI gasket with a water seal made of neoprene, silicone or EPDM rubber. (Fig. 39)
- 40 Neoprene has quite good flame retardant properties and can handle temperatures of -40 to +100 °C.**
EPDM rubber can withstand temperatures up to 120 degrees, making it suitable for the engine compartment of cars. Silicone rubber is used for temperatures up to 220 °C; it can be sterilized for medical applications and is soft. The rubbers can either be made in the shape of a foam or mousse or as a solid product.

Figure 37 : EMC / IP gasket example

Figure 39 : Combined gasket (Waterseal combined with EMC seal)

RULES OF THUMB FOR GASKET CHOICE, DEPENDING ON THE TYPE OF ENCLOSURE

- 41 Very small construction:** (smaller than 150 x 150) grooves, casted, molded or machined: conductive profiles, o-ring or cut gasket out of highly conductive rubber are suitable. (Fig. 41)
- 42 Small construction:** (about 200 x 200mm) multi-shield gasket, consisting of metal wire from top to bottom through a soft silicone rubber with a thickness of 2-3mm are suitable. (Fig. 42)
- 43 Medium size construction:** zinc-plated steel/metal: standard shield, neoprene foam with water seal, minimum width about 4mm and thickness 2-3mm. (Fig. 43)
- 44 Full size rack with door:** Ultra-soft twin shield with separate water seal or knitted mesh over silicone tube with water seal, V-shape with additional water sealing, thickness 6-10mm are suitable. Other products like finger strips, textile-covered parts, clip-on gaskets or custom build hybrid gaskets are suitable. (Fig. 44)

Figure 41 : Groove construction with conductive o-ring gasket

Figure 42 : Solutions for medium size constructions

» 101 SHIELDING TIPS AND TRICKS

Figure 43 : Solutions for small constructions

Figure 44 : Solutions for larger constructions like server racks

SHIELDED DOORS

- 45** The closing force of a shielded door/Faraday cage door should be reduced as much as possible so that it can be opened by hands. For more information read **55**.
- 46 Gasket thickness:** Ultra-soft gaskets will help limit the closing force as well as bending of the door.
- 47** Just as indication, at a server cabinet of 600 x 2500mm, a gasket of 6mm thick may be used and an electronics housing 200x600mm a gasket of 6 x 4mm is an optimal size. All our gaskets can also be provided with water sealing. In order for a gasket to have **sufficient stability**, its width should exceed its height.
- 48** In the case of a **screwed connection** at a housing, entry panels, windows, or vent panels, the closing force is less important. Depending on the plate thickness and bolt distance, 1-2mm is common and Amucor shield is a very good choice for the materials used most often.
- 49** When the housing has only **one edge flange** while a water and EMI seal are needed, this can be created by using clip-on gaskets. Of these gaskets more than 200 different shapes have been produced edged with mesh or highly conductive textiles. They are mounted by means of clamping. When we cut them into shape according to the customer's wishes, they can even make angles of 90 degrees.
- 50** For instruments and introducing **high currents** into a construction we make over 2400 different Be-Cu finger strips. These are not allowed in every country and are susceptible to being damaged when they are used in a construction that is not protected properly (knife-edge).
- 51 Gaskets can be made in the shape of a frame**, complete with mounting holes and self-adhesive strip for mounting, if desired.
- 52 In order to keep a gasket from becoming overly compressed**, it is possible to add compression stops next to the bolt holes. If there is enough space, plastic or metal rings (compression stops) with the final thickness can be integrated in the gasket.
- 53 For easy mounting** there are gaskets in a P-shape or U-shape available. These gaskets can be easily mounted on a rim due to their shape. (Fig. 53)
- 54 L-shaped gasket** can be used in constructions where EMI with water sealing is required and when there is just one flange. Maximum compression is 30%. (Fig. 54)

Figure 53 : Example of a p-shape gasket and a u-shape gasket

Figure 54 : Example image of a L-shape gasket

» 101 SHIELDING TIPS AND TRICKS

- 55 To prevent high closure force** V-shaped gaskets can be used which clamp the door not in the direction of the opening but in the direction of the door, so only the friction force is the closing force. (Fig. 55)
- 56 For special constructions** our custom-built profiles can help to create an optimal seal.
- 57 Watertight EMI gaskets in any shape** can be cut out of sheets of material like conductive rubber, or multi-shield with small conductive wires in the material. They have a compression of 10-15%. (Fig. 57)
- 58 Conductive foam** is an open structure so it is not watertight, but it can be combined with a watertight neoprene gasket.
- 59 Knitted mesh for military and low-frequency use** is available made out of full metal (10-15% compression) neoprene foam covered with knitted metal wires which has 30-40% compression. Silicone tube covered with knitting has up to 50% compression and low compression force.
- 60 The knitted-mesh gasket** can be mounted into a groove or can be produced with a fin so that it can be screwed or clamped.
- 61 When there is no groove in your construction** the knitted wire mesh gasket can be glued to self-adhesive rubber, to keep it in place.
- 62 For high-performance gaskets** to seal gaps in for example Faraday cages for sensitive measurement the gaskets can be produced in a double implementation and bolted in the center.

Figure 55 : V-shape gasket to prevent high closure force

Figure 57 : Conductive rubber gaskets can be cut in any shape according to customer drawing

CABLE SHIELDING

- 63 Cables entering a Faraday cage can carry undesirable signals** into and out of the housing. When these cables are shielded, the cable shield should be 360 degrees around the cable, and be connected to the housing using a gland or cable entry plate. Entry shielding is also available in watertight and flame retardant versions. Power lines and signal lines should be filtered when it is not certain what frequencies are on the line. (Fig. 63)
- 64 Filters for power, signals and data.** A power line coming from the grid function as an antenna of immense length and brings many unwanted frequencies with it. It has to be "cleaned" by a filter before entering the shielded room. The same goes for signal lines and pipes going into the housing. They will work as an antenna and interfere with the shielding. (Fig. 64)

Figure 63 : Cables entering a Faraday cage can carry undesirable signals

Figure 64 : Example of a power line filter mounted on a Faraday cage wall

» 101 SHIELDING TIPS AND TRICKS

- 65 Shielding for data lines** is done by converting the signal to light and bring the signal into the shielded room via a fiber optic cable through a waveguide. The fiber optic cable is non-conductive and will not bring in unwanted signals. (Fig. 65)
- 66 A power- or signal line filter should be grounded** to the Faraday cage so that there is a connection with a low impedance to the body of the shield. This is needed for discharging unwanted signals.
- 67 It is best to position all filters close together but to separate the signal line filters away from the power line filters** to prevent currents through the cage wall from the power line filters interfering with the signal line filters.
- 68 The shielded housing creates a new "ground"** and should be connected to the common ground of the building, only for safety reasons. This is to prevent voltage on the cage in respect to the earth.
- 69 When you want to enter a clean ground line inside the cage,** other than the earth line of the housing you also need a ground line filter for this extra clean ground line.

Figure 65 : Example of a fiber optic converter combined with a waveguide

Figure 71 : Example drawing of a clamp structure for mounting a transparent shielding solution

DISPLAYS

70 Products for transparent shielding

- Woven mesh **73**
- Woven mesh between sheets of acrylic, polycarbonate or glass, connected at the edges (edge bonded) **73**
- Woven mesh, fully laminated between plates of acrylic, polycarbonate or glass **73**
- Woven mesh between foil with or without self-adhesive (mesh foil) **73**
- Indium tin oxide (ITO) on foil or glass, 4 or 6mm (transparent foil)
- Copper grid on foil, high light transmission versus shielding performance **74**
- High performance combinations of above materials, framed in metal with gaskets for easy mounting **75**
- Transparent foil with anti-static layer (ESD foil)

71 Mounting a transparent window.

In order to ensure good shielding performance a transparent conductive shield can be provided with a silver contact busbar. Some shields can be made with flying mesh so that the flying mesh can be connected to the shielded housing. The shielded window should make full contact with the housing on all its sides by means of conductive adhesives, conductive seals, tape with conductive adhesive, or clamping with a gasket if desired. (Fig. 71)

72 Conductive foils can be stuck to a standard screen or window with cleanly removable self-adhesive.

More rigid transparent shields can be made with a frame or mounted with a bezel.

Warning

It is currently not possible to make transparent shields 100% optically correct because of the so called moiré effect, so minor disturbances have to be accepted.

» 101 SHIELDING TIPS AND TRICKS

CHOICE OF TRANSPARENT MATERIAL

73 Mesh foil

For shielding at low frequencies, mesh shielding types show the best performance. They have lower light transmission than for example ITO coated windows and foils but that is considered normal for a display rather than a problem. (Fig. 73)

When the foil is applied to a monitor and the lines of the mesh in the film do not correspond with the dots of the monitor a Newton's ring effect or a moiré pattern will arise. Orienting the mesh at a certain angle between 17 and 45 degrees will minimize this effect.
Please note: there is a physical rule: the finer the mesh, the darker the material, the better the shielding performance.

74 ITO Coating

Indium tin oxide coating does not produce a moiré effect and offers good shielding at higher frequencies. The product is however sensitive to acid substances, such as for instance found in finger prints. Optionally a plastic film layer may be applied in order to protect the ITO layer. (Fig. 74)

75 Framed windows

We produce turnkey shielded windows with up-to and even over 100 dB attenuation that can be installed directly into an MRI room. These windows are framed and have several layers of shielding, all of which are connected to one another. (Fig. 75)

Figure 73 : Example of a single layer mesh foil window (mesh bonded on the top of a window) and a double layer mesh foil window (mesh between two layers of glass or plastic).

Figure 74 : Possible structure of an ITO window

SHIELDING METHODS FOR PLASTIC HOUSING

76 It is possible to apply a **shielding foil** inside the housing, either completely or partially glued to the housing. With the use of stiffer foils a shielded box can be created inside the plastic housing in cases where there is no need to have the housing fit a specific shape. Lips on the precut foil can be used for grounding and/or mounting.

77 **For housings with complex shapes**, a shielding paint or spray (in cans) can be used. The paint is filled with conductive metal particles like nickel, copper, silver or combinations.

78 **Metallization** under vacuum (sputtering) is another option; this can also be done partially. Since a jig is needed for this process, it is not recommended for small production amounts. (Fig. 78)

79 Parts can be subjected to **galvanic treatment** when dealing with larger quantities.

Figure 75 : Example of a framed ready to install high performance shielding window

Figure 78 : Example of plastic housings with shielding paint.

» 101 SHIELDING TIPS AND TRICKS

VENTILATION PANELS

80 Within a few days we can produce **Honeycomb ventilation panels** according to the customer's drawing. The honeycomb structure is like waveguides and lets air through while blocking electromagnetic waves from entering.

The cell size of the honeycombs is 3.2mm and combinations of several layers is possible, even under cross constructions for higher performance. A cross cell honeycomb consists of minimal two layers of Honeycomb material stepped and rotated 90 degrees relative to each other. This results in a good shielding performance independent of the polarization of the waves. (Fig. 80)

81 **To prevent from dust**, a dust filter can be integrated in the ventilation panel. The dust filter can also be mounted to the outside of the enclosure. (Fig. 81)

82 The standard cost-effective honeycomb is made of aluminium but **for special applications like EMP** it can also be made out of mild steel, which is more expensive. (Fig. 82)

Figure 80 : Example of a cross-cell Honeycomb ventilation panel

Figure 81 : From left to right, Honeycomb with dust filter, cross cell, single cell straight, single cell slant 45 degrees, double slant to prevent eavesdropping

Figure 82 : Picture of a EMP proof Honeycomb ventilation panel

83 **A honeycomb ventilation panel can be framed and pre-drilled on request for easy mounting** or can be produced frameless with optional a pressed flange for smaller constructions or when the honeycomb ventilation panel is mounted in a clamped construction.

84 **For outdoor use** the honeycomb can be treated with a nickel or other finish. This is to protect the honeycomb ventilation panel from environmental influences such as corrosion.

85 **To keep raindrops from falling into the enclosure** we can make the honeycomb also at a slant (45 degrees is standard)

86 **Two layers of slanted honeycomb** placed opposite to one another also make it impossible for metal rods to be entered into the cage, and thus prevent from electrocution.

87 **Mounting framed honeycombs** can be done via through holes or threaded holes which are flow drilled into the frame in order to achieve a good screw length. Flow drilling is better than using rivets which may become loosened.

88 **Honeycombs can also be used as flow straighteners** since the structure of the honeycomb material ensures that air is blown in a fixed direction.

89 **The honeycombs can optionally be provided with a flange** so that the honeycomb after mounting forms one whole shape with the shielded enclosure. (Fig 89.1 & 89.2)

Figure 89.1 : Picture of a frameless Honeycomb.

Figure 89.2 : Drawing of a frameless Honeycomb construction

» 101 SHIELDING TIPS AND TRICKS

CABLES

- 90 Cables from and to a shielded enclosure** should also be shielded when no sufficient entry like power line filters are used.
- 91 Optimal cable shielding can be achieved with several materials** like conductive flexible shielding tubes, wraps made of knitted metal, highly conductivity textiles or foils. All these materials can be supplied with- or without self-adhesive
- 92 The cable shield should be low impedance connected** at the entrance of the screen, wall or body of the shielded enclosure. That way there is not only a galvanic connection but this also creates a high frequency coupling. A full 360-degrees connection around the cable works best. For this purpose we produce cable entries. (Fig. 92)

Figure 92 : Example of a full 360 degrees connection around the cable

- 93 Inside the enclosure cables can emit radiation which can then be amplified by the cavity of the enclosure**, so it may be important to also shield the cables inside the enclosure. Tie-wraps and compressible cable-clamping strips can be helpful to make good connections with the conductive metal connector of the cable.

FINGERSTRIPS

- 94 To pass on higher currents** for entry plates and so on, a very good product are beryllium copper fingerstrips. Please note that not all countries accept these due to the percentage of beryllium which is toxic, therefore we have developed many other types of conductive gaskets. Which are more friendly for the environment and also less sensitive for damaging. Also a good solution is to place knit mesh between the entry panel and the cage wall.
- 95 For screwed connections** the 2400 series twisted fingerstrips are very popular. They can be compressed to the fingerstrips material thickness like 0.25mm. Most versions can be stuck with a self-adhesive strip to keep the strip in place.
- 96 For shielded doors and Faraday cage doors** you need a bigger range of compression. You find these in the 2800 series fingers can be clamped, soldered or screwed.
- 97 The 2100 series clip-on mounting Fingerstrips can be clamped** on regular metal plate thicknesses like 0.5, 0.8, 1 and 1.5mm. Some even have lances so that the strip will not slip loose quickly.
- 98 When there is a wide range of compression required**, our 2200 series Snap-on Fingerstrips or our 2300 series Stick-on fingerstrips may be suitable. These fingerstrips with self-adhesive can be integrated in the construction. Snap-on Fingerstrips can be firmly mounted in slots in your construction so that also a compression to nearly 0.25 can be realized. (Fig. 98)
- 99 For special constructions** the 2500 series show fingers mounted under an 90 degree angle. (Fig. 99)
- 100 For circular mounting** the fingers in the 2600 series have on top of the finger spherical tips so that there is under any angle a good point contact.
- 101 For sliding, rotating and moving applications**, please contact our specialists. To prevent wear down there is a conductive lubricant available.

Figure 98 : Snap-on fingerstrips for slot mounting and large compression

CLIP-ON PCB SHIELDING SYSTEM 1500

EMI/RFI shielding and screening cans/covers for printed circuit boards

EMI screening covers (shielding cans) for PCB's were developed to shield only certain parts of electronic equipment from electromagnetic radiation at the source, rather than all of the components in the entire housing.

EMI shielding cans are available in standard sizes or can be produced customized within a few days.

Whether it is for a small number of prototypes or large production runs we can manufacture the precision components you require.

1500 CLIP-ON SHIELDING SYSTEM

This EMI/RFI shielding system for PCB's combines small pins or clips with a removable lid (PCB shielding can), which results in high-quality EMI/RFI shielding.

ADVANTAGES

- Less space taken up on the board
- Flexible clip positioning making the Clip-on system 1500 an excellent solution for series of 1 – 10.000 pieces
- For heavy-duty applications the lid can also be secured by soldering it to the clips and some of the pins
- Many different clips and pins are available for mounting the PCB shielding can to the PCB.

DESIGN TIPS FOR PCB SHIELDING CANS

1. If you have two adjacent sources of interference you can place two PCB shielding cans right next to each other turning the shielding into one large can.

2. To prevent short-circuiting it is possible to make recessed areas in the PCB shielding can.

3. If the source of radiation or interference produces a lot of heat, it is advisable to make ventilation holes in the shielding can.

4. If you are concerned that vibrations or movements may loosen the PCB shielding can from the RF shielding clips you can secure the PCB shielding can with a spud. To do this you will need holes in the right places in the design of your PCB and your PCB shielding can.

5. In order to prevent vibrations or movements from loosening the PCB shielding can from the RF shielding clips you can also place a piece of soft, compressible foam between the PCB and the housing of the device. For electric discharge, you can use an EMI gasket or an electrically conductive foam as well. For more design tips see our website.

CLIP-ON PCB SHIELDING CANS WITH COVER 1505

A fence and a removable cover creating a very rigid shielding can for printed circuit boards. The fence need to be fixed to the PCB with SMD clips

EMI screening covers (shielding cans) for PCB's were developed to shield only certain parts of electronic equipment from electromagnetic radiation at the source, rather than all of the components in the entire housing.

EMI shielding cans are available in standard sizes, or can be produced customized within a few days.

Whether it is for a small number of prototypes or large production runs, we can manufacture the precision components you require.

HIGH PERFORMANCE CLIP-ON PCB SHIELDING CAN

High performance PCB shields consisting of partial two layers that together form a very solid and double-walled PCB shield. The lid and the fence work together in one stroke, resulting in a very tight closure of the lid around the fence resulting in very high shielding performance, also for the lower frequencies.

And very important for applications requiring shielding for lower frequencies. The double wall that together has more body than a single walled PCB shield also works better at lower frequencies.

BENEFITS

- Double wall and therefore better shielding performance
- Easy lid removal for maintenance
- More robust design and therefore suitable for heavy applications
- Better corner closure, resulting in better shielding performance at today's higher frequencies

SMD MOUNTING

The fence is mounted on the printed circuit board with tiny clips. Only the fence is attached to the PCB. The cover / lid can be slid over the fence and attaches very firmly.

For applications where a lot of movement and / or vibrations can cause the cover / lid to release, a fence with pins that pass through the lid can be supplied. The pins can then be folded after placing the cover / lid so that it does not release from the fence.

PCB CLIPS

INTRODUCTION 1500 CLIPS

The 1500 series PCB shielding clips are developed to fix a PCB shielding can onto the PCB. There are SMD and through hole mounting versions available. Easy to attach the PCB shielding into the clips and remove for maintenance.

FEATURES

- Enhance your productivity by SMT process
- Seamless corners for ultra-high EMI shielding effect
- Reduce shield clip numbers to lower the costs

ADVANTAGES

- Mass production
- Easy insertion and removal
- Convenient for re-work
- Also available in 90° version for seamless corners and high shielding effectiveness
- For mobile phones, MP3, PDA, navigation systems, internet repeaters, walkie talkies and much more...

ORDER EXAMPLE

Part number

LC : Large clip
MC : Medium clip
P : Small pin
TC : Tiny clip
TCC : Tiny corner clip
UTC : Ultra tiny clip
UUTC : Ultra tiny corner clip

LARGE CLIP (FOR 1500 SERIES) LC

The large clip is a metal clip designed to attach PCB shielding cans/screening covers from our 1500 series.

This clip is to be mounted onto the surface of a PCB (SMT) and offers a fast solution for assembling RFI/EMI-shielding cans to PCB's. This clip eliminates the need for through holes and post re-flow operations on the PCB. For best performance, the shielding clip should be mounted on the PCB ground pattern. This can be done by hand or by vacuum pick-up nozzle (automated).

This clip offers a great opportunity for tuning and re-work after the assembly of the screening cover. The thickness of the screening cover can be up to 0.3mm. The clip can be supplied on reels of 1.900 pieces.

TECHNICAL SPECIFICATIONS

Material	Stainless steel
Finish	Tin plated
Packaging format	Tape & reel or Pieces
Reel quantity	1.900 on a Ø330mm reel
Contact resistance	20 milli-ohms max
Shield thickness	Up to 0.30mm
Insertion force (max)	3.0N
Withdrawal force (max)	1.0N

These values are measured under laboratory conditions. In other situations results may differ. Please read our Guarantee.

**MEDIUM CLIP
(FOR 1500 SERIES) MC**

This clip is to be mounted onto the surface of a PCB (SMT) and offers a fast solution for assembling RFI/EMI-shielding cans to PCB's. This clip eliminates the need for through holes and post re-flow operations on the PCB. For best performance, the shielding clip should be mounted on the PCB ground pattern. This can be done by hand or by vacuum pick-up nozzle (automated).

This clip offers a great opportunity for tuning and re-work after the assembly of the screening cover. The thickness of the screening cover can be in the range of 0.12 to 0.23mm. The clip can be supplied on reels of 5.000 pieces.

The Medium clip takes up 40% less space than the Large clip.

TECHNICAL SPECIFICATIONS

Material	Stainless steel
Finish:	Tin plated
Packaging format	Tape & reel or pieces
Reel quantity	5.000 pieces on a Ø330mm reel
Contact resistance	40 milli-ohms max
Shield thickness	0.12 – 0.23mm
Insertion force (max)	5.0N (0.17mm shield)
Withdrawal force (max)	0.35N
These values are measured under laboratory conditions. In other situations results may differ. Please read our Guarantee.	

**SMALL PIN
(FOR 1500 SERIES) P**

The Small pin is used to mount PCB screening cans and PCB shielding covers from our 1500 series PCB shielding cans onto your printed circuit board.

This pin is designed to be placed through the surface of the PCB and offers a fast solution for assembling RFI/EMI shields to PCB's. The clip needs through holes and post re-flow operations on the PCB.

This clip with a tinned pin can be soldered into the PCB at any available place around the screening cover.

ADVANTAGES

Thanks to the large clamping range, the pin does not have to be positioned with great precision. The recommended distance between the pins depends on the frequency that is to be shielded and the size of the PCB shielding can. For advice please consult our engineers.

**TINY CLIP
(FOR 1500 SERIES) TC**

This clip is to be mounted onto the surface of a PCB (SMT) and offers a fast solution for assembling RFI/EMI-shielding cans to PCB's. This clip eliminates the need for through holes and post re-flow operations on the PCB. For best performance, the shielding clip should be mounted on the PCB ground pattern. This can be done by hand or by vacuum pick-up nozzle (automated).

This clip offers a great opportunity for tuning and re-work after the assembly of the screening cover. The thickness of the screening cover can be in the range of 0.18 to 0.25mm. The clip can be supplied on reels of 15.000 pieces.

Please note: The tiny clip takes up 25% less space than the medium clip.

TECHNICAL SPECIFICATIONS

Material	Stainless steel
Plating	Tin plated
Material thickness	0.15mm
Thickness of shielding can	0.18- 0.25mm
Operating temperature	-40 °C ~ 200 °C
Resistance	Max 0.05 ohms
Solder ability	More than 50%
Insertion force	Max. 1.0kgf at T=0.2mm
Removal force	Min. 0.2kgf at T=0.2mm
Number of repetitions insertion	Max 25 times
Environment	Eu-RoHS compliant, Pb & halogen free
Thickness of solder cream (recommended)	0.06mm ~ 0.12mm
Quantity/reel	15.000
Finish	Tin
Packaging format	Reel and pieces
These values are measured under laboratory conditions. In other situations results may differ. Please read our Guarantee.	

**TINY CORNER CLIP
(FOR 1500 SERIES) TCC**

This clip is to be mounted onto the surface of a PCB (SMT) and offers a fast solution for assembling RFI/EMI-shielding cans to PCB's. This clip eliminates the need for through holes and post re-flow operations on the PCB. For best performance, the shielding clip should be mounted on the PCB ground pattern. This can be done by hand or by vacuum pick-up nozzle (automated).

This clip offers a great opportunity for tuning and re-work after the assembly of the screening cover. The thickness of the screening cover can be in the range of 0.18 to 0.25mm. The clip can be supplied on reels of 6.000 pieces.

The outer wing of the Tiny corner clip is higher than the inner wing to facilitate insertion of the shielding can.

TECHNICAL SPECIFICATIONS

Material	Stainless steel
Plating	Tin plated
Material thickness	0.15mm
Thickness of shielding can	0.18- 0.25mm
Operating temperature	-40 °C ~ 200 °C
Resistance	Max 0.05 ohms
Solder ability	More than 50%
Insertion force	Max. 1.0kgf at T=0.2mm
Removal force	Min. 0.2kgf at T=0.2mm
Number of insertion repetitions	Max 25 times
Environment	Eu-RoHS compliant, Pb & halogen free
Thickness of soldering paste (recommended)	0.06mm ~ 0.12mm
Quantity/reel	6.000
Finish	Tin
Packaging format	Reel and pieces
These values are measured under laboratory conditions. In other situations results may differ. Please read our Guarantee.	

**ULTRA TINY CLIP
(FOR 1500 SERIES) UTC**

This clip is to be mounted onto the surface of a PCB (SMT) and offers a fast solution for assembling RFI/EMI-shielding cans to PCB's. This clip eliminates the need for through holes and post re-flow operations on the PCB. For best performance, the shielding clip should be mounted on the PCB ground pattern. This can be done by hand or by vacuum pick-up nozzle (automated).

This clip offers a great opportunity for tuning and re-work after the assembly of the screening cover. Thickness of the screening cover can be up to 0.12mm. The clip can be supplied on reels of 20.000 pieces.

The Ultra tiny clip takes up 35% less space than the medium clip

TECHNICAL SPECIFICATIONS

Material	Stainless steel
Plating	Tin plated
Material thickness	0.15mm
Thickness of shielding can	Up to 0.12mm
Operating temperature	-40 °C ~ 200 °C
Resistance	Max 0.05 ohms
Solder ability	More than 50%
Insertion force	Max. 1.0kgf at T=0.2mm
Removal force	Min. 0.2kgf at T=0.2mm
Number of insertion repetitions	Max 25 times
Environment	Eu-RoHS compliant, Pb & halogen free
Thickness of soldering paste (recommended)	0.06mm ~ 0.12mm
Quantity/reel	20.000
Finish	Tin
Packaging format	Reel and pieces

These values are measured under laboratory conditions. In other situations results may differ. Please read our Guarantee.

Information supplied in these data sheets is based on independent and laboratory tests which Holland Shielding Systems BV, hereafter referred to as HSS believes to be reliable. HSS has no control over the design of customer's product which incorporates products, therefore it is the responsibility of the user to determine the suitability for his particular application and we recommend that the user make his own test to determine suitability.

**ULTRA TINY CORNER CLIP
(FOR 1500 SERIES) UTCC**

This clip is designed to be mounted onto the surface of a PCB (SMT) and offers a fast solution for assembling RFI/EMI-shielding cans to PCB's. This clip eliminates the need for through holes and post re-flow operations on the PCB. For best performance, the shielding clip should be mounted on the PCB ground pattern. This can be done by hand or by vacuum pick-up nozzle (automated).

This clip offers a great opportunity for tuning and re-work after the assembly of the screening cover. Thickness of the screening cover can be up to 0.12mm. The clip can be supplied on reels of 6.000 pieces.

TECHNICAL SPECIFICATIONS

Material	Stainless steel
Plating	Tin plated

The product described in this data sheet shall be of standard quality, however the products are sold without warranty of fitness for a particular purpose, either expressed or implied, except to the extent expressly stated on HSS invoice, quotation or order acknowledgment. HSS does not warrant that products described in this data sheet will be free of conflict with existing or future patents of third parties. All risks of lack of fitness, patent infringement and the like are assumed by the user.

**FIXED PCB SHIELDING CANS
1510 - 1515**

EMI screening covers (SMD shielding cans) for PCB's were developed to shield only certain parts of electronic equipment from electromagnetic radiation at the source, rather than all components in the entire housing.

EMI shielding cans are available in a wide range of sizes and types. Whether it is for a small number of prototypes or large quantities, we can manufacture the precision components that you require.

**1510 SERIES FIXED PCB SHIELDING CANS VS
1500 SERIES CLIP-ON PCB SHIELDING CANS**

Our 1500 series Clip-on PCB shielding cans combines small pins or clips with a removable lid (PCB shielding can), resulting in good quality EMI/RFI shielding.

However, some customers would like a slightly more economic solution than the clip-on PCB shielding system and then move to PCB shielding covers without clip-on system. This system is called Fixed PCB shielding cans since the cans are fixed to the PCB with conductive glue or solder.

Furthermore customers choose this way of attachment because the can will be more firmly secured to the PCB than by using the 1510 series clip-on system. This is, for example, necessary when it comes to devices with very heavy vibrations and movements.

MOUNTING

Fixed PCB shielding cans, can be provided with teeth so that the can can be glued to the PCB (mounting method T) or with pins for mounting through the PCB (mounting method P).

The same as the 1500 series Clip -on PCB shielding cans, but with teeth in order to glue the can onto the PCB. No clips are needed for mounting.

If you require a relatively large PCB shielding can, we recommend to go for the 1500 series clip-on system since it is very difficult to glue relatively large PCB shielding cans on the PCB without deformation of the can and with a good seal (no openings along the edges).

1515 SERIES (WITH REMOVABLE LID)

The 1515 has the same properties as the 1510 series. The lid has a removable top cover. This makes it easier to access the parts on the PCB for service. The product is available in copper and tinned copper, with or without cooling holes.

COPPER OR TINNED COPPER VERSION

Our 1510 and 1515 series fixed PCB shielding cans are available in both copper and tin-plated copper. The tinned copper version facilitates the soldering process.

FIXED PCB SHIELDS 1600

Used to create EMI/RFI-shielded compartments on a PCB

The 1600 Fixed PCB shield series is used to make EMI/RFI-shielded compartments on a PCB to prevent electromagnetic interference between chips/processors/parts of the PCB.

A small shielding framework or shielding fence, can be manufactured by our CNC production system, including teeth or pins in any desired size for attachment to the printed circuit board.

Tooling costs are relatively low, making this system suitable for series of 100 to 100.000 pieces. The 1600 Fixed PCB shielding series is made according to your technical drawing

OPTIONS

- Several thicknesses depending on attenuation level
- With or without electrical insulation
- With or without conductive self-adhesive
- Available in a fire-retardant version
- Can be made with a lid for extra high shielding performance
- Can be made with openings for passage of cables or ventilation

ADVANTAGES

- Can be manufactured by our CNC production system
- Suitable for series of 100 -100.000 pieces
- Made according to customer's drawing
- A sample can be produced very quickly, in only 2 days

DRAWN PCB SHIELDS 1700

EMI/RFI Drawn screening and shielding cans/covers for PCB's

Drawn PCB shields are only produced in large quantities. Production starts from 100.000 pieces. Please note that there are tooling cost involved.

This product is designed for seamless corners for ultra-high frequency shielding. Available in heights of 0.5 to 2mm and sizes from 6 to 80mm. Elastomer's can be combined with the drawn board shielding as well as ventilation openings.

These PCB shielding cans are available in:

- Copper
- Tinned copper
- Silvered copper (on request)
- Nickel (on request)

It is possible to deliver the product on tape or on reel.

COMPARTMENT SHIELD 1800

Compartment shield 1800 series for PCB's was developed to shield only a part of the printed circuit board

Electromagnetic (EM) radiation can prevent a device from functioning correctly. This is called electromagnetic interference (EMI).

Compartment shield 1800 series for PCB's was developed to shield only a part of the printed circuit board (PCB) from electromagnetic radiation at the source, rather than shielding all of the components or the entire housing/enclosure of the device against electromagnetic radiation.

Compartment shielding 1800 series is available in many sizes and configurations. Whether it is for a small number of prototypes or large production, we will be happy to produce the precision components that you require.

Compartment shield is a highly conductive foil laminated with a high-deflection, low closure-force foam layer. The housing itself is used to close the separations on the PCB. The high-deflection, low closure-force foam is also available combined with conductive fabrics or non-wovens. Please note that the compartment shield must make contact to ground.

PART NUMBERS

Foam thickness	PU foam (max. 80 % compression) + Amucor foil	PU foam (max. 80 % compression) + Conductive textile	Neoprene foam (max. 50 % compression) + Amucor foil	Neoprene foam (max. 50 % compression) + Conductive textile
3mm	1800-1-3	1800-2-3	1800-3-3	1800-4-3
4mm	1800-1-4	1800-2-4	1800-3-4	1800-4-4
5mm	1800-1-5	1800-2-5	1800-3-5	1800-4-5

1800	1 : PU Foam + Amucor foil 2 : PU Foam + Conductive textile 3 : Neoprene Foam + Amucor foil 4 : Neoprene Foam + Conductive textile	Specify the thickness in mm	Specify the length in mm	Specify the width in mm	Specify the height in mm

CONDUCTIVE FOIL PCB SHIELDING GASKETS 1550

1550 series has good elastic recovery and electric property, so it offers not only cushion property, but also electrical connecting between electrical objects including PCB. It is useful for EMI/ESD/RF countermeasure, electrical grounding and connecting as EMI Gasket and/or electric connector. It is consisted of conductive film, elastic adhesive and elastomer tube, so it is not broken and deformed like metal fingers. There are many sizes and options to meet various customers demands and needs.

GENERAL STRUCTURE

METAL CLIP VS 1550

OPTIONAL ON REQUEST

The 1550 gasket is standard delivered with one hole. Optional is a version with two holes in the gasket. Keep in mind that because of the two holes the gasket can be stiff / harder and less easy to compress.

Good elastic recovery and electric property, for electrical connecting between electrical objects

APPLICATION

- Smart phone
- Automotive
- TV
- Tablet
- PC
- LCD panel
- Navigation for electric connecting
- Grounding

CHARACTERISTICS

- Surface mount technology (SMT) compatible
- Lowest electric resistance (typical 0.06Ω)
- Excellent elasticity & low compression force
- Not easily deformed & broken by external force
- Large contact area
- Solder protection line exist
- Sizes from small to big with various options
- Proper for mass production & re-work available
- Halogen free, EU-RoHS compliant, non-flammable

TECHNICAL SPECIFICATIONS

	Standard-Type (tin)	Gold-Type (Au/Ni)

CONDUCTIVE RUBBER PCB SHIELDING GASKETS 1560

Surface Mountable Technology (SMT) compatible electric elastomer connector on PCB level

1560 series is Surface Mountable Technology (SMT) compatible electric elastomer connector. The shielding gasket has good elastic recovery and electric property, so it offers not only cushion, but also electrical connecting and grounding between electrical objects and PCB. The 1560 series consist of a conductive coating layer on an elastomer tube and a solder able metal foil under the tube. So it has good electrical conductivity and better soldering strength.

STANDARD PART NUMBERS

Part number	Dimension (mm)		
	W	H	L
1560-2.0-0.8-1.0	2.0	0.8	1.0
1560-2.0-1.1-1.0	2.0	1.1	1.0
1560-2.0-1.3-1.0	2.0	1.3	1.0
1560-2.0-1.4-1.0	2.0	1.4	1.0
1560-2.0-1.6-1.5	2.0	1.6	1.5
1560-2.0-1.8-1.5	2.0	1.8	1.5
1560-2.0-2.0-1.5	2.0	2.0	1.5
1560-2.0-2.5-1.8	2.0	2.5	1.8

* Other sizes are available on request. Any length is acceptable.

MAIN CHARACTERISTICS

- Low electric resistance
- Meet to most salt spray and environmental test
- Good resilient & recovery property. Easy to apply SMT and Repair.
- Strong soldering strength and not easy to detach on PCB

APPLICATIONS

- Smart phone
- Mobile device
- Tablet
- PC
- LCD Panel,
- Navigation for Electric Connecting and Grounding.

Notice: 1560 series PCB shielding gaskets should be compressed (about 0.2~0.3mm) on the solder cream at the place-process of SMT.

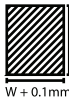

OPTIONAL ON REQUEST

The 1560 gasket is standard delivered with one hole. Optional is a version with two holes in the gasket. The product may have two holes at core for better recovery but it can be stiff / harder and less easy to compress.

» CONDUCTIVE RUBBER PCB SHIELDING GASKETS 1560

PROPERTIES

Product type	1560 series		
Color of Conductive Coating Layer	Black, dark grey		
Width	2.0mm ~		
Height	0.8mm ~		
Compression ratio	Typical 10% ~ 40% compression of original height		
Operation temperature	-35 °C ~ 160 °C		
Resistance	Vertical	Typical 0.05Ω	
	Surface	Typical 0.05Ω/□	
Soldering strength	Length direction	Not easy to detach & removal due to flexibility & shove	Typical 150gf force 1560-2.0-1.1-1.0
	Width direction		Typical 200gf force 1560-2.0-1.1-1.0
Elastomer hardness	Shore A 50		
Recovery rate (30% × 10,000 times)	Typical 93%		
Abrasion test	No metal dust after rubbing with PP tape (2kg Roller / 10 cycles)		
Thermal Shock	Change ratio of resistance & elasticity is lower than 10% (-40 °C × 0.5hr ↔ 85 °C × 0.5hr × 100 cycles)		
High Temperature/ humidity	Change ratio of resistance & elasticity is lower than 10% (85 °C / 85% RH / 100hrs)		
Salt spray	No changing of color and electric resistance (KS D 9502, 5% NaCl, 35 °C / 48hrs)		
Flammability	Classified by UL to UL 94 V-1		
Environment	Halogen free, EU-RoHS compliant, lead free		
Recommend solder pattern		We recommend a non-separated solder pattern and the 100μm thickness of solder cream	
These values are measured under laboratory conditions. In other situations results may differ. Please read our Guarantee.			

ORDER EXAMPLE

Series	Width (mm)	Height (mm)
1560	Width of the gasket (Standard 2mm)	Specify the height in mm
	Length (mm)	
	Specify the length in mm	

STRUCTURE & FEATURES

RECOMMENDED RE-FLOW SOLDERING CONDITION FOR SN PLATING

Condition of Ref-low soldering (Recommended)		
Zone	Temperature (°C)	Time (sec)
A	RT ~ 130	60
B	Max. 220	90 ~ 150
C	220 ~ 250 (max. 250)	90 ~ 150
D	220 ~ RT	Min. 60

ALTERNATIVES

Alternatives for PCB shielding gaskets are PCB contact fingers 2900 series which can be found on page 101 PCB fingers are made of metal and therefore have better conductivity and are therefore suitable for applications where high currents flow. These PCB contact fingers come in many shapes and sizes.

***Notice**

CONDUCTIVE SILICONE PCB SHIELDING GASKET 1570

The 1570 series PCB shielding gaskets are a Surface Mountable Technology (SMT) compatible electric elastomer connector which has good elastic recovery and electric property

The 1570 series PCB shielding gaskets are a Surface Mountable Technology (SMT) compatible electric elastomer connector. Our 1570 series has good elastic recovery and electric property, so it offers not only cushion, but also electrical connecting and grounding between electrical objects and PCB. The 1570 is a rectangle with narrow width and is mounted on PCB board. So this can replace Shield Can or EMI Dispensing Gasket or other electric contacts. Recommendation of compression is 10~30% of its height.

STANDARD PART NUMBERS

Part number	Dimension (mm)		
	W	H	L
1570-0.6-0.4-2.0	0.6	0.4	2.0

EMI-SHIELDING HOUSINGS/ ENCLOSURES 1900

Mu-copper housings and enclosures
for EMI shielding of PCB's

1900 series Mu-copper housings/enclosures consist of two parts cover and housing. The Mu-copper housings/enclosures provide excellent RFI/EMI shielding and protection. The EMI-shielded housing is designed to be installed in e.g. an existing plastic housing in order to protect the components against electromagnetic interference. The EMI-shielded housing can also be used to protect an entire printed circuit board in an enclosure against interference from other components in the enclosure.

Having a two-part body allows connectors, displays and switches fitted on the PCB to protrude through the cover and the housing sections. This would not be possible with single-part case bodies. Cutouts in the cover or housing sections or recesses create space for connectors, displays, and switches on the PCB.

PCB's can be mounted on plastic studs in order to insulate them from the EMI-shielded housing. The studs can be supplied threaded or with extremely strong adhesive, in any shape or size.

For heavy-duty applications the cover can be soldered to the housing or attached with studs and screws.

Available in standard dimensions and in any desired shape and size, according to your drawing. You can also specify where the insulating studs should be placed.

Available in Mu-copper or in a tinned Mu-copper version for easy soldering.

PLASTIC STUDS

To keep the printed circuit board in the EMI-shielding enclosure from making contact with the housing, it can be placed on plastic studs. We supply plastic studs in lengths of 3, 5, and 8mm. The diameter of the plastic studs can be 5 or 10mm. It is also possible to have studs made to your specifications.

Plastic studs are provided with a very strong adhesive sticker at both ends. One end is placed at the desired location in the housing and the other end on the PCB. The plastic studs can be delivered in black, white or blue.

ADVANTAGES

- Lightweight solution
- Available in any dimension
- Shielding close to the source
- Mounting afterwards is possible
- No gaskets required
- Extra shielding layer in combination with other barriers

TYPICAL APPLICATIONS

- Hand-held test and measurement devices
- Radio control equipment
- Wall-mounted monitoring systems
- Security devices
- Building control equipment

OPTIONS (ON REQUEST)

- With insulation layer in the housing part- no studs needed for the PCB
- Vents in the cover part for heat dissipation or cooling
- For additional reduction of radiation, it is possible to add EM absorbers to the EMI housing

SPECIFICATION

Color	Copper or silver (for tinned version)
Material	Mu-copper
Thickness	0.12 or 0.18mm

SHIELDED PCB HOUSING 1910

High performance shielded housing for PCB's. Big range of size available. Good shielding properties, optionally in addition with PCB- shields for shielding near to the source.

High performance shielded housing for PCB's. Big range of size available. Good shielding properties, optionally in addition with PCB- shields for shielding near to the source.

The metal box is made up out of two parts with a amucor inner layer. Easy excess for mounting a PCB. The PCB housing can be supplied with anti-vibration and shock mounting to protect the PCB.

The shielded enclosure is available in different sizes and with amucor or copper plated inside.

OPTIONS

- Cut-outs on top/bottom for ventilation openings, connectors, power supply, cables entries, switches, buttons and so on
- At interior, easy system to mount all size of PCB
- Holder for small electronics like mobile phone
- Can be supplied with EMI power- and or signal line filters (see Data- and power line-filters)

BENEFITS

- Quick open/close system
- Easy accesses components inside holder for small electronics like mobile phone
- Customizable outside with cut outs for data- and power lines
- Shielding properties up to 40dB

APPLICATIONS

- Protection PCB for radiance, vibration and shock.

***Notice**
Information supplied in these data sheets is based on independent and laboratory tests which Holland Shielding Systems BV, hereafter referred to as HSS believes to be reliable. HSS has no control over the design of customer's product which incorporates products, therefore it is the responsibility of the user to determine the suitability for his particular application and we recommend that the user make his own test to determine suitability.

The product described in this data sheet shall be of standard quality, however the products are sold without warranty of fitness for a particular purpose, either expressed or implied, except to the extent expressly stated on HSS invoice, quotation or order acknowledgment. HSS does not warrant that products described in this data sheet will be free of conflict with existing or future patents of third parties. All risks of lack of fitness, patent infringement and the like are assumed by the user.

XYZ SHIELDED ENCLOSURES 1920

Custom size EMI shielding enclosures,
for standard price and no tooling cost.

The XYZ EMI shielding housings 1920 series not just have a fresh new modern look but also shield very well. They can be supplied in any size within just a few days.

The shielded housing is made up of only two parts, however, when it is open, it is open on three sides of the housing. This makes assembly very easy.

It can be produced in 3mm thick aluminium or 2mm thick stainless steel (other thickness and materials on request).

For good electrical contact and easy opening of the housing there is made use of sophisticated snap-on fingers, bolts and/or locks which result in controlled accesses to the inside. The round corners gives the housing a friendly look and feel, but the housing is also rigid and molest-proof.

DATA- AND POWER LINE-FILTERS
This housing can be personalized with power line, USB, VGA, Flat cable etc.

- OPTIONS**
- The box can be fully personalized with your logo
 - Cutouts on all 6 sides for displays, ventilation panels, connectors, power-supply, cable entries, switches, buttons and so on
 - At the interior mounting holes, thread- spuds
 - Can be supplied with EMI power- and or signal line filters (see Data- and power line-filters)

- BENEFITS**
- Quick open/close system
 - Easy accesses components inside
 - Any not standard size in a few days
 - Plain / stylish design
 - Customization outside with cut outs for data- and power lines
 - Good shielding properties

- APPLICATIONS**
- Shielding of electronic components
 - Rigid, so very well for heavy duty military applications
 - Hand-held test and measurement devices
 - Radio control equipment
 - Wall-mounted monitoring systems
 - Security devices
 - Building control equipment

CLOSURE/OPTIONS

CLOSURE/OPTIONS
Custom sizes and shapes can be produced on request and according to your drawing. There are several options available for the closure options. For example if you want **A snap connection** with **G Shielded window** please mention **A, G**. Send your drawing to request a quote for a custom shape to info@hollandshielding.com.

DOUBLE EMI SHIELDED HOUSINGS 1950

High performance double-layer shielded enclosures, producible in any shape or size

These electronic enclosures are designed for applications requiring EMI/RFI shielding. The double walls provide excellent shielding performance in the range of 1 MHz- 20 GHz. The body is made of two sheets of 0.3mm Amucor with a solid polyethylene core.

Excellent attenuation is not the only feature of these EMC shielded enclosures. They also look quite attractive thanks to the brushed metal and anti-fingerprint coating.

For enclosure with sides longer than 600mm we make these housings or cabinets in a version that is 6mm thick, so the walls have sufficient stiffness.

BENEFITS

- High EMI shielding performance
- Construction provides strength and rigidity for heavy duty applications
- These EMI shielding enclosures look very nice and are fingerprint proof
- Can be delivered in any size and according to your drawing
- We have over 18.000 models in stock so the appropriate version for your application will always be available
- Low weight construction due to the high performance Amucor shield sandwich construction
- Also suitable for prototyping and small series (up to 1.000 pcs)
- Easily machined and modified to your particular requirements
- Superior surface
- Provides excellent durability in outdoor applications
- Approximately one half the weight of full metal EMI shielded housings on the market

OPTIONS

- Recessed areas can be provided for connectors, displays and switches
- The enclosures can be produced with your logo
- Version with hinged lid
- With vents or Honeycomb ventilation panel depending on the desired attenuation and the need for cooling

FLAMMABILITY CHARACTERISTICS

- Self extinguishing
- UL 94V-0
- Class 1 or Class A fire rating (ASTM E-84)

TECHNICAL SPECIFICATIONS

Wall thickness of the material	3mm (thicker on request)
Temperature resistance	-50 °C to +80 °C

QUOTATION

For a quotation please send us a drawing specifying the measurements and attenuation needed. For a realistic estimate please also mention the options the shielded housing should be provided with.

KNITTED WIRE MESH WASHERS & DISKS 1250

Universal EMC gasket to shield lower frequencies

The 1250 series are developed to seal the opening between the housing and the bold holes. They are often used in combination with an EMC gasket or are pre-assembled by us in gaskets such as the 1200 series knitted wire mesh gaskets.

APPLICATIONS

- Antenna seals
- Connector seals
- Cable glands

U-SHAPE EMI GASKET 7600

U-shaped gaskets for doors and other types of panels where a U-shape can be attached.

We have developed a U-shaped (U-channel) EMC gasket for doors and other types of panels where a U-shape can be attached. The U-channel (U-shape) permits opposing contact surfaces to enter the U-Channel opening while making three points of contact. For example for edge-mount applications.

The U-shaped gasket creates a positive seal between the bottom of a door or panel and its threshold to block out weather, light, sound, insects, and dust. At the same time it acts as an EMI gasket. It is easy to assemble by sticking it onto the edge of the door or panel with the self-adhesive strip.

OPTIONAL (ON REQUEST)

The U-shape can be made in different widths and heights per side. It is also possible to place a half rounding layer on top.

METAL KNIT GASKET 1200

Universal EMC gasket to shield lower frequencies

The Metal knit EMI/RFI shielding gaskets of the 1200 series consist of a layer of knitted electrically conductive metal wires on attached to a low-closure force rubber or elastomer core. For heavy-duty applications like EMP or high temperatures, a fully metal version is available. Sometimes a Metal knit EMI/RFI gasket is combined with an environmental seal to provide IP rating, depending on the materials used.

Knitted wire mesh gaskets provide a cost-effective solution to high shielding performance applications in the magnetic and electrical fields, including EMP. The gaskets can be made either completely from knitted metal mesh or from knitted metal mesh over an elastomer core which allows recovery after compression.

For high frequency shielding, foil-based gaskets like Amucor Shield 6800 series will perform better, because of their much larger contact surface.

SHIELDING PERFORMANCE*

■ Monel (H field)
■ Monel (E field + P field)
■ Aluminium (H field)
■ Aluminium (E field + P field)
■ TCS (H field)
■ TCS (E field + P field)
■ S/Steel (H field)
■ S/Steel (E field + P field)

BENEFITS

- High attenuation for lower frequencies (low-frequency magnetic shielding)
- Suitable for use under extreme conditions (military applications)
- Wear resistant
- Not susceptible to corrosion
- Various conductive materials against tension corrosion
- Roll lengths of 1 to 1000 meters (depending on width and height of the gasket)
- Tools required: pair of scissors

OPTIONS (ON REQUEST)

- Custom made in the dimensions specified
- Available with flame-retardant core
- Available with conductive self-adhesive
- Available with chemical-resistant rubbers like EPDM
- Silicone sponge for high temperatures up to 220 °C
- Cut into accurate lengths
- As a ready made frame

WITH WATER SEAL/IP SEAL

All knitted mesh EMI/RFI gaskets can be produced with a water seal/IP seal.

The standard material for the fluid seal/water seal is Neoprene which can be adhesive-backed (indicated in red in the drawings) for easy installation. Alternatively, silicone sponge is also available.

METAL KNIT GASKET VS. AMUCOR SHIELD

KNITTED WIRE MESH WASHERS & DISKS 1250

We can add 1250 series electrically conductive washers or disks to the Metal knit gasket. For this we do ask you to send a technical drawing with the right dimensions and position of the washers/disks.

every size can be made

AMUCOR SHIELD 6800

Amucor EMI shield is intended for panels and screwed applications

Amucor Shield 6800 is an affordable HF gasket which can be supplied in a wide range of dimensions. The gasket is very effective in combination with zinc-plated steel and aluminium constructions.

All EMI gaskets can be provided with a conductive or non-conductive self-adhesive strip.

The Amucor Shield 6800 series consists of a neoprene or PVC foam core covered with reinforced foil based on an Amucor alloy. This construction guarantees excellent shielding performance and is remarkably strong.

Special applications, different foam cores, conductive foils and fabrics are also available.

SHIELDING PERFORMANCE*

Shielding effectiveness depends on surface, shape of gaskets and materials used.

BENEFITS

- Self-adhesive EMC gasket
- Easy to fit, can be cut with scissors
- Good water resistance
- Gasket can be die-cut (screw holes)
- Roll lengths of 1 to 1000 meters (depending on the EMI gasket's width and height)
- High shielding performance
- Low closure force
- EXTREMELY STRONG
- Deflection 50%

OPTIONS

- Cut into accurate lengths
- Can be made die-cut or as a frame
- Combination with water seal
- UL94V-0 flame-retardant foam core
- Chemical resistant rubbers like EPDM
- Silicone sponge for high temperatures up to 220 °C
- Various conductive foils and fabrics
- With cutouts, so the gasket can be bent easily

MECHANICAL PROPERTIES

MINIATURE SHIELD 1400

Very small EMI / RFI shielding gasket used for PCB's, smart phones and other applications where there is little space available

This EMI/RFI gasket can be made so narrow that the height exceeds the width. Nevertheless, it provides sufficient electromagnetic damping.

The gasket is made of a highly electrically conductive foam with or without an electrically conductive self-adhesive strip on one side. The electrically conductive foam can be compressed up to more than 50 % of its original height.

The smallest width is 1mm and the maximum height is 6mm. Roll lengths of 1 to 1000 meters, depending on width and height of the EMI gasket.

APPLICATIONS

- Shielding on printed circuit board (PCB)
- EM, RF, LF, HF, EMI, RFI shielding
- Other products where there is very little space available and low compression force is required

OPTIONS

- EMI/RFI miniature gasket with water seal
- Resistant to high temperatures
- With cooling holes
- With or without self-adhesive
- Made from electrically conductive foam or electrically conductive rubber
- Electrically conductive rubber version for chemical resistance

CLIP-ON GASKET 6500

Clip-on EMI/RFI shielding gaskets with water seal. These gaskets are also known as trim gaskets or trim shield gaskets.

This easily mounted clip-on gasket is composed of two layers: a sponge rubber water seal, and an EMI-shielding side of highly conductive, wear-resistant metallized fabric. The gasket is very flexible due to the hollow rubber, ensuring a low closure force.

The gasket is assembled without tools, simply by manually pressing the section onto the metal flange of your enclosure. Different sizes are available on request. The gasket can be bent in either direction (it can not be bent into a right angle, but it can form a rounded corner with a very small radius). Temperature ranges from -40 to +110 °C. A flame retardant version (UL94 V0) is also available.

SHIELDING PERFORMANCE*

Shielding effectiveness depends on surface, shape of gasket and materials used.

TEMPERATURE RESISTANCE

An EPDM core with an operating temperature up to 100 °C and good resistance to UV, water, and acids make the clip-on shielding gaskets the right choice for outdoor applications.

APPLICATIONS

Special shapes and materials excel in dynamic or high cycling applications such as Faraday cage doors or access panels with low compression rates and very limited compression set.

AVAILABLE VERSIONS

The clip-on range comes in three flavors:

- Type W series (Clip-on shielding gasket with water seal)
- Type F series (Fully wrapped EMI/RFI-shielding gasket)
- Type H series (For heavy-duty applications, for example military)

STANDARD SHAPES

Part number 6580 : Big side clip-on gasket Part number 6585 : Small clip-on gasket Part number 6590 : Big clip-on gasket Part number 6595 : Side clip-on gasket

» **CLIP-ON GASKET 6500**

CONDUCTIVE FLEXIBLE EDGE PROTECTOR

The gasket is designed to slide easily over metal flanges to help reduce installation costs and is a good choice for retrofit applications.

APPLICATIONS

- Connecting plates
- ESD (static discharge)
- EMI shielding

BENEFITS

- Easy gasket installation
- Resistance to heat, humidity, salt fog, corrosion and rain

* The red line is an indication of the conductive layer.

CLIP-ON GASKET FULL METAL 6600

Clip-on EMI heavy duty gaskets, specifically designed for heavy-duty applications

CLIP-ON EMI GASKETS HEAVY-DUTY

The clip-on gasket heavy-duty is a flexible rubber tube with all-metal cladding. The large range of the clip makes it extremely easy to mount and it guarantees solid mechanical attachment of the EMI-shielding gasket without the use of adhesives.

The metal cladding is corrosion resistant and offers both excellent EMI shielding and electrical conductivity. The hollow rubber provides low closure force and good spring properties, making it ideal to use for EMI shielding, grounding and static discharge (ESD) or as an alternative for finger strips.

The clip-on gasket can bend up to 90 degrees and can be clipped on to plate material of between 0.5 and 3mm thick. It can be delivered in continuous lengths or short, pre-cut sections.

APPLICATIONS

- EMI / EMC shielding
- Static discharge (ESD) / grounding
- Electrical connections
- Doors / lids
- Medical / military
- General electronics

ADVANTAGES

- Non toxic
- Continuous length (up to 10 meters)
- High spring / compression range
- Extremely high shielding performance
- Superb electrical conductivity
- Easy to mount

TECHNICAL DATA

- Shielding effectiveness >100 dB (10 kHz- 22 GHz)
- Electrical resistance 0.004 Ohms / square cm
- Temp. range -40 to +100 °C
- Standard delivered in sections of 2 meters

P-SHAPED EMI SHIELDING PROFILE 7200

Conductive fabrics with Ni/Cu-layer over P-shaped sponge core (elastomer core)

7200 series P-shape EMI shielding gaskets consists of a P-shaped closed cell foam core which is covered with a conductive fabric with a copper-nickel metal coating (material code T) or highly conductive Amucor foil (material code A).

P-shape EMI shielding gasket comes with a self-adhesive strip for easy mounting.

The version with highly conductive Amucor foil (material code A) is designed especially to be combined with aluminium and zinc-plated steel.

Our 7200 series P-shape EMI shielding gaskets continuous strip gaskets have excellent shielding effectiveness (SE), high durability, low compression set and low resistance.

STANDARD SIZES

Below is a table of standard sizes that are nearly always in stock. Other sizes can all be produced on request.

Part number	Height (mm)	Width (mm)
7238	3	8
7248	4	8
72410	4	10
72412	4	12
72610	6	10
72612	6	12
72614	6	14
72812	8	12
72814	8	14
72816	8	16
72xx	Custom	Custom

APPLICATIONS

- Displays
- Metal housings
- Switching cabinets
- Depending on the application an IP54 protection class could be reached, that means by the use of the shielding gasket a protection against dust (index 5) and protection against splashed water (index 4) could be offered

CHARACTERISTICS

Conductive fabrics with Ni/Cu-layer. A PU sponge core (elastomer) covered with electro conductive fabric

- Shielding effectiveness: > 85dB attenuation from 20 MHz to 10 GHz
- Electrical Resistance: < 0.1 Ohms/Sq
- Compression Deflection: < 1 lb/in
- Compression Set: 15-19%
 - 15% at 21 °C (70 °F)
 - 19% at 70 °C (158 °F)
- Service Temperature -40 °C (-40 °F) to 70 °C (158 °F)

STANDARD SHIELD 7000

Standard Shield 7000 series is an economical HF (High Frequency) EMI shielding gasket which can be supplied in a wide range of dimensions. It is very effective in combination with stainless steel, copper and chrome-plated constructions.

Our 7000 series Standard shield EMI gaskets can be provided with a conductive or a non-conductive self-adhesive strip on the back for easy assembly.

Standard shield consists of a foam core covered with highly electrically conductive textile. The following foam cores can be chosen:

- Neoprene foam core (**foam code N**)
- EPDM foam core (**foam code E**)
- Low closure force PVC foam (**foam code P**)
- Flame retardant UL94V-0 foam (**foam code F**)

For smaller widths than 3mm we suggest to use the conductive adhesive (**code 03**). This guarantees excellent EMI / RFI shielding performance.

Please note: For special applications, different foam cores, conductive foils and fabrics are available on request.

BENEFITS

- Self-adhesive EMC gasket
- Easy to fit, can be cut with scissors
- Gasket can be die-cut (screw-holes, bites for easy bending etc...)
- Roll length of 1 until 1000 meters (Depending on width and height of the EMI gasket)
- High EMI/RFI shielding performance
- Low closure force
- EXTREMELY STRONG
- Deflection 50%

OPTIONS

- CNC cut into specific lengths
- Can be made into any shape or as a frame (according CAD drawing)
- Combination with water seal
- UL94V-0 flame retardant foam core (**foam code F**)
- Chemical resistant rubbers like EPDM
- Silicone sponge for high temperatures up to 220 °C
- Different conductive foils and fabrics
- With cut-outs so that the gasket can be easily bend

TAPE SPECIFICATION

- 01** Standard self-adhesive placed in the middle
- 02** Without self-adhesive
- 03** With conductive self-adhesive (only recommended on small sizes)
- 06** Standard self-adhesive, asymmetrical
- 07** Standard self-adhesive placed on the side

FOAM SPECIFICATION

- N** Standard Neoprene Foam
- E** EPDM foam core
- P** Low closure force PVC Foam, slow recovery
- F** Flame retardant Foam (UL94V-0)

ULTRA SOFT SHIELD 7400

Ultra-soft EMI shielding gasket for doors, panels and lids.
Very low closure force to prevent deflection.

Ultra soft shield 7400 series is an HF-shielding gasket with high shielding performance and extremely low closure force. This prevents deflection of doors/parts, which improves shielding effectiveness. The product works very well in combination with stainless steel and other metals.

The core consists of high-grade polyurethane foam with a maximum compression of 80%, which distinguishes Ultra soft shield 7400 from other commonly used shielding materials.

Ultra soft shield 7400 is covered with a highly conductive, wear & tear resistant, metallized fabric.

Different foam cores and conductive foils/fabrics are available for special applications.

OPTIONS (ON REQUEST)

- Aspire cut into accurate lengths
- Ultra soft shield 7400 series combined with a water seal (see our Ultra soft twin shield 7800 series)
- With UL94V-0 flame-retardant foam core
- With chemical-resistant rubbers like EPDM
- With silicone-sponge core for high temperatures up to 220 °C
- Different conductive foils and fabrics
- Bites or shapes cut out for easy application or bends, possible according to customer drawing

BENEFITS

- Gasket can be compressed up to 80%
- Very low closure force
- Very high electrical conductivity
- High shielding performance
- Roll lengths of 1 to 1000 meters, depending on width and height of the EMI gasket
- Easy to fit with self-adhesive
- High abrasion resistance
- Can be cut with a pair of scissors
- Because the Ultra soft shield 7400 series is so soft, it is easy to bend it around corners

TAPE SPECIFICATION

- **01** Standard self-adhesive placed in the middle
- **02** Without self-adhesive
- **03** With conductive self-adhesive
- **06** Standard self-adhesive, asymmetrical

FOAM SPECIFICATION

- **P** Standard polyurethane foam
- **F** Flame retardant UL94V-0 foam

» **ULTRA SOFT SHIELD 7400**

HIGH DEFLECTION VERSION

We have developed a combination gasket for an extremely high spring range. These gaskets are developed for applications where a high deflection and a high spring range is required. To give you an example. A 26mm high deflection gasket can be compressed up to 7mm without overly exerting excessive force. That is 70% compression at low force.

FRAME GASKET (EMC) 8100

For EMI shielding of panels and screwed applications like displays, windows, and honeycomb vents

The 8100 Frame gaskets series are ready-made gaskets according to customer specifications. They have reinforced corner pieces to guarantee optimum shielding performance and easy mounting characteristics.

The base material is Amucor-shield 6800 series, Standard shield 7000 series or Ultra soft shield 7400 series.

The gasket can be produced with or without self-adhesive. When the gasket has little contact surface we recommend providing the gasket with an electrically conductive self-adhesive.

COMPRESSION STOPS (OPTIONAL)

Disc or washer-type compression stops can be included to prevent over compression.

Washer type
Used at bolt holes

Disk type
Used next to bolt holes

BENEFITS

- Easy mounting
- High shielding performance
- No tools required
- Dimensions up to 2 x 2 m
- Can be supplied with self-adhesive

ENDLESS GASKET (EMC/IP) 8000

Combined EMI-shielding and water-seal gasket for grooves and door/lid constructions

The 8000 series Endless gaskets are ready-made gaskets according to customer specifications. They are suitable for many applications in which both an EMI-shielding gasket and a water seal are required.

The 8000 series Endless gasket consists of a rectangular EMI gasket like Amucor shield 6800 series, Standard shield 7000 series or Ultra soft shield 7400 series, combined with a closed-cell water seal.

All gaskets can be provided with a self-adhesive strip for easy mounting. Gasket materials for the 8000 series Endless gaskets are watertight at 30% compression, depending on the construction.

COMPRESSION STOPS (OPTIONAL)

Disc or washer-type compression stops can be included to prevent over-compression.

Washer type
Used at bolt holes

Disk type
Used next to bolt holes

IP SEAL POSITION

The gasket can be supplied with the water sealing/IP seal on the outside of the gasket (IP seal position O), or with the water seal at the inner side of the gasket (IP seal position I).

OPTIONS

- UL94V-0 flame-retardant foam core
- Chemical-resistant rubbers like EPDM
- Silicone sponge for high temperatures up to 220 °C
- Available in conductive textile, Amucor or Knitted wire mesh versions

BENEFITS

- Easy mounting
- High shielding performance
- No tools required
- Dimensions up to 2 x 2 m

V-SHAPE GASKET 8700

V-shape EMI/RFI shielding gaskets for applications between lids, hinges and locks, and between door and door frame

V-shape EMI/RFI shielding gaskets for applications between lids, hinges and locks, and between door and door frame.

The V-shape gaskets 8700 series are characterized by a very large compression range and low closure force. They come with a self-adhesive strip for easy mounting. The most common version is with conductive nickel over copper textile (**Material code T**).

The version with highly conductive Amucor foil (**Material code A**) is designed especially to be combined with aluminium and zinc-plated steel. To prevent loss of material and for easy shipping we cut the material to exact lengths. The longest length available is 2.5 meters.

V-shape gaskets are also available with a resilient foam rubber insert for more compression just at the moment of closing.

The V-shape gasket 8700 series is flame retardant and can be supplied in a UL94V-0 compliant version. Excellent shielding can be achieved without any permanent closure force. This construction prevents bending of doors, so the enclosure can be less rigid. It is also suitable for hinges and locks.

BENEFITS

- Easy to fit with self-adhesive
- Allows for large tolerances
- High EMI/RFI shielding performance
- Very high deflection
- Very low closure force
- Lengths of 5mm up to 2500mm
- Only scissors required for installation

OPTIONS (ON REQUEST)

- Cut into accurate lengths
- Different conductive foils and fabrics

» V-SHAPE GASKET 8700

SHIELDING PERFORMANCE*

To place the v-shape in a curve, we recommend that the surface is clean, smooth and dust free.

CUSTOMIZED EMC GASKET 8800

High deflection, low closure force gaskets without tooling costs. Any shape or size you want!

A CNC extrusion system has been developed to manufacture EMI shielding gaskets in a wide range of shapes and dimensions. Thanks to this system there are no additional tooling costs, which makes it interesting for smaller quantities or special constructions. The metal-cladded, flame-retardant gasket can be manufactured in several rigidities and is very compatible with aluminium, zinc-plated steel, AluZinc, stainless steel, copper, etc.

Enclosures can be constructed more cost-effectively and compactly due to the (electrically conductive) self-adhesive strips that eliminate the need for mounting equipment. The material is non-toxic and is an excellent replacement for the environmentally polluting beryllium gaskets.

Available in dimensions from 1.7- 30mm, with or without separate water seal, the gaskets can be supplied in various lengths, according to customer specifications.

Standard shapes are available for 19" racks, watertight enclosures and PCB shielding.

BENEFITS

- No tooling costs
- A wide range of shapes
- Self-adhesive gasket
- Easy to fit
- Small dimensions
- Very high deflection
- Low closure force

OPTIONS

- Cut into accurate lengths
- Combination with water seal
- UL94V-0 compliant, flame retardant
- Chemical resistant versions
- Resistant to high temperatures
- Various conductive foils and fabrics

CLIP-ON MOUNTING FINGERSTRIPS 2100

This series is designed for use where high temperature or other design considerations preclude the use of adhesive-mounted gasketing. These Fingerstrips provide the same shielding characteristics and effectiveness as the 2300 series Stick-on mounting Fingerstrips.

2100 series Clip-on mounting fingerstrips offer shielding effectiveness >100dB for 100 MHz plane wave. The contact edge of this Fingerstrip series expands. The Fingerstrip has a low to high deflection (see technical drawings). For applications where a small dynamic range is required and a spring clip mounting is preferred. Fingerstrips from this series are easy to mount by simply Clip-on or clip over the edge where it is to be attached through pressing / sliding.

SNAP-ON MOUNTING FINGERSTRIP 2200

Snap-on fingerstrip gaskets can be attached on tracks or rails, or through holes or slots in your construction

These Snap-on fingerstrips have very low compression force and almost no friction when compressed. They are excellent for "sliding" applications. The symmetrical design allows two-way contact. Very convenient for ESD grounding and RFI/EMI shielding of:

- Front panel handles
- Doors in shielded housings
- Panels in shielded enclosures
- Covers of shielded enclosures
- Sliding trays
- Assembly of plug-in units
- Back planes
- And other electronic enclosure applications

INSTALLATION IS SIMPLE

- Press and hold the edge of the fingerstrip gasket in one of the grooves
- Push in the direction of the second groove until the fingerstrip snaps into the second groove

NOTE: For some fingerstrips. Special Snap-on fingerstrips tracks are available for mounting.

MOUNTING EXAMPLES

Ideally suited for applications where lids or doors (think of doors for a Faraday cage or EMI shielded enclosure) are repeatedly opened and closed.

This type fingerstrip is also widely used in 19" racks, communication cabinets, communication cabinets, EMI/RFI shielded enclosures. The 2200 Snap-on Fingerstrips mounting series profiles can be used for earthing or electric connection.

STICK-ON MOUNTING
FINGERSTRIP 2300

Stick-on mounting finger stock gaskets with pressure sensitive adhesive (PSA) are suitable for low-profile, bi-directional applications and gaps from 0 to 3 mm

Stick-on mounting finger stock gaskets with pressure-sensitive adhesive (PSA) are suitable for low-profile, bi-directional applications like rack mounting of line-cards in telecommunications equipment.

These gaskets offer high EMI-shielding performance in applications where space may be limited. Stick-on mounting fingerstrips are low-compression, adhesive-mounted beryllium-copper shielding strips. The self-adhesive tape makes mounting easy and secure.

The product described in this data sheet shall be of standard quality, however the products are sold without warranty of fitness for a particular purpose, either expressed or implied, except to the extent expressly stated on HSS invoice, quotation or order acknowledgment. HSS does not warrant that products described in this data sheet will be free of conflict with existing or future patents of third parties. All risks of lack of fitness, patent infringement and the like are assumed by the user.

TWISTED FINGERSTRIPS 2400

These fingerstrips are electronic gaskets for general EMI-shielding applications where there is a narrow opening or gap

COMBINATION WITH ENVIRONMENTAL RUBBER GASKET (ON REQUEST)

As an option, the 2400 series Twisted finger stock gasket can be combined with a environmental rubber gasket. This offers a high degree of protection against dust and moisture.

ANGLE FINGERSTRIPS 2500

Beryllium copper (BeCu) finger-stock (fingerstrips, finger stock, contact strips, contact rings) gaskets for 90° EMI shielding requirements. The Angle fingerstrip series of RFI EMI shielding products is ideal for 90° applications where mounting to the surface perpendicular to the finger compression area is required.

CIRCULAR FINGERS 2600

Used for grounding and EMI shielding in high-frequency equipment

Circular fingerstrips are used for grounding and EMI shielding in high-frequency equipment and for forming large diameter round contacts rings. Circular fingerstrips are used to solve grounding en EMI shielding problems were round contacts and a dynamic range is required.

CONTACT FINGERS 2700

Contact fingers for Faraday cage doors
and lids for shielded enclosures

The Fingerstrips are very easy to bend and are therefore suitable for round and very dynamic contacts. These contact strips have a very dynamic spring range.

PCB CONTACT FINGERS 2900

Surface mount spring contacts are now available in different sizes, ranging from 1.7mm to 7.25mm

The contact fingers are applicable to make vertical or horizontal contact. You can order the fingers in different sizes and are designed for whipping and sliding applications. The use of the contact fingers are as example for shielding, grounding and general electrical connections applications and ideal to use for surface mount PCB's. The fingers are also known as Grounding / EMI/ RFI contacts, spring or Shield Finger.

The PCB contacts are ideal for automatic placement and can be delivered on Tape and Reel packing. When the contacts are mounted in a row they can provide excellent RFI shielding connection for metal doors or other cabinet enclosures. However, we can better advise our beryllium copper fingerstrips.

2901-01

Contact Gender	Male/Plug
Connector Orientation	Vertical
Current Rating	4A

CONDUCTIVE RUBBER PROFILES 5750-P

Electrically conductive rubber profiles in general are known for its excellent weather, oxidation and ozone resistance

The rubber in these profiles is made conductive by means of small conductive metal particles, distributed throughout the rubber. It can provide an EMI-proof and a pressure watertight seal in narrow constructions.

Electrically conductive rubbers are typically used for EMI applications. Also used for EMP protection, wave-guide applications and against static electricity. The rubber can be filled with silver, nickel, silvered glass, silvered aluminium or graphite (only for ESD). Commercial EMI applications often call for **Nickel-Graphite Conductive Rubber (Part number 5760)** or **Graphite Conductive Rubber (Part number 5755)** due to costs, whereas military and aerospace applications often call for **Silver Aluminium Silicone Conductive Rubber (Part number 5750)** to meet Mil-G-83528C specifications. In military or aerospace, fluorosilicone versions may also be used for its chemical and fuel resistance.

As the material shields high frequencies, electrically conductive rubber shows a shielding effect of 60 dB at 30MHz ~ 10GHz. Due to its excellent conductivity, grounding and EMI shielding effect, it is well suited for military communication equipment. The rubber can be manufactured in various shapes such as sheets, molded parts, die-cut, strips, o-rings, etc.

BENEFITS

- Excellent conductivity throughout the surface
- Excellent electromagnetic shielding effect
- Easy die-cutting, kiss-cutting and slitting
- Temperature range -60 to +185°C (under certain circumstances, tolerance can be up to 220°C)

SHIELDING PERFORMANCE*

HIGH TEMPERATURE RESISTANT EMI GASKET 7100

Same as the 7100 series Standard Shield gaskets but then resistant up to peak temperatures of 180 °C

This series is a HF shielding gasket with high shielding performance and extremely low closure force. This prevents deflection of doors/parts, which improves shielding effectiveness. It is very effective in combination with stainless steel and metals.

The core consists of a high-grade FUBA foam which is an EPDM foam covered with high conductive wear & tear resistant metallized fabric. This EMI gasket is used in large scale in automotive production up to 125 °C.

FUBA FOAM GENERAL DESCRIPTION

FUBA foam is a semi-closed cell EPDM foam with excellent sealing properties. The semi-closed cell structure combines the flexibility of open cell types with the excellent sealing capabilities of closed cell types (after compression). This unique foam can be laminated with advanced adhesive technology to seal (complex) gaps against water, wind, dust, noise and heat.

FUBA FOAM CHARACTERISTICS

Good resistance to UV, humidity, high and low temperatures and chemicals (such as acids and alkalis). The flexibility of the foam makes sure that the optimal sealing performance is obtained, even with expansion or contraction of the structure caused by temperature changes. Thanks to the low compression load the foam will never deform the structure after application.

Combined with advanced adhesive technology, the foam can be applied on greasy, rough, smooth, and low energy surfaces. No heavy metals (such as cadmium) or regulated substances (such as CFC's and halogen gases) are used during the manufacturing process nor in the product itself. FUBA foam can be disposed of by incineration.

FEATURES

- Semi-closed cell structure
- Good UV resistance
- Good weather-ability
- Low compression load
- Very high electrical conductivity
- High shielding performance
- Roll length of 1 until 1000 meters. (Depending on width and height of the EMI gasket)
- Easy to fit with self-adhesive
- High abrasion resistance
- Can be cut wit a pair of scissors
- Because the FUBA foam series is so soft, it is easy to bend around corners

APPLICATION

FUBA foam gaskets are especially designed to seal (complex) gaps against electrical noise and heat. Depending on the applications, the EMI gasket needs to be compressed between 50-80% to activate its sealing properties. Automotive- sealing of HVAC unit, dashboard, air duct, glass run, fire wall. Building and construction- sealing of exterior panel joints, solar panels. Industrial- sealing of air-conditioners, mobile phones, refrigerators.

POWER SUPPLY GASKET 7150

Gasket with a copper strip on the inside to guide higher currents. Can be used for example, heated window

Standard EMC gaskets are not made for conducting higher currents but for EMC applications and static discharge. For higher currents through an EMC gasket we have developed the 7150 series Power supply gasket.

An extra mu-copper strip is used in this adapted standard shielding, which ensures that a higher conductivity of current is possible.

The gasket is provided with an mu-copper contact strip in order to make contact with the power supply. Optionally, the gasket can be supplied with soldered wire for easy connection.

The Power supply gasket is delivered in your specified length.

DIE-CUT GASKET 8300

Gasket die-cut according to the client out of various materials, for example: silicone gasket, monel gasket, conductive rubber, conductive foam, neoprene

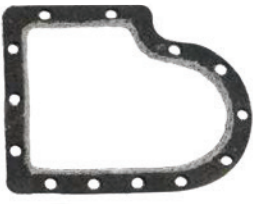

COMBINER IP-EMC SEAL

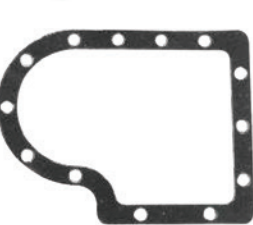

Gaskets made out of conductive rubber are quite expensive and are also usually less soft than needed for the application. Due to excessive stiffness, the door or lid of the electronics housing will become warped or bent, which then causes electromagnetic leakage. Therefore we have developed gaskets which provide the same functionality while being significantly softer. Gasket size can be up to 2 x 3 meter and even bigger on request. Some examples are listed below.

- Self-adhesive neoprene gasket with knitted mesh inside
- Very small gasket with inserts of conductive foam
- Small gasket with insert of conductive, hollow, round rubber profile

- Flash-cut gasket with knitted mesh

- Flash-cut gasket

- Neoprene edge around a core of conductive foam

- Die-cut gasket from profile (embossed Amucor foil)

- Round closed-cell neoprene gasket with soft conductive foam inside

- Neoprene gasket with conductive-rubber hollow O-ring profile

- Silicone foam gasket with mesh foil inside

- Fabric over foam-gasket profile with asymmetric tape

- EMC/IP gaskets 7300 series (Amucor version) with cutouts for easy bending

- EMC/IP gaskets 7300 series with holes cut according to customer's drawing and with uninterrupted water seal

- Standard shield 7000 series with cutouts for easy bending

EMC-IP GASKET 7300

Water sealing EMI gaskets for screwed applications like panels, displays, and windows

The 7300 series EMC / IP gaskets are cost-effective combinations of an EMI shielding gasket and a water seal. This type of gasket comes with a self-adhesive strip.

The gasket consists of two neoprene foam cores, one of which is covered with reinforced foil, based on the high performance Amucor alloy. Amucor is highly compatible with aluminium and zinc-plated steel. If the gasket is intended to be in contact with alochrom or stainless steel, we recommend using highly conductive textile in stead of Amucor. The two parts can be bent independently from one another to guarantee optimal shielding and sealing performance. Sharp inner corners can be made easily, without interrupting the water seal. For special applications we can offer different foam cores, conductive foils and fabrics.

CONSTRUCTION

BENEFITS

- Bends easily around sharp corners without interrupting the water seal
- Excellent water sealing up to IP65 (depending on construction)

The 7300 EMC / IP gasket can also be produced in a circle shape. The water-seal can be either on the outside or the inside of the gasket

COMPRESSION STOPS (OPTIONAL)

Disc or washer-type compression stops can be included to prevent over compression.

» EMC-IP GASKET 7300

SHIELDING PERFORMANCE*

Shielding effectiveness depends on surface, shape of the gasket and materials used.

L-SHAPE GASKETS 7500

L-shaped EMI/RFI-shielding gasket with water seal (IP seal) for thin doors and lids

The L-shaped gasket as an efficient combined seal for doors and lids. The gasket is used to achieve two goals at the same time: a water seal and an EMI seal.

This L-shaped gasket is made from a solid piece of neoprene foam. One side has been laminated with conductive textile (the conductive side) and the other side is uncovered neoprene which provides a water seal.

The flange of the door will compress the water-seal side of the gasket with very little force to assure a watertight seal.

The electrically conductive part on the other side of the gasket establishes an electrical connection between the lid and housing

TECHNICAL DRAWING

BENEFITS

- Bends easily around sharp corners without interrupting the water seal
- Excellent water sealing up to IP65 (depending on construction)
- Easily mounted with a self-adhesive strip
- Easy to use for small doors and lids
- Low closure force to prevent bending of doors and lids
- Roll lengths of 1 to 1.000 meters, depending on width and height of the gasket
- Tools required: a pair of scissors

OPTIONS (ON REQUEST)

- Custom made in the dimensions you need
- Available in flame-retardant version
- Available with conductive self-adhesive
- Available with chemical-resistant rubbers like EPDM
- Silicone sponge for high temperatures up to 220 °C
- Various conductive foils and fabrics
- Cut into accurate lengths
- In the shape of a ready-made frame

ULTRA SOFT TWIN SHIELD 7800

EMI/RFI shielding gasket with low closure force to prevent bending of doors, lids and panels combined with a environmental seal (dust/waterseal)

Ultra soft twin shield 7800 series is a range of HF gaskets similar to our Ultra soft shield 7400, which have been combined with an environmental seal (also known as water seal) made of closed-cell foam rubber. The product requires very low closure force. All gaskets are provided with a self-adhesive strip on the side of the water seal.

The standard material for the water seal is neoprene foam. Alternatively a slowly recovering PVC foam is available, which is fully watertight at 30% compression.

The ultra soft twin shield is easy to bend so that the water seal is not interrupted.

SHIELDING PERFORMANCE*

BENEFITS

- Deflection up to 80%
- Very low closure force
- Very high electrical conductivity
- High shielding performance
- Roll lengths of 1 to 1000 meters, depending on width and height of the gasket
- Easy to fit, self-adhesive
- High abrasion resistance
- Tools required: a pair of scissors

OPTIONS

- Cut into accurate lengths
- UL94V-0 flame-retardant foam core
- Chemical-resistant rubbers like EPDM
- Silicone sponge for high temperatures up to 220 °C
- Different conductive foils and fabrics

O-PROFILES 7900

For EMI shielding applications in grooves

Several types of O-profiles have been developed for different applications, each with its own advantages. O-profiles were originally designed for high-performance shielding, mainly for military applications. They are used when environmental sealing and EMI screening are required, and where there is not much space.

Four kinds of extrusion types are available: **1: hollow**, **2: solid**, **3: Cell Rubber** and **4: rectangular**. These extrusion cores can be covered with metallized fabric foil or they can be made out of conductive rubber. For optimal shielding performance a compression of 5-10% is recommended for solid elastomer's and 10-50% for hollow extrusions and sponge rubbers.

COMPRESSION

Solid elastomer's cannot be compressed much. They are easily deformed but the volume does not change as would be the case with sponge elastomer (PVC, EPDM, Neoprene) so that allowance for material flow must be considered in the groove design.

BENEFITS

- Easy to fit into grooves
- Deflection up to 50%
- Low closure force

OPTIONS (ON REQUEST)

- Cut into accurate lengths or endless O-rings
- Drop-out prevention fixtures
- UL94V-0 flame-retardant version
- High temperature-resistant Silicone core (up to 220 °C)
- Fluorosilicone (silver aluminium, silver copper, nickel, nickel graphite) for applications with chemicals

The figure below shows two different groove designs. On the left there is a typical rectangular groove, while the design on the right can mechanically retain circular cross-section gaskets by side friction.

MATERIAL OPTIONS

7900 series Conductive O-profiles can be delivered in the following materials:

Material options			
Type	Code	Core	Cover
7900-x-1-1-x	1-1	Neoprene	Amucor foil
7900-x-1-2-x	1-2	Neoprene	Conductive fabric
7900-x-2-1-x	2-1	Silicone	Amucor foil
7900-x-2-2-x	2-2	Silicone	Conductive fabric
7900-x-3-1-x	3-1	PVC	Amucor foil
7900-x-3-2-x	3-2	PVC	Conductive fabric
7900-x-4-1-x	4-1	EPDM	Amucor foil
7900-x-4-2-x	4-2	EPDM	Conductive fabric
7900-x-5-3-x	5-3	Silvered particles filled silicone rubber	-
7900-x-5-4-x	5-4	Nickel filled silicone rubber	-
7900-x-5-5-x	5-5	Graphite filled silicone rubber	-

X needs to be replaced for extrusion type & dimensions

SPECIAL MATERIALS (ON REQUEST)

These O-profiles are also available in special materials for special applications for example applications with chemicals. Below is a list of special materials. For availability and delivery please email info@hollandshielding.com.

- Silicone Carbon
- Fluorosilicone Nickel Graphite
- Silicone Nickel Graphite Flame Retardant
- Silicone Silver Aluminium
- Fluorosilicone Silver Aluminium
- Fluorosilicone Nickel
- Silver Plated Nickel
- Silver Glass

CONDUCTIVE O-RINGS 7910

For EMI shielding applications in grooves.
Also suitable where IP seal is required.

The 7910 series Jointed O-ring are practically the same as the 7900 series O-Profiles, however, this is a turnkey closed O-ring. They are used where environmental and EMI screening is required but were little space is available. Four kinds of cores are available in the following shapes:

- Solid
- Hollow extrusion,
- Cell rubber
- Small rectangular

These cores can be covered with metallized fabric foils or made out of conductive rubber. For optimal shielding performance a compression of 5-10% is recommended for solid elastomers and 10-50% for hollow extrusions and cell rubbers.

ULTRA SOFT CONDUCTIVE RUBBER 5200

Very soft conductive Rubber for medical, military and automotive industries, where less closure force is required

Standard electrically conductive rubbers are generally not soft enough. As a result, a lot of tension is placed on the seal when tightening the housing or the lid.

For applications where no extreme force is allowed, we have developed ultra-soft conductive rubber.

The material is used in medical, military and automotive industries and even in commercial products requiring EMI suppression, grounding, or static discharge. It is very suitable for applications where an environmental or watertight seal is required and less closure force is required.

The 5200 ultra soft conductive rubber can be ordered in different thicknesses. We apply several layers of the rubber to get the right thickness.

Standard thickness of the 5200 are **1.0, 1.5, 2.0, 2.2, 3.0, 3.5 and 5.0mm**. Other thicknesses on request.

SPECIFICATIONS

- Shore: A 20
- Color: dark red
- Temperatures up to 220 °C
- High shielding performance
- Water sealing up to 10 meters
- Pressure resistant
- Salt spray / chemical resistant
- Supplied as sheets, strips or die-cuts

APPLICATIONS

- Conductive seal for medical or military devices
- Pressure sensitive sensors
- Watertight seal between housing and lid with less closure force

CUSTOM SHAPE/SIZE

Ultra soft conductive rubber can be cut very precise according your CAD drawing. To make an quotation, we ask you to send a drawing with the desired specifications to info@hollandshielding.com or use the form below to submit your drawing.

ORDER EXAMPLE

Series	Thickness (mm)	Width (mm)

WASHER, CYLINDER AND SPRINGS 5500

Materials are used for grounding, contact point water tight rings or flexible springs. These can be used to contact PCB to housing.

Standard Nickel-graphite conductive rubber are used for EMI applications. The rubber is made conductive by incorporating small conductive metal particles throughout the material. It can provide an EMI-proof and watertight seal in narrow constructions. But they are also useful for EMP protection, wave-guide applications and against static electricity.

When in need of high deflection and low closure force we make conductive foams. The material will return to almost its original height when released. The foam is covered with a layer of conductive polyurethane to protect it from environmental influences and to prevent burrs when cutting. Its conductivity is excellent in all directions (X, Y, and Z). Conductive foam is fire retardant as well as RoHS compliant.

TECHNICAL DATA

Item	Data
Thickness (mm)	1, 2, 2.2 or 3.4 (other sizes on request)
Color	Grey
Adhesive strength (gf/25mm)	>1.000
Holding strength (sec)	>3.600
Surface resistance (Ω/sq)	0.2
Surface resistance (Ω/in)	1.0 max
Volume resistance (Ω/sq)	0.2
Top-bottom resistance (Ω/in)	1.0 max
RoHS	Compliant
Fire retardant (cm/min)	Pass

BENEFITS

- Any size in a few day's
- Custom parts
- Small packing of 10 pieces each
- High temperature up to 220 °C
- Easy to mount
- Water tight constructions
- High deflection foam

OPTIONS

- Available in different thicknesses
- Low compression force
- Rubber with silver particles

TEMPERATURE RESISTANCE

Temperature resistance depends on the core material of the metal knit EMI/RFI gasket; ranges from -60 °C up to 220 °C are possible. These Metal knit EMI/RFI gaskets are insensitive to external influences and can withstand harsh conditions very well.

ORIENTED WIRE SHIELD
5711 - 5722

Silicone sheet material with oriented wires for EMI shielding and IP sealing. Can be cut into complicated shapes by CNC knife cutting, laser cutting and/or water jet cutting, or die-cut

Oriented wire shield 5711- 5722 is a composite gasket material consisting of a large number of small wires embedded and bonded in solid or sponge silicone, or fluorosilicone elastomer for oil resistance.

The wires provide excellent conductivity to establish EMI / RFI shielding.

The material is used in military, industrial and commercial products requiring EMI suppression, grounding, or static discharge. It is very suitable for applications where an environmental or pressure seal is required.

The sponge version is used in cases where the severe joint is uneven, or if lower closure forces or greater compressibility are required.

TECHNICAL DRAWING

PART NUMBERS

Material	Part number
Solid silicone with monel wire	5711
Solid silicone with aluminium wire	5712
Solid fluorosilicone with monel wire	5713
Sponge silicone with monel wire	5721
Sponge silicone with aluminium wire	5722

DIMENSIONS

We produce sheets of 150 x 900mm, from which we can then cut gaskets without interruptions. Bigger gaskets can be welded/ joined together in order to prevent waste of material.

Custom compositions are available on request, simply by sending a drawing with the desired dimensions to our email address info@hollandshielding.com.

BENEFITS

- Temperatures up to 220 °C
- High shielding performance
- Water sealing up to 10 meters
- Pressure resistant
- Salt spray / chemical resistant
- Fluorosilicone rubber for fuel/oil resistance
- Supplied as sheets, strips or die-cuts

SHIELDING PERFORMANCE* (DB)

Please note : These values are measured under laboratory conditions. Results may vary in other situations, please read our Guarantee.

CONDUCTIVE RUBBER SHEETS 5750-S

In EMI shielding, this rubber in particular is used as a medium to provide electrical conductivity across a gasket-flange interface

The rubber is made conductive by incorporating small conductive metal particles throughout the material. It can provide an EMI-proof and watertight seal in narrow constructions.

Electrically conductive rubbers are typically used for EMI applications. But they are also useful for EMP protection, wave-guide applications and against static electricity. The rubber can be filled with silver, nickel, silvered glass, silvered aluminium, or graphite (only for ESD). Commercial EMI applications often choose **Nickel-graphite conductive rubber (Part number 5760)** or **Graphite conductive rubber (Part number 5755)** from a costs point of view, while military and aerospace applications often call for **Silver copper silicone conductive rubber (Part number 5750)** to meet Mil-G-83528C specifications. In military or aerospace, fluorosilicone versions may also be used due to their chemical and fuel resistance.

As the material shields high frequencies, electrically conductive rubber shows a shielding effect of 60 dB at 30MHz ~ 10GHz. Due to its excellent conductivity, grounding, and EMI shielding effect, it is well suited for military communications equipment. The rubber can be manufactured in various shapes such as sheets, molded parts, die-cut, strips, o-rings, etc.

CONDUCTIVE ADHESIVE INFORMATION (CONDUCTIVE PSA)

Property	Unit	Outcome	Test method
Surface resistance	Ω/sq	<0.10	MIL-DTL-83528C
Adhesive strength	G/25mm	850	ASTM D 3330
Conductive PSA	-	Acrylic + Ni	-
Liner	-	Paper, Film	-

* Please note: Conductive adhesive is optional. By default, these Conductive rubber gaskets are supplied without adhesive.

BENEFITS

- Excellent conductivity on the entire surface
- Excellent electromagnetic shielding effect
- Easy die-cutting, kiss-cutting and slitting
- Temperature ranges of -60 to +185°C (under certain circumstances, tolerance can be up to 220°C)

SHIELDING PERFORMANCE*

WHAT QUESTIONS NEED TO BE ANSWERED TO SELECT THE RIGHT MATERIAL?

- What is the approximate shielding effectiveness you need to achieve for your application?
- What environment will this material be exposed to? Does the rubber need to be solvent or fuel resistant (fluorosilicone)?
- Are you looking for a semi-conductive/static dissipating material or is this a true EMI/RFI shielding application?

HOW DOES THE CONDUCTIVE FILLER MATERIAL IN THE RUBBER COMPARE TO COSTS AND PERFORMANCE?

Part number	Conductive filler	Cost	Conductivity	Typical shielding effectiveness*
5750	Silver plated aluminium	\$\$\$	Extremely conductive	120 dB
5760	Ni-graphite	\$\$	Super conductive	100 dB
5755	Graphite	\$	Very conductive	70 dB

SPECIAL MATERIALS (ON REQUEST)

These Conductive Rubber Sheets are also available in special materials for special applications for example applications with chemicals. Below is a list of special materials. For availability and delivery please email info@hollandshielding.com

- Silicone Carbon
- Fluorosilicone Nickel Graphite
- Silicone Nickel Graphite Flame Retardant
- Silicone Silver Aluminium
- Fluorosilicone Silver Aluminium
- Fluorosilicone Nickel
- Silver Plated Nickel
- Silvered Glass

ELECTRICALLY CONDUCTIVE RUBBER IS AVAILABLE AS

- Sheets
- Molded parts
- Die-cut or flash cut
- Strip/Profile

ELECTRICALLY CONDUCTIVE FELT 5730

Felt, metalized with pure nickel

We would like to present our 5730 conductive felt for EMI shielding. A special electrically conductive coating is applied to our felt products to make them conductive. This material is widely used in various industries for EMI shielding applications. Conductive felt is a non-woven polyester fabric with an electrically conductive nickel coating. The thickness is 1.5mm.

FEATURES

- Maximum width 470mm
- Nickel coating: 35- 40 g/m²

OPTIONS

- With or without conductive adhesive
- CNC cut according to your drawing

SHIELDING PERFORMANCE*

Magnetic field H 3 MHz - 30 MHz		Electric field E 1 MHz - 30 MHz		Electric field E 100 MHz - 700 MHz		Plane wave 0.8 GHz - 18 GHz

CONDUCTIVE ELASTOMER 5751-5752

5251 - Conductive fluorosilicone elastomer &
5752 - Silicone shielding elastomer

CONDUCTIVE FLUROSILICONE ELASTOMER 5251

5751- Conductive fluorosilicone elastomer is a 45 durometer (Shore A), electrically-conductive fluorosilicone compound that is filled with silver-plated aluminium particles and comparable for conductive elastomer gaskets.

MIL-DTL-83528 TYPE D

5751- Conductive fluorosilicone elastomer is designed to meet the requirements of MIL-DTL-83528 Type D for a silver-plated, aluminium filled fluorosilicone capable of 90 dB of plane wave shielding effectiveness at 10 GHz, with a continuous use temperature range of -55 °C to +160 °C, and resistant to solvents and jet fuels.

CONDUCTIVE ELASTOMER GASKET MATERIALS

5751- Conductive fluorosilicone elastomer is supplied as fully-cured, conductive sheet stock or as ready-to-mold compounds. Catalyzed raw materials are available for press-cure molding and have a shelf life of six months. Uncatalyzed materials have an indefinite shelf life, but may require freshening after 1 to 2 years.

TECHNICAL SPECIFICATIONS

	5251	5252
Shore A (40-50 range)	45	30
Tensile psi (150 minimum)	185 psi	90 psi
Elongation % (300 minimum)	350%	675%
Compression Set % (30 max.) (70 hours at 100 °C)	21%	-

Specific Gravity (1.75 - 2.25)	2.08	2.1
Volume Resistivity ohm / cm (0.004 max.)	.002 ohm /cm	.008 ohm /cm
Color	Tan	Tan
Thermal Stability Range	-60 °C- 220 °C	-60 °C- 220 °C
Thermal Conductivity	-	1.5 W/mK

SILICONE SHIELDING ELASTOMER 5752

5752- Silicone shielding elastomers is a 30-durometer (Shore A), electrically-conductive, silicone shielding compound that's filled with silver-plated aluminium particles and softer than many silver-aluminium materials. 5752- Silicone shielding elastomers combines EMI shielding with environmental sealing, and proves that metal-filled conductive silicones don't have to be "too hard" for demanding applications.

MORE COMPRESSION, BETTER SEALING

Seal designers worry that a gasket made from a hard rubber will make an enclosure difficult to close, or allow the ingress of contaminants, chemicals, or water. Softer seal materials can improve compression, but it's still essential to avoid metal-on-metal contact. To address customer requests and industry complaints about metal-filled elastomers, it is developed as a ultra-soft silicone with a true 30-duromter (Shore A).

ULTRA-SOFT SILVER-ALUMINIUM SILICONE

5752- Silicone shielding elastomers are supplied as fully-cured, conductive sheet stock; continuous extrusion profiles; or ready-to-mold compounds. Catalyzed raw materials are ready for press-cure molding and have a shelf life of six months. Uncatalyzed materials have an indefinite shelf life, but may require freshening after 1 to 2 years.

5751 : Conductive fluorosilicone elastomer
5752 : silicone shielding elastomer

CONDUCTIVE FOAM TAPE 5775

Conductive Foam tape is an Electric Conductive Open cell Foam elastomers With highly compressible and superior resilience property

Conductive foam tape conducts electricity both horizontally and vertically.

Conductive foam tape is better than of plated sponge for less powder detachment when cutting, friction and repeating compression.

Conductive foam tape is easy to attach to objects due to electric conductive adhesive tape on the bottom, and easy for converting due to roll supply.

Thickness of the conductive foam tape is from 0.2mm to 0.5mm

TECHNICAL DETAILS

Subject	Unit	5775 Series	5776 Series
Foam	-	Silicone rubber + Metal + CNT Powder	
Color	-	Black	
Thickness	Mm	0.2, 0.25, 0.3, 0.35, 0.4, 0.45, 0.5mm (Thickness including adhesive tape types)	
Width/length	Mm	110mm / Roll or Customizing sizes	
Temperature	°C	105 °C (Depend on adhesive tape type)	
Resistance (top to bottom)	Ω	Typical. 0.1 Ω	
Surface Resistance	Ω/□	Typical. 0.1 Ω/□	
Recommended compression	%	Max. 50% of original height	
Compression Force	Kgf/cm ²	Max. 1.0 (compress 40% of original height)	
Recoverability	%	Typical. 85% (For 85 °C, 85%RH, 30% Compression) Typical. 90% (For 10.000 Times, 40% Compression)	
Powder Adhesion	Eye	Less powder detaching to testing tape.	
Adhesion Force	Kgf/inch ²	Min. 0.8	
Salt water, damp heat test	Eye	No color change	
Environment	-	Halogen & Pb Free, meets EU RoHS Non CI	
Adhesive Tape (acrylic)	-	Amucor/Conductive Al	Conductive Fabric/conductive textile
Advantage	-	Compatible price	Flexible, Re-workable

PROPERTIES

- Highly compressible with minimal force, good resilience, fast recovery
- Pass salt water and corrosion resistance test
- Meet Halogen Free, EU-RoHS, thermal resistance
- Easy to Die cut and converting due to roll type product
- Minimal dust and metal powder detach for external friction, repeating compression, handling and production
- Good electric conduction horizontally and vertically

APPLICATIONS

- EMI Shielding
- EMI Grounding
- EMI Wall
- EMI Gasket
- EMI Tape
- Electric connector
- Etc

CARRIERS

The conductive foam tape comes in two versions. One with a amucor carrier (aluminium alloy) or a conductive textile carrier.

ORDER EXAMPLE

Part number	Thickness (mm)	Width (mm)
5775 : Conductive foam tape with Conductive Al carrier 5776 : Conductive foam tape with Conductive Fabric carrier	0.2, 0.25, 0.3, 0.35, 0.4, 0.45, 0.5mm (including adhesive tape types)	The maximum width is 100mm
Length (mm)		Type
The maximum length is 50000mm (50 meters)		1 : Open cell foam 2 : Closed cell foam on open cell foam

ELECTRICALLY CONDUCTIVE FOAM 5770

Foam structure with foam as its central layer, suitable for EMI shielding and absorbing gaskets

This conductive foam is made of polyurethane foam coated with copper and nickel. Compression is 25% to 75%. The maximum application temperature is between 60 and 70 degrees Celsius.

The material will return to almost its original height when released. The foam is covered with a layer of conductive polyurethane to protect it from environmental influences and to prevent burrs when cutting. Its conductivity is excellent in all directions (X, Y, and Z). Conductive foam is fire retardant as well as RoHS compliant.

CHARACTERIZED BY:

- Available in thicknesses of 1, 2, 2.2 and 3.4mm
- Several layers can be joined together for thickness, on request
- Excellent electric conductivity throughout the material
- Excellent electromagnetic shielding effect
- High workability due to adhesion
- Easy die cutting, kiss cutting and slitting
- Size- Sheet type: max 950 x 950mm (other sizes on request)

APPLICATIONS

- Mobile phone
- Cable tray
- Shielded rooms

» **ELECTRICALLY CONDUCTIVE FOAM 5770**

MATERIAL SPECIFICATIONS

- Mesh: woven polyester, copper and nickel coated
- Conductive foam: polyurethane foam (copper and nickel coated)
- PSA: acrylic ester polyol copolymer + nickel powder
- PU coating: polymer resin (polyurethane)
- Release liner: CP paper avg 150 µm

BENEFITS AND OPTIONS

- With or without self-adhesive
- Supplied as sheets, strips or die-cuts
- With water seal
- Resistant to high temperatures, with cooling holes
- Reinforced with non-woven fabric on 1 or 2 sides
- PSA attachment method option
- Nickel/copper metalization
- X-Y-Z axis conductivity
- Tolerance of ± 0.5mm
- I/O static applications/gasket replacement

STRETCH CONDUCTIVE FABRIC 4900

Stretch conductive fabric is coated with a medical-grade silver coating and can be stretched in both directions

This conductive fabric is coated with a medical-grade silver coating and has a broad range of applications, since it can be stretched in both directions - lengthwise even up to 100% of its original dimension! The fabric can be used as an anti-bacterial wound or burn dressing (note: the material is not supplied sterile) but it is also a great material for electrode contacts, clothing, or other shielded garments. Not only is the material highly conductive, but the conductivity increases up to 25% as it stretches, which is convenient for smart textile applications. The silver coating is 99,9% pure.

ADVANTAGES

- The width of the fabric affects the percentage of conductivity
- The material is very consistent in quality
- When the material is stretched lengthwise, its conductivity increases; when you stretch it crosswise, conductivity decreases
- Crosswise the fabric can be stretched by around 60%, and lengthwise by almost 100%

APPLICATIONS

- “Intelligent” or shielding garments
- Cable shielding wrap
- Technology where a change in conductivity with stretch is important

SPECIFICATIONS

Property	Test value
Thickness	0.40mm
Standard width	135 cm (52 inch)
Temperature range	-30 to 90°C
Lengthwise stretch	~100% x length
Crosswise stretch	~60% x width
Surface resistivity	< 0.5 Ohm/sq. (unstretched)
Weight	4.3 oz/yd ²

MU-COPPER TAPE 3200

Many EMI problems can be solved easily with Mu-copper foil or tape. Mu-copper tape is available with or without (conductive) self-adhesive and an optional insulation layer. Mu-copper tape can be cut to any width starting at 3mm and can be delivered from stock. The most commonly used width is 25mm; standard roll length is 16.5 meters.

When large surfaces are to be shielded, it is recommended to cover most of the surface with Mu-copper foil, possibly in combination with tape with a conductive self-adhesive. This solution is much cheaper than covering the entire surface with tape strips.

Mu-copper tape can also be delivered as die-cut, according to your drawing, on strips or in pieces (as stickers), with optional self-adhesive. Almost every shape and size is possible.

APPLICATIONS

- EMI shielding of plastic enclosure parts
- EMI shielding tape/gasket
- Shielding of all non-conductive materials
- Ground plane
- Anti-static floors (ESD floors)
- Electrical connection between surfaces
- Shielding in housings and Faraday cages
- Temporary shielding during tests
- Mounting transparent foils and windows for EMI/RFI shielding
- Cable shielding (tape wrapped around cable)
- Temporary shielding during emissions and immunity tests

A large series of electrically conductive tapes for EMI/RFI shielding, ideal for grounding, conductance and EMI/RFI shielding of housings/Faraday cages

SHIELDING EFFECTIVENESS

There are many factors that influence the actual effectiveness of an EMI/RFI shielding tape after it has been applied, such as the type and thickness of foil, type of adhesive, closeness of contact, smoothness of application surface, strength and frequency of the EMI/RFI signal, etc. Still, attenuation values can be determined using standard tests and fixtures.

For EMI/RFI shielding tape, typical shielding effectiveness (far field) is in the range of 60dB to 80dB (10 kHz to 20 GHz). For more specifications see table and graph below.

3200 - MU-COPPER TAPE VS OTHER TAPES

» MU-COPPER TAPE 3200

COPPER TAPE WITH CONDUCTIVE ADHESIVE 3201, 3212 & 3218

A flexible metal foil with a highly conductive self-adhesive on one side, with a release liner

- Conductive acrylic adhesive
- Supplied on a removable liner for easy handling and die-cutting

Like all Holland Shielding System BV tapes, Copper tape 3201 is available in standard and custom widths and lengths. The standard length is 16.5 meters.

Standard thickness for this tape:

- 0.035mm (part no. 3201)
- 0.12mm (part no. 3212)
- 0.18mm (part no. 3218)
- Other on request

3202 TINNED COPPER TAPE

Similar to Tape 3201, but with a layer of tin added for protection against corrosion and better solder-ability.

3206 DIE-CUT MOUNTING TAPE / SANDWICH COPPER TAPE

A flexible metal foil, laminated on 2 sides with a conductive self-adhesive. Available in sheets and rolls.

3207 COPPER TAPE WITH PAPER INSULATION

Similar to Tape 3201, but with a paper layer added to insulate the top layer of copper.

- Thickness of the copper is 0.035mm
- Thickness of the paper insulation layer is 0.5mm
- Available up to a width of 1500mm

ALUMINIUM TAPE 3203

Aluminium tape was developed especially for EMI/RFI shielding/screening in aluminium housings and frames to prevent galvanic corrosion.

We not only produce our aluminium tape on rolls, but also die-cut according to the customer's drawing on strips or in pieces (as stickers), both with or without self-adhesive.

TECHNICAL SPECIFICATION AND PART NUMBERS

Part number (with conductive adhesive)	3203
Part number (with standard adhesive)	3303
Construction	
Foil material	Aluminium
Surface	Shiny
Foil thickness	0.040mm
Total thickness	0.065mm
Adhesive	Synthetic conductive resin
Adhesive performance	4.5 N/cm
Tensile strength	25 N/cm
Temperature resistance	155 °C
El. resistance through adhesive	0.003 Ohm
Standard roll widths(mm)	10, 25, 50, 100 Other width on request
Roll length	Min. 16.5m (standard) Other roll length on request

These values are measured under laboratory conditions.
In other situations results may differ. Please read our Guarantee.

CONTACT-SURFACE TAPE 3204

This contact-surface tape is used to improve the corrosion resistance of construction metals (like untreated steel plates), or to improve galvanic compatibility when 2 metal parts are connected with a gasket. After the parts have been coated, the paint overlaps the metal tape to increase the bonding.

TECHNICAL SPECIFICATION AND PART NUMBERS

Part number (with conductive adhesive)	3204
Part number (with standard adhesive)	3304
Construction	
Foil material	Soft copper
Surface	Shiny
Foil thickness	0.035mm
Total thickness	0.060mm
Adhesive	Synthetic conductive resin
Adhesive performance	4.5 N/cm
Tensile strength	55 N/cm
Temperature resistance	155 °C
El. resistance through adhesive	0.003 Ohm
Standard roll width (mm)	10, 25, 50, 100 Other width on request
Roll length	Min. 16.5m (standard) Other roll length on request

These values are measured under laboratory conditions.
In other situations results may differ. Please read our Guarantee.

MOUNTING TAPE 3205

A double-sided self-adhesive transfer tape for mounting purposes. This tape can be applied much more quickly than a conductive glue and it is easy to position it very accurately. No time is required for curing (for the pressure-sensitive version). For lower resistance and/or to fill in gaps on a rough surface, we recommend Shieldokit electrically conductive two-component adhesive

TECHNICAL SPECIFICATION

Part number (with conductive adhesive)	3205
Part number (with standard adhesive)	-
Construction	
Color	Transparent
Base material	Silicone release paper
Total thickness	0.050 mm
Adhesive	Electrically conductive acrylic
Adhesive performance	5.5 N/cm
Temperature resistance	Standard -20°C up to +130°C Short term up to 180°C
Electrical resistance	0.01Ω/□
Shelf life	6 months from date of delivery
Storage	Cool and dry in original packaging at 23°C +/- 2°C and 50% Relative Humidity +/- 2% RH
Standard roll widths (mm)	10, 25, 50, 100 Other width on request
Roll lengths	Min. 16.5m (standard) Other roll length on request

These values are measured under laboratory conditions.
In other situations results may differ. Please read our Guarantee.

SEMI-CONDUCTIVE NON-WOVEN 4771

Semi-Conducting non woven tapes primary function is to equalize the field current around the conductor or core and to ensure electrical contact with the earthing system. This reduces the electrical stress on the insulation material and enhances performance. They can also be used to prevent electrolytic corrosion of metallic armour layers.

BENEFITS

- Good bedding performance
- Good conductive properties
- Strong material

APPLICATIONS

- ESD lining
- EMI shielding of cables
- Shielding and electric field control

TECHNICAL SPECIFICATION AND PART NUMBERS

Properties	Part number					Test method
	4771-0.14	4771-0.15	4771-0.18	4771-0.30	4771-0.50	
Thickness (mm)	0.14	0.15	0.18	0.30	0.50	ISO 9073-2
Mass per unit area (g/m ²)	60	100	95	60	95	ISO 9073-1
Tensile strength (N/cm)	35	60	60	35	60	ISO 9073-3
Elongation (%)	13	13	14	13	14	ISO 9073-3
Specific length resistivity (Ωcm)	10	5	800	800	600	DIN 54345 Part 5
Volume resistivity (kΩcm)	20	10	50	10	10	DIN 54345 Part 1
Service temperature (°C)	<140					IEC 60216 (TIS 045)
Processing temperature (°C)	<225					(TIS 045)
Max. width	960mm					

These values are measured under laboratory conditions.
In other situations results may differ. Please read our Guarantee.

MU-FERRO TAPE 3208

Mu-ferro foil and tape have been developed for low-frequency (LF) magnetic field shielding

Mu-ferro foil/tape is a thin foil; its thickness is only 0.023mm. It combines excellent soft magnetic properties with unusual mechanical hardness and flexibility. This means that tight bends can be realized with only very slight impairment of permeability. The fine strip thickness and comparatively low electrical conductivity permit effective shielding even of higher-frequency fields.

APPLICATIONS

The primary applications of Mu-ferro foil/tape are flexible shielded cables with small diameters and rapid, flexible solutions to problems at low field strengths.

OTHER APPLICATIONS

- Magnet heads
- Magnetic field sensors
- Chokes
- Transformers
- Electronic article-surveillance tags

ADVANTAGES

- Very high permeability
- Low losses

CHARACTERISTICS

Mu-ferro foil works well for shielding low-frequency magnetic fields. Due to the low electrical resistance it shields both low-frequency electric fields (LF) and high-frequency fields (HF). Comparable with Mu-Metal specifications.

PROPERTIES

- Easy to bend
- Easy to fold
- Can be cut with scissors
- Good corrosion resistance in a normal environment
- Bending, folding, cutting does not cause major loss of attenuation

GROUNDING

Due to the highly conductive surface this material can be grounded easily to shield low-frequency (LF) electric fields. For professional grounding please contact us.

Width	Any width up to 50mm
Length	By the meter; rolls of up to 100m
Attenuation LF magnetic field	14 dB = 80 % (for more shielding, use multiple layers)
Permeability	$\mu 4 = 10000$; $\mu \text{ max.} = 25.000$
Saturation induction Bs	0.58 T
Density	7.7 g/cm ³
Curie temperature °C	200
Crystallization temperature Tx °C	530
Specific electrical resistance	1.4 $\mu\Omega\text{m}$
These values are measured under laboratory conditions. In other situations results may differ. Please read our Guarantee.

AMUCOR TAPE SERIES 4700

Amucor foil and tape for EMI shielding. Amucor foil or tape can be used to shield plastic housings and enclosures

Many EMI problems can be solved easily by the use of Amucor foil or tape, a commonly used material. Amucor foil and tape can be produced with or without (conductive) self-adhesive and an optional insulation layer.

Amucor tape can be cut to any width starting at 3mm and can be delivered from stock. The most commonly used width is 25mm. The standard roll length is 16.5 meters.

If coverage of large surfaces is needed, it is usually best to use tape with a conductive self-adhesive in combination with foil. This solution is much cheaper than only using tape.

Amucor foil can also be delivered as die-cut, according to the customer's drawing, on a strip or in pieces (stickers), with optional self-adhesive.

OPTIONS

- Fire-retardant version
- With (conductive) self-adhesive backing
- With insulation layer
- Die-cutting to any shape according to CAD drawing

APPLICATIONS

- EMI shielding of plastic enclosure parts (EMI/RFI-shielding tape/gasket)
- Shielding all non-conductive materials
- Ground plane
- Anti static floor (ESD floor)
- Electrical connection between surfaces (sheets/foils)
- Die-cuts
- Shielding in housings and Faraday cages
- Temporary shielding during tests
- Mounting transparent foils, windows for EMI/RFI shielding
- Cable shielding (wrapped around the cable)
- Temporary shielding during emission and immunity test

SHIELDING PERFORMANCE*

There are many factors that influence the actual effectiveness of an EMI/RFI-shielding tape after it has been applied, such as type and thickness of the foil, type of adhesive, closeness of contact, smoothness of the application surface, strength and frequency of the EMI/RFI signal, etc. Still, a nominal attenuation value can be determined using standard tests and fixtures.

AMUCOR FOIL 4701

The reinforced Amucor foil is both cost effective and heat resistant. This thin foil can be applied easily to any surface and any shape of housing. We can also supply the foil, which is 0.04mm thick, in a die-cut version.

ADVANTAGES

- Cost-effective
- Easily follows the contours of the housing
- Fire-retardant
- Extremely strong
- Corrosion free

» AMUCOR TAPE SERIES 4700

AMUCOR TAPE WITH STANDARD ADHESIVE (4702)

This is an Amucor tape (type of aluminium) that is 11 microns thick, reinforced with polyester (23 microns thick) and with an acrylic adhesive on the back.

AMUCOR FOIL WITH PET IN THE MIDDLE (4716)

Amucor foil + PET film + Amucor foil. This product consists of two layers of 11 microns thick Amucor with a 23 microns layer of polyester in between. This material is extremely strong.

AMUCOR FOIL WITH A REINFORCEMENT NET (4706)

Amucor foil can also be produced with a strengthening reinforcement net. Because the reinforcement net makes this material so strong, it can be produced in a very large width of 3100mm. This material is designed to cover walls and floors for protection against unwanted radio frequencies (RF). The material can also be used to quickly create a shielded room, for example by covering the walls of a wooden box. Please note: at the top of the metal is a thin insulation layer for protection against corrosion.

Amucor foil with a reinforcement net can be produced as a foil (4706) without self-adhesive but is also available as tape (4707), with standard adhesive.

AMUCOR TAPE WITH PET IN THE MIDDLE AND CONDUCTIVE ADHESIVE (4718)

Sandwich tape consisting of two layers of Amucor (11 microns thick) with polyester (23 microns thick) in between and a conductive adhesive on the back.

AMUCOR FOIL WITH A REINFORCEMENT NET 4706

Amucor foil with reinforcement net for EMI shielding where a strong but also very wide shielding film is required

Many EMI problems can be solved easily by the use of Amucor foil or tape. When there is a very broad and strong shielding foil required, than our 4706 Amucor foil with reinforcement net can provide the solution. The shielding foil can be produced with or without (conductive) self-adhesive and an optional insulation layer.

Amucor foil with reinforcement net can be cut to any width and can be delivered from stock. The most commonly used width is 1000mm. Standard roll length is 16.5 meters.

Amucor foil with reinforcement net can also be deliver as die-cut, according to your drawing, on strip or in pieces (as a sticker), with optional self-adhesive.

OPTIONS

- Fire-retardant version
- With (conductive) self-adhesive backing
- With insulation layer
- Die-cutting in any shape according to CAD drawing

Big amucor cage for drone testing

APPLICATIONS

- EMI shielding of plastic enclosure parts (EMI/RFI shielding tape/gasket)
- Shielding all non-conductive materials
- Ground plane
- Anti static floor (ESD floor)
- Electrical connection between surfaces (sheets / foils)
- Die-cuts
- Shielding in housings and Faraday cages
- Temporary shielding during tests
- Mounting transparent foils, windows for EMI/RFI shielding
- Cable shielding (Wrap around the cable)
- Temporary shielding during emission and immunity tests

AMUCOR FOIL WITH A REINFORCEMENT NET (4706)

Amucor foil can also be produced with a strengthening reinforcement net. Because the material with the reinforcement net is so strong, it can be produced in a very large width of 3100mm. This material is designed to cover walls and floor for protection against unwanted radio frequencies (RF). The material can also be used to very quickly create a shielded room, for example from a wooden box.

Amucor foil with a reinforcement net can be produced as a foil (4706) without self-adhesive but can also be produced as tape (4707), with standard adhesive or as tape (4708) with conductive adhesive.

CONDUCTIVE TEXTILE 4711

Very easy to apply to plastic housings
to create an EMI-shielded housing

Conductive textile is made of a nylon rip stop fabric, metallized with Cu/Ni, extremely strong and flexible. It has conductivity in all directions, i.e. along the axes X, Y and Z. Conductive textile can be supplied as a cloth or as pressure-sensitive adhesive (PAS) tape which is easy to apply to plastic housings in order to cover complex forms and shapes. Conductive textile has low contact resistance and the tape version has superior adhesive force. The product shields electromagnetic interference (EMI) effectively.

Laminates of metal foils with flame-retardant Nomex or Valox are also available. See our Mu-copper tapes or Amucor tapes.

OPTIONS

- Flame-retardant version
- With (conductive) self-adhesive backing
- With insulation layer
- Die-cutting to any shape

ADVANTAGES

- Easily follows the contours of your housing
- Flame retardant
- Extremely strong
- Corrosion free
- Can be applied as die cut parts, as a sheet or in roll form

APPLICATIONS

- Shielding plastic enclosure parts
- Shielding all non-conductive materials
- Ground plane
- Anti static floor
- Electrical connection between surfaces (sheets/foils)
- Die-cuts
- Shielding in housings
- Shielding cables
- Temporary shielding during tests

SHIELDING PERFORMANCE* (0.10MM THICK)

4711 - CONDUCTIVE TEXTILE CLOTH

Our conductive textile cloth can be delivered on rolls or as a sheet. The cloth can also be cut into any desired shape according to a customer's CAD drawing.

4712 - CONDUCTIVE TEXTILE TAPE WITH STANDARD ADHESIVE

Our conductive textile tape with standard non-conductive adhesive on the back can be supplied on rolls. The tape is easy to use, e.g. for shielding cables. After application of the tape, the cables remain flexible.

» CONDUCTIVE TEXTILE 4711

4713 - CONDUCTIVE TEXTILE TAPE WITH CONDUCTIVE ADHESIVE

Our conductive textile tape with conductive adhesive on the back can be supplied on rolls. The tape is easy to use, e.g. for shielding cables. After application of the tape, the cables remain flexible.

4714 / 4715 - CONDUCTIVE TEXTILE TAPE WITH INSULATION LAYER

Our conductive textile tape with adhesive on the back can be supplied with a 0.15mm thick white insulation layer or with a 0.22mm thick black one, and can be delivered on rolls.

4721 - CONDUCTIVE TEXTILE WITH HOT-MELT ADHESIVE (FLAME RETARDANT LEVEL: UL94V0)

Our conductive textile with hot-melt adhesive is flame retardant to the level of UL94V0.

FLEXIBLE CABLE SHIELD 4700R

Flexible cable shield for EMI shielding of flexible cables. Branches are easy to realize

Flexible cable shield is suitable for EMI-shielding applications where flexibility is required, for example when cables have small diameters. The material guarantees superb EMI shielding performance. The product is supplied on rolls and can be wrapped around the cables. Flexible cable shield is available in **Amucor** or in **conductive fabric**, with or without (conductive) self-adhesive.

PART NUMBERS

- **4701R** : Reinforced Amucor foil
- **4702R** : Reinforced Amucor foil with self-adhesive
- **4711R** : Conductive fabric
- **4712R** : Conductive fabric with self-adhesive
- **4713R** : Conductive fabric with conductive self-adhesive

ADVANTAGES

- Highly flexible
- High EMI-shielding performance
- Wide range of applications
- Easy to cut
- Useful in a broad range of temperatures and environments

STANDARD WIDTHS

READY-MADE SLEEVE 4700S

We have developed cost-effective EMI protection for flat cables. This is an easy way to protect sensitive sources from interference

The ready-made sleeve (EMI-screening sleeve) for flat cables allows easy cable routing during assembly. The material is a highly conductive Amucor film offering full 360° protection against electromagnetic radiation. Shielding performance can even be improved using optional grounding connections.

For placing or curving flat cables there is an ultra flexible solution with conductive textile with a self-adhesive, combining superb mechanical and EMI-screening properties. The sleeve is also available for round cables with a diameter up to 45mm. The product can be supplied in rolls of up to 100 meters.

Ready-made sleeves can be supplied in **Amucor** or in **Conductive textile (fabric)**. The material provides high shielding performance. The ready-made sleeve is used for cables with large diameters and flat cables and can be produced with a self-adhesive backing so that the EMI shielding remains securely in place.

90-100	4701S-3-100

PART NUMBERS

- **4701S** : Reinforced Amucor foil
- **4702S** : Reinforced Amucor foil + self-adhesive
- **4711S** : Conductive fabric
- **4712S** : Conductive fabric + self-adhesive
- **4713S** : Conductive fabric + conductive self-adhesive

GROUNDING CONNECTION (OPTIONAL)

On request, we can make the cable shield completely customized, for example, a connection to earth but also other special shapes and sizes are available on request.

SHIELDING PERFORMANCE* (DB)

ORDER EXAMPLE

Part number	Height (mm)	Width (mm)
4701S : Reinforced Amucor foil	Specify the height of the cable in mm	Specify the width of the cable in mm
4702S : Reinforced Amucor foil + self-adhesive		
4711S : Conductive fabric		
4712S : Conductive fabric + self-adhesive		
4713S : Conductive fabric + conductive self-adhesive		

Length (mm)
Specify the length per sleeve

WRAPSHIELD 4730-4760

Wrapshield is a knitted wire mesh for EMI cable shielding

Cable wrapping is used to shield, ground and statically discharge cables, or to harness entire bundles of cables. Wrapshield is a double-layer knitted wire mesh supplied on rolls, which is used to wrap cables. For the best shielding performance it is important to assure there is a 50% overlap.

BENEFITS

- Highly flexible
- High shielding performance
- Wide range of applications
- Shielding performance can be increased by more overlap
- One size for all diameters
- Branches can be wrapped

WRAPSHIELD MATERIALS

Wrapshield is available in four different wire materials:

- 4730 Wrapshield monel
- 4740 Wrapshield tinned copper/steel (T.C.S.)
- 4745 Wrapshield tinned copper (T.C.)
- 4750 Wrapshield stainless steel
- 4760 Wrapshield aluminium

ORDER EXAMPLE

Part number	Width (mm)	Length (m)
4730 : Wrapshield monel	12 : 12mm width	Standard roll lengths: 10, 25, 50 meter
4740 : Wrapshield tinned copper/steel (T.C.S.)	25 : 25mm width	
4745 : Wrapshield tinned copper (T.C.)	50 : 50mm width (standard)	
4750 : Wrapshield stainless steel	100 : 100mm width	
4760 : Wrapshield aluminium	150 : 150mm width	

STANDARD WIDTHS

12, 25, 50, 100, or 150mm.
Other widths on request.

OPTIONS

- Flame-retardant version
- With self-adhesive backing
- Customer-specific widths

FLEXIBLE SHIELDING TUBE 4800

A ready-to-use Mu-copper wire or tinned Mu-copper wire braided EMI-shielding tube through which a cable or bundle of cables can be pulled.

Flexible EMI shielding tube is a ready-to-use Mu-copper wire or tinned Mu-copper wire braided tube through which a cable or bundle of cables can be pulled. When the braided EMI/RFI-shielding tube is compressed lengthwise, the diameter expands to simplify the assembly. Therefore a wide range of cable diameters can be shielded with a single flexible shielding tube.

Please note that the EMI/RFI-shielding tube has to be expanded for larger diameters and that a larger nominal length will then be required- up to twice the length of the cable.

Typical EMI/RFI problem areas behind connectors and backs-hells can easily be shielded with the 4800 series Flexible shielding tube (aka tubular braids). Multiple sizes are available to shield problem areas at the ends of cables or harnesses where additional EMI/RFI shielding is necessary to meet demanding specifications.

PART NUMBERS

Diameter(mm)	Diameter(inch)	Part number	mm ²
3- 6	0.12- 0.24	4806	1.32
5- 15	0.2- 0.59	4815	7.9
12- 24	0.47- 0.95	4824	12.4
20- 36	0.79- 1.42	4836	19.4
32- 48	1.26- 1.89	4848	21.6
42- 60	1.65- 2.36	4860	23.8
60- 80	2.36- 3.15	4880	60.3
80- 100	3.15- 3.93	48100	78.4

For larger diameters, please consider our 4730-4760- Wrapshield

ADVANTAGES OF FLEXIBLE EMI-SHIELDING TUBE

- Highly flexible
- High EMI/RFI-shielding performance
- Wide range of applications
- Easy to cut
- Useful in a broad range of temperatures and environments

MOUNTING OPTIONS

- 01 Tie wrap
- 02 Tape
- 03 Cable entry

ORDER EXAMPLE

Part number	Length (m)
4806 : 3- 6mm	Standard roll lengths : 10, 25, 50 meters
4815 : 5- 15mm	
4824 : 12- 24mm	
4836 : 20- 26mm	
4848 : 32- 48mm	
4860 : 42- 60mm	

ENTRY SHIELD 4910

EMI/RFI-shielded cable entry-system to mount, ground and shield several cables or bundles of cables simultaneously

A shielded cable-entry system to mount, ground and shield several cables or bundles of cables simultaneously. The highly conductive, flexible EMC gasket between which the cables are entered into the enclosure guarantees excellent shielding performance between 1 MHz and 10 GHz.

OPTIONS (ON REQUEST)

- Watertight constructions
- Flame-retardant gaskets
- Chemical-resistant gaskets
- Temperature-resistant gaskets
- Stainless steel version

ADVANTAGES

- High shielding performance over a wide frequency range
- Mounting within a few minutes
- Very easy to add more cables later
- Requires only 1 rectangular recess in your enclosure
- Standard or according to customer specifications

INTEGRATION OF A CABLE-ENTRY SHIELD

You can integrate Entryshield 4910 easily into any enclosure. You should make a slot in your housing that is 36mm in height (H in the technical drawing). The length of the slot depends on how many cables you want to carry in. Entryshield is a clip-on profile that can be attached easily by pressing it into position.

ENTRYSHIELD INSTANT VERSION

We can deliver cable-entry shield as an turnkey implementation. We call this the Entryshield instant version. This instant version is a Mu-ferro plate of 100 x 200mm, 2mm thick, with the entry shield already mounted in this plate. The instant version is like a letterbox flap, only for entering EMI/RFI-shielded cables. This version is easy to fit into a EMI/RFI-shielded box, EMI/RFI-shielded room or Faraday cage.

OPTIONS

- With Amucor EMI gasket
- Made according to your drawing
- Custom drill pattern

* Larger versions or a version according to your drawing are available on request.

ORDER EXAMPLE

4910 : Entryshield (Profile)	Specify the length in mm
4915 : Entryshield (Instant version)	

CABLE GROUNDING CLAMPS 4920

Cable grounding clamps EMI/RFI shielding and ESD suppression. These clamps can be used as an end piece for cable shields.

Cable grounding clamps are perfect for attaching and grounding EMI/RFI-shielded power and signal cables in various applications where an electrical connection is required between the cable and the grounding/EMI/RFI-shield circuit for EMI/RFI shielding or ESD suppression.

The product is supplied in strips of 1 meter, on rolls, or precut to the desired length. The holes in the strip can be placed at any desired interval. In our standard strips the distance between the holes is 12mm.

TECHNICAL DRAWING

***Notice**
Information supplied in these data sheets is based on independent and laboratory tests which Holland Shielding Systems BV, hereafter referred to as HSS believes to be reliable. HSS has no control over the design of customer's product which incorporates products, therefore it is the responsibility of the user to determine the suitability for his particular application and we recommend that the user make his own test to determine suitability.

FEATURES

- Provides simultaneous attachment and grounding for coaxial and braid-shielded cables.
- Resin base plated with copper foil.
- Due to the high-quality materials used, the clamp will not damage the cable shielding or the insulation sleeve.
- Excellent flexibility ensures constant contact pressure and stable contact resistance under heat variation and heavy vibration conditions.
- The contact resistance of the highly conductive copper layer is lower than the nickel or chromium plating on the standard metallic clamps.
- Low-weight, space-saving solution for dedicated cable grounding.

SPECIFICATIONS

Material:

- Conductive textile inside
- Flammability rating: UL94-V0
- Mu-copper foil outside
- Thickness: 0.03mm (0.001 inch)

Best mounting method:

- M3 (Size 4) screw

ORDER EXAMPLE

Series	Strips/Pieces	Length (mm)
4920	Specify if you want to order as strip of 1 meter (S) or as pieces (P) cut in length	When you order in pieces then specify the length per piece in mm

The product described in this data sheet shall be of standard quality, however the products are sold without warranty of fitness for a particular purpose, either expressed or implied, except to the extent expressly stated on HSS invoice, quotation or order acknowledgment. All risks of lack of fitness, patent infringement and the like are assumed by the user.

HIGH PERFORMANCE CABLE ENTRY SHIELD 4930

Shielding, grounding and attaching of cables to and from the equipment in your shielded enclosure

A shielded cable going into or out of the EMI/RFI-shielded housing has to make 360° contact, i.e. around the jacket of the shielded cable, with the EMI/RFI-shielded housing. For cables without a shielding jacket, Power or signal line filters should always be installed. Otherwise the cable will act as an antenna.

PENETRATION/THROUGHPUT

For throughput of larger numbers of cables in a situation where space is limited, it makes sense to use an EMI/RFI-shielded cable entry system. Power and signal cables, as well as water supply lines and waveguides can be accommodated in the cable entry system. The electrically conductive beryllium-copper contact plate with small pointed fingers ensures good contact with the cable shield, which guarantees good shielding performance.

OPTIONS

- Also available in fireproof, gas tight or watertight versions
- The shielding cable entry system can be provided with additional dummy holes on the inside plate and the beryllium-copper contact plate. The outer plate remains closed to keep shielding performance high. You can add more cables later by drilling a hole in the outside plate. We will mark the position of the dummy holes on the outer plate in advance.

ADVANTAGES

- This system facilitates letting many cables enter into a small area without the individual use of (expensive) cable glands.
- Cable diameters can be between 3- 28mm. Other diameters on request.

ORDERING/QUOTATION

To get a quick quote please send us a list of cable diameters and we will submit a proposal. You can describe your specifications or the size of the entry plate.

This High-performance shielding cable entry system can also be made according to the customer's drawing.

If you want a quote for a High-performance cable shielding system, please send an email to info@hollandshielding.com.

ORDER EXAMPLE

Series	Height (mm)	Width (mm)
4930	Height of the Cable entry shield high performance in mm	Width of the Cable entry shield high performance in mm
	Number of cables	Diameter of the cables (mm)
	Specify the number of cables to be passed through the cable entry shield high performance	Specify the diameter of the cables in mm

CABLE SHIELD TIE-WRAPS 4950

A convenient tie-wrap for cable shielding, EMI cable-shielding tie-wrap is used for fast, reliable, and cost-effective RFI/EMI/EMP shield terminations

The area where the cable shield is connected to the cabinet earth is a critical point. It is very important that the connection has a low resistance

We provide a tie-wrap solution that is very easy to install, since no tools are required. The tie-wrap is made of plastic, and the electrically conducting layer is made of a springy metal wire mesh which is pulled together easily by tightening the tie-wrap.

4950 series EMI cable-shielding tie-wrap provides a highly effective shield termination for any size and type of backs hell design. EMI cable-shielding tie-wrap has successfully passed rigorous testing with respect to shocks, vibrations, and thermal cycles, unlike other shield-termination systems. There is no device on the market that realizes shield termination more quickly.

Used for critical applications in aircraft, military vehicles, and other sensitive electronic equipment.

STANDARD SIZES

Part number	Width B (mm)	Length A (mm)
4950-4-100	4	100
4950-5-150	5	150
4950-7-145	7	145
4950-7-190	7	190

BENEFITS

To protect sensitive equipment, 4950 series EMI cable shielding tie-wrap is designed to provide the following advantages:

- Virtually eliminates RFI/EMI/EMP leakage paths
- Maintains constant tension under extreme environmental conditions
- Clasps small diameters just as easily, quickly and reliably as large diameters
- Simple and tool-free assembly
- Space saving by an optimized arrangement
- Permanent and continuous pressure on the cable shield, adjustment of spring load not necessary
- Vibration proof, maintenance free

SPECIFICATIONS

CABLE CONNECTOR SHIELDS 4955

Easy connector shielding without replacing the whole connector

These sleeves can create a more continue connection where cable shields are interrupted.

They can be mounted afterward and are very flexible not only in lengths and the bending but also in diameter. For extra strengths these can be clamped with cable clamps, tie-wraps.

When you want the connection water tight you can cover these with shrinking sleeves.

BENEFITS

- In any size, diameter or length
- The conical version available to create also bigger steps in diameter
- Eventual with inside high flexible copper strips for higher currents

4956 - CONICAL CABLE CONNECTOR SHIELDS SERIES

The Conical sleeves is for connecting the braiding of the shield to bigger diameters, like connectors, receptacles, tubes or housings. This shield taper to create an optimal shield between 2 different diameters.

STANDARD SIZES

Diameter range	Part number	Begin diameter	End diameter	Part number
2-4mm	4955-2	2-4mm	8-12mm	4956-2-8
4-8mm	4955-4	4-8mm	12-16mm	4956-4-12
8-12mm	4955-8	8-12mm	16-18mm	4956-8-16
12-16mm	4955-12	12-16mm	22-25mm	4956-12-22
16-20mm	4955-16	16-20mm	25-30mm	4956-16-25
20- 24mm	4955-20	20- 24mm	28-32mm	4956-20-28

30- 40mm	4955-30	30- 40mm	50-55mm	4956-30-50
40- 60mm	4955-40	40- 60mm	70-75mm	4956-40-70

Larger diameters on request

LENGTH

These cable connector shields can be made in any desired length. You can specify the length at the end of the part number. For example, to have a quotation for Cable connector shields with a diameter of 8mm and a length of 50mm you can specify the part number as follows: **4955-8-50**

TECHNICAL DETAILS

Material	Silver plated 76% Nylon 24% elastic fiber fabric
Stretch	All directions
Silver coating	99.9% pure
Surface resistivity	<0.5 Ohm/sq. (unstretched)
Shielding Effect	30- 60 dB in range 30 Mhz- 20 Ghz
Resistance	<0.15 ohm /sq. (unstretched) between the shields based on optimal compression
Temperature range	-30 to 90 °C
Material thickness	0.40mm
Stretch	~100%

From diameters 16mm the sleeves can be reinforced with 0.12mm copper strips. These strips are sticked on the inside of the sleeve, but at special order other connection parts available.

The elasticity of the diameter is about 1 : 2, please take care that the strips need some initial contact force. The best is to send the cable assembly to us so that we can check the right fitting or contact our technical staff.

ORDER EXAMPLE

Part number	Length (mm)
4955 : Cable connector shield	Specify the length of the shield in mm
4956 : Conical Cable connector shield	

FLAT CABLE CONNECTOR SHIELD 4970

Easy to be stuck to any connector to create a high shielding performance flat cable

A flat cable in electronics housing often leads to interference. Previously we already developed the 4700S series ready-made sleeve (EMI screening sleeve) for flat cables that allows easy cable routing during assembly.

Now we have developed a flat cable connector shield that is very easy to be stuck to any connector of a flat cable. With this shield the cable including the connector can be fully shielded to get the best shielding performance.

Most sizes are available from stock but the shield can be produced in any dimension. We only need to know your type of connector so that we can produce the shield in the right dimensions.

Shielding performance can even be improved using optional grounding connections.

Please note: also suitable for 7-pin serial ATA cable and 15-pin power connector for Serial ATA. Every other connector shield can be customized within a day.

ORDER EXAMPLE

Series	Pins
4970	4, 6, 8, 9, 10, 14, 15, 16, 18, 20, 24, 25, 26, 34, 37, 40, 50, 60, 64 and 80

*Notice

Information supplied in these data sheets is based on independent and laboratory tests which Holland Shielding Systems BV, hereafter referred to as HSS believes to be reliable. HSS has no control over the design of customer's product which incorporates products, therefore it is the responsibility of the user to determine the suitability for his particular application and we recommend that the user make his own test to determine suitability.

The product described in this data sheet shall be of standard quality, however the products are sold without warranty of fitness for a particular purpose, either expressed or implied, except to the extent expressly stated on HSS invoice, quotation or order acknowledgment. HSS does not warrant that products described in this data sheet will be free of conflict with existing or future patents of third parties. All risks of lack of fitness, patent infringement and the like are assumed by the user.

BENEFITS

- Very high shielding performance
- Available for any connector
- Easy to mount
- Good connection to the shield of the cable

OPTIONS (ON REQUEST)

- Can be equipped with grounding strip for better performance
- Performed in an Amucor execution

STANDARD PART NUMBERS

Based on availability of standard connectors, the number of conductors is usually restricted to a few values. These include 4, 6, 8, 9, 10, 14, 15, 16, 18, 20, 24, 25, 26, 34, 37, 40, 50, 60, 64 and 80.

Part number	Connector
4970-4	4

4970-50	50
4970-60	60
4970-64	64
4970-80	80

EMI/RFI CABLE ENTRY
GLANDS 4960

HF-Closed (EMC) Cable Entry Gland with metric and
PG- line - nickel plated with IRIS-suspension.
Excellent EMP/RFI shielding for screened cables

The Cable Entry Gland provides an excellent EMP/RFI shield for screened cable which pass through enclosure walls. A round or threaded hole is required to mount the gland. (The gland can also be welded or soldered into the enclosure wall).

The Cable Entry Gland uses a wire mesh olive, which when compressed provides circumferential pressure to both the cable and gland body, giving excellent electrical conductivity. The gasket ensures a good EMI seal between gland & enclosure.

Using a conductive heat shrink boot (not supplied) can also provide a degree of environmental sealing.

SHIELDING PERFORMANCE*

HIGH PERFORMANCE EMC
CABLE GLANDS 4965

High performance cable gland to seal your shielded
cable at the end both waterproof and EMC

With the 4965 / 4966- High performance EMC cable glands is setting new standards in attenuation values, by its successful certification for Cat. 7A applications. Now these high-quality, EU-approved EMC cable glands have fulfilled the demanding requirements for UL certification and can therefore also be used worldwide.

The spring is making contact in 360° with the screening braid. It combines excellent HP-damping performance and is easy to install with the other system features to reach values greatly in excess of the requirements of EN 50262. Whereas Cat. 7A requirements in accordance with DIN IEC 61156-5 demand at least 60 dB up to 1.000 MHz, our High performance EMC cable glands performs significantly better, attaining values of 65 dB to over 100 dB.

4965 - HIGH PERFORMANCE EMC CABLE
GLANDS

Brass nickel plated high performance EMC cable gland, with metric thread as per EN 60423.

Type of protection: IP 68 (up to 15 bar)

Even in the high frequency range up to 2.5 GHz, the values are typically a minimum of 50 dB. The cable gland also has a very high current-carrying capacity.

The High performance EMC cable glands is available in sizes M16 to M85 in brass, stainless steel 1.4305 and 1.4571 with standard metric threads and 15mm long special threads.

When it comes to installation, High performance EMC cable glands also leads the way: the screening braid is first exposed, then the cable can be simply pushed through the cable gland, which automatically causes the triangular spring to make secure contact around the screening braid, without the pressure screw having to be tightened. The design of the spring precludes its getting caught in the braiding even if the assembly is dismantled.

4966 - HIGH PERFORMANCE EMC CABLE
GLANDS FOR HIGH TEMPERATURES

Brass nickel plated high performance EMC cable gland, with metric thread as per EN 60423. This High performance EMC cable gland is practically the same as 4965, however, these can withstand higher temperatures.

Type of protection: IP 66, IP 68 (up to 15 bar)

HDMI CABLE CONNECTOR
SHIELD 4975

Easy to be stuck to any HDMI connector to create
a high shielding performance HDMI cables

A HDMI cable in or outside electronics housing often leads to interference.

Now we have developed a HDMI cable connector shield that is very easy to be stuck to any connector of a HDMI cable. With this shield the cable including the connector can be fully shielded to get the best shielding performance.

Most sizes are available from stock but the shield can be produced in any dimension. The shields can also be manufactured according to your drawing.

Shielding performance can even be improved using optional grounding connections or by using multiple layers, or multiple HDMI connector shields stuck over each other.

BENEFITS

- Very high shielding performance
- Available for any connector
- Easy to mount
- Good connection to the shield of the cable

OPTIONS (ON REQUEST)

- Can be equipped with grounding strip for better performance
- Performed in an Amucor execution

STANDARD PART NUMBERS

The HDMI connector shield is so developed that it has a fairly large overlap. This makes the shield almost suitable for any HDMI connector. The standard part number for an HDMI cable connector shield is 8215. Any custom sizes/part numbers on request.

SHIELDED CONNECTOR HOODS
8250

These shielded connector hoods are ideal for indoor
signal or power applications requiring robustness
and/or high EMI/RFI performance

The shielded connector hoods are ideal for indoor signal or power applications requiring robustness and/or high EMI/RFI performance in the industrial and telecommunications markets.

This D-Sub shielded hood is designed with an optimum number of pieces:

- Two half-metal covers in zamak (zinc alloy),
- Two jack screws, and a steel fiber-reinforced plastic strain relief for EMI/RFI screening and mechanical cable retention. The strain relief works with cable diameters from 4.00mm to 13.00mm. With just two screws to fasten, assembly is fast and easy, allowing for reduced labor costs.

APPLICATIONS

- Industrial Applications
- Telecommunications Applications
- Indoor Signal
- Power Applications

TECHNICAL DETAILS

Gender	All
Number of contacts	See part numbers in table below
Color	Chrome
Material insulator	Thermoplast UL94-HB

FEATURES & BENEFITS

- Metallized plastic back-shell for covering male/female D-sub connectors
- The 8250 series D-Sub shielded hoods are available in 9-, 15-, 25- and 37-position versions
- Internal cable strain relief for improved durability
- Metallized chrome plating provides effective shielding.
- Two piece cover design enables quick and easy assembly.
- Standard assembly and mating hardware included.

CONNECTOR GASKET 8200

EMI flange seals for electrical connectors

The 8200 series Connector gaskets are die-cut gaskets for EMI shielding and for grounding of a wide range of connectors. These connector gaskets are more effective in closing gaps caused by fabrication tolerances and misaligned or irregular surfaces than could be achieved with a solid flange design.

The 8200 series Connector gasket is made of die-cut 6800 Amucor shield or conductive textile, is 1 or 2mm thick, and can be provided with self-adhesive. Please note that Connector gaskets can also be produced in any desired size or shape and according to your CAD drawing.

CONDUCTIVE RUBBER (ON REQUEST)

The 8200 connector gasket is on request also available in conductive rubber. For applications where a watertight seal is required.

CONDUCTIVE RUBBER CONNECTOR GASKETS (ALTERNATIVE)

For very high performance applications where an IP-tight (waterproof) connection is required, we can make connector gaskets out of electrically conductive rubber or wire-filled silicone. For more information see 5750 series Electrically conductive rubber or 5711- 5722 series Oriented wire shield.

SILVER-FILLED CONDUCTIVE SILICONE GREASE 1110

An electrically conductive silicone grease for improving electrical connections between sliding surfaces and part

Silver Conductive Grease provides maximum electrical and thermal conductivity, proven lubrication properties, and protection from moisture, oxidation, and other environmental hazards. This system utilizes an advanced silicone lubricant that is compatible with metal, rubber, and plastic.

As with any compound, compatibility with substrate should be determined on a non-critical area prior to use.

TYPICAL APPLICATIONS

Our Silver Conductive Grease may be used for high and low power applications including:

- Lubrication of Substation Switches or Circuit Breakers
- Heat Dissipation from Transformers
- Low or Medium Speed Sliding Contacts
- Static Grounding on Seals or O-Rings

Extending the Life of Rotating Switches

BENEFITS

- High electrical conductivity
- Excellent thermal conductivity
- Provides protection against wear
- Improves electrical connections between irregular surfaces
- Remains stable in a wide temperature range;-70 to 485°F (-57 to 252 °C)
- Protects against moisture and corrosion
- Extends the life of contacts
- Very low viscosity vs. temperature change
- Safe on plastics
- Ensures electrical contact between loose or vibrating parts and small gaps

THERMAL GREASE 1100

Ceramic-filled single-component silicone
with high thermal conductivity

Thermal grease is a ceramic-filled single-component silicone with high thermal conductivity. The non-cross linked thermal compounds will not dry out and the silicone components do not leak out of the compound. The silicone-free thermal compound 1100-12 consists of synthetic, thermal polymer and is suitable for fast and effective heat dissipation.

The paste is particularly suitable for silicone-sensitive applications. The long-term stability of our 1100 series guarantees full functionality during the entire lifetime of the product. Under normal application conditions Thermal grease will not cure, dry out, or melt. Special storage of Thermal grease is not required and it can be stored without special conditions for up to 12 months. If any separation of the filler materials is noted, the 1100 Series must be mixed thoroughly before use.

SILICONE-FREE VERSION

The silicone-free Thermal compound 1100-12 consists of synthetic, thermal polymer and is suitable for fast and effective heat dissipation. This paste is particularly suitable for silicone-sensitive applications. Its long-term stability guarantees full functionality during the entire lifetime of the product. Under normal application conditions the 1100-12 silicone-free compound will not cure, dry out, or melt.

STORAGE

Special storage is not required for our Thermal grease, so it can be stored under normal climate conditions for up to 12 months. If any separation of the filler materials is noted, the 1100 Series must be mixed thoroughly before use.

CONDUCTIVE TRANSPARENT PAINT 3821

3821 Conductive transparent paint is a single component permanently conductive graphene hybrid clear acrylic coating which provides effective static elimination for electronics safe handling area and explosive atmosphere applications. Fully compliant with BS EN 61340-5-1:2007 and ATEX. Contains carbon nanotubes and graphene derivative.

Applications in lighting, windows, clear covers and lids, displays etc. Supplied as an aerosol for ease of application.

PHYSICAL PROPERTIES

Surface Resistivity at 50 micron (ASTM D257)	<10 ⁹ ohm/sq
Recommended Dry Film Thickness	20 micron
Density	1.1g/cm ³
Drying Time- Touch	20 Minutes
Static Decay (IEC TC15)	Full 12 Hours
Light transparency	87%
Coverage	6-8 m ² /liter

Aerosol Permanently Conductive Graphene Hybrid Transparent Acrylic Paint

METHOD OF USE

Surface Preparation

All contaminants must be removed from the surface. Mark areas that do not require coating. A suitable primer may be necessary on certain substrates such as Polyethylene and Polypropylene. Please contact us for a suitable primer.

Application

One or two passes are normally required to give optimum thickness and surface resistivity values depending on the degree of transparency required.

Supplied as a 400 ml aerosol

PRECAUTIONS

Highly flammable- Keep away from sources of ignition. No smoking. Keep away from heat, sparks and open flames. Keep all containers closed when not in use.

Use under well ventilated conditions, personal respiratory protection should be worn during spraying conditions. Such devices must be used in accordance with the manufacturers instructions.

Avoid contact with skin, wear protective gloves and clothing. Wash thoroughly with soap and water after use. If accidentally swallowed, seek medical advice.

CONDUCTIVE NICKEL COATING 3800

Applying electrically-conductive nickel coating 3800 series is a fast and easy method for EMI/RFI shielding/screening of plastic enclosures/housings. Your electrostatically sensitive applications can be shielded by using an electrically conductive paint containing nickel, copper or silver.

The paint comes in aerosols (Part number 3801) for easy use, but can also be supplied in tins of 5 liters, 7 kg (Part number 3805) and tins of 20 liters, 28 kg (Part number 3820) if you need larger quantities. Materials such as iron-chromium-aluminium and molybdenum disilicide are used for higher temperature applications.

Some oxide ceramics are used as conductors and semi-conductors for specialized applications. To fulfill the requirements concerning the limits of immunity and emission to interference, plastic housings and components need to be coated either fully or selectively with an electrically conductive coating. The nickel-conductive coating is contained in an air-drying acrylic resin.

It is recommended that an grounding connection is made to achieve maximum shielding performance. A suitable material for this is Part number 3201 Copper shielding tape which can simply be stuck onto the coated surface or over-sprayed with the electrically-conductive nickel coating. The coating, once it has been applied, has a mat grey textured finish.

SHIELDING EFFECTIVENESS

Please note : These values are measured under laboratory conditions. Results may vary in other situations. Please read our Guarantee.

For EMI/RFI shielding of plastic housings and plastic components

BENEFITS

- Available in aerosol for prototype and small runs (Part number 3801)
- Low surface resistivity of 0.9Ω/sq yielding high attenuation
- Enables speed and easy coverage of complex shapes
- Delivery from stock
- Cost-effective solution
- Compatible with most plastics and metal substrates, the paint meets the requirements of BS IEC 61340-5-1:2001 (Basic specification: Protection of electronic devices from electrostatic phenomena) and suitable for use in Atex hazardous environments.

PHYSICAL PROPERTIES

Color	Dark grey
Flash point (Abel closed cup- method IP 33/59)	25 °C
Recommended dry film thickness (ASTM D 4138-82)	50 microns (2 thou)
Specific gravity	1.5 g/cc
Coverage per liter at 50 microns	7-10 square meters
Drying time: touch	15 minutes
Drying time: full	12 hours
Adhesion (BS 3900 E6)	Excellent
Pencil hardness (ASTM D3363-74)	H
Shelf life	12 months
Surface resistivity at 50 microns (2 thou) ASTM D257	0.5 Ohms/square or less
Viscosity when thinned 1:1 with *** tinnings	0.6p on a cone & plate, 27-32secs on a B4 flow cup
SE(dB)	50-55

AVAILABILITY

- Part number 3801 : Aerosol 365 ml
- Part number 3805 : Tin 5 liters (7 kg)
- Part number 3820 : Tin 20 liters (28 kg)

SILVER COATING 3830

Silver-pigmented conductive coating

Silver coating 3830 is the latest in a series of coatings which provide electromagnetic compatibility (EMC). This product has been specifically designed to offer more coverage while maintaining very high conductivity.

This is a very economic means of achieving excellent shielding against emitted electromagnetic interference (EMI).

The coating retains its low resistance even after exposure to heat, cold, humidity, and salt spray. The product is simply sprayed or brushed on and then left to air-dry, and does not require either a primer or a top coat.

It is easily applied by spray or brush and is compatible with the types of plastic that are commonly used in enclosures for electronic equipment.

Available in cans of 30 grams.

BENEFITS

- Excellent conductivity
- Very smooth, bright coating
- Meets UL specification 746-C
- Overspray is easily removable with MEK
- Excellent adhesion to substrates like polycarbonate, ABS, polystyrene and PC/ABS blends

CURING

Silver coating dries in 4 to 16 hours of air drying. It may be force-dried for 20 minutes at 60-70 °C

APPLYING THE CONDUCTIVE SILVER COATING

For easy application of the conductive silver coating, we have a small sprayer that is to be connected to a compressor.

CONDUCTIVE METALIZATION 3838

For higher EMI/RFI shielding demands and larger quantities we can sputter a fully metal, electrically conductive coating onto 90% of all commonly used plastics

Sputtering is a technique used to create a thin layer of metal on a part made out of synthetic material. This technique is used for protective coatings that meet extremely high standards.

The process takes place in a high-vacuum chamber, in which argon is brought to a pressure of about 5E-3 mBar. On one wall is sputtered material that should be, this is the so-called target. Opposite the substrate. This is the material the sputtered material to be made. On the target is an applied voltage of around-500V. With these pressures in an argon-plasma of such positive ions, these ions move visibility into the negatively charged target, the collision with the target material are released and move to the other side fails. After a certain time has a thin layer. Sputtering is faster when the target behind a magnet. The magnetic field creates an electronic track with a round (or oval) forms in the target erosion pattern. Not even metals can be sputtered instead of a DC voltage is an RF voltage is used (usually 13.65 MHz). Sometimes it can / should be a gas (along with argon) to create the desired layer. This is called reactive sputtering.

By this metal ion bombardment melting the metal particle as it were, into the plastic without being affected. And a high degree of adhesion is the result.

First a thin layer of stainless steel, to prevent the softeners in the plastic affecting the shielding. Secondly a thin layer of copper for superb shielding performance. And thirdly another layer of stainless steel to avoid corrosion.

It is also possible to only metalize a part of your plastic housing. That we call selective metalization.

CONDUCTIVE METALIZATION APPLICATIONS

- Shielding/Screening (EMI, RFI)
- To meet EMC standards

SHIELDING PERFORMANCE*

■ 3838 - Conductive metallisation

QUOTATION

To make a quotation we ask you to upload a drawing or photograph of the relevant object that should be metalized together with the quantities.

ELECTRICALLY CONDUCTIVE
GLUE (SHIELDOKIT) 3980

Electrically conductive glue / Electrically conductive adhesive

Shieldokit creates an electrically and thermally conductive connection between components (electrically conductive adhesive). One of the applications is EMI shielding. The conductive glue cures at room temperature and has excellent filling properties. The viscosity of conductive glue is comparable to peanut butter, so it can be used to fill in uneven surfaces.

The product consists of a two-component epoxy-based glue containing 80% silver. It is a paste which can be applied to metals (copper, aluminium, stainless steel, brass, etc.), ceramics and most plastics.

STRUCTURE

Shieldokit is a solvent-free, silver pigmented adhesive, based on a two-component epoxy resin.

SPECIAL CHARACTERISTICS

The kit creates a strong connection with excellent conductivity. It is designed to connect temperature-sensitive components.

ORDER EXAMPLE

Series
3980

APPLICATION

Shieldokit is designed to connect parts at temperatures between 20 °C and 80 °C. The adhesive can be applied with a dispenser or by screen printing. Tools have to be cleaned immediately after use.

USED FOR:

- Gluing components that cannot be soldered
- Connections that require excellent electrical conductivity
- Connections that have to be thermally conductive
- Repairing non-solderable components
- Gluing objects to a plastic enclosure where an electrically conductive linkage is needed
- Restoration of flat cables, SMD components, etc.

SHIELDOSEAL 3991

Shieldoseal 3991 series creates a electrically and thermally conductive connection between components. Used for ESD and EMI shielding applications.

Shieldoseal is a 65-durometer adhesive sealant, filled with electrically conductive particles. The sealant will cure within 24 hours, but ultimate physical properties could take up to 72 hours to develop. Shieldoseal should adhere excellently to most substrates.

SHIELDOSEAL FOR EMI SHIELDING

One of the applications of Shieldoseal is EMI shielding. Shieldoseal has excellent filling properties, therefore almost any surface can be filled up. Shieldoseal cures quickly at room temperature. When fully cured, the substance remains as elastic as rubber and is homogeneously conductive. In addition, it especially distinguishes itself from other substances by a high level of heat conductivity. Shieldoseal is pasty and can be used to glue metals (copper, aluminium, stainless steel, brass, etc.), ceramics and most plastics.

SPECIFICATIONS

Specification	Part number 3991
Conductive particles	Nickel graphite

MESH FOIL 9000 - 9300

High performance also for lower frequency range
 (also for retro fit)

Mesh foil is the easiest way to create transparent EMI/RFI-shielded windows. You can shield existing standard displays, glass, acrylic, polycarbonate and Plexiglas windows yourself.

Mesh foil is a very fine, electrically conductive wire mesh laminated between two layers of scratch-resistant transparent foil. The wires are so fine that they can hardly be seen with the naked eye. The product is very strong but it still bends easily.

It is easy to apply Mesh foil onto glass, acrylic and polycarbonate, either by hand or with a laminator. It can be supplied with or without self-adhesive.

The foil can be made with flying mesh on the sides or around the foil. This means that a part of the very fine wire mesh is not covered in transparent foil. The exposed edges of wire mesh can be used to create an electrical connection with your enclosure. Alternatively a conductive or non-conductive adhesive can be provided along the edges or there can be a silver busbar around the circumference.

WIRE-MESH ANGLE

Mesh foil with moiré effect and without moiré effect

- The wire mesh can be placed at a custom angle to prevent the moiré effect on your display (standard is 0 degrees).
- A custom wire-mesh angle is only available with sheet styles 1 and 5

STANDARD WIRE-MESH MATERIAL

Metallized copper (i.e. copper with a coating of nickel)
 It has a dark grey color and is not shiny.

STANDARD AVAILABLE WIDTHS

We have mesh foil in standard widths of stock. The standard widths are 10, 20, 30, 40, 50, 100, 200, 250, 500 and 1000mm. Any other width/size can be produced within days. Maximum sheet/roll width 1020mm.

OPTIONS (ON REQUEST)

- Stainless steel wire mesh
- Blackened copper wire mesh
- Phosphorus bronze wire mesh

MESH FOIL APPLICATIONS

Shielding displays, windows, touch screens, monitors, LCD screens, TEMPEST.

MICRO SUCTION SILICONE ADHESIVE

For easy manual application of the foil we have developed a new Micro Suction Silicone adhesive. This adhesive has a number of advantages that make the film easy to position. Our advise, standard adhesive only for laminating machines or very experienced people else use this new Micro Suction Silicone Adhesive. Benefits of this adhesive is that it is reusable, reposition-able, it never attach permanently and is easy to apply by hand (less bubbly).

Please note : Mesh foil with Micro Suction Silicone adhesive has a thickness of 450 micron / 0.45mm.

TECHNICAL DETAILS

Type (wires/inch)	100
Wire diameter (mm)	0.050
Nominal aperture (mm)	0.204
Light transmission %	64.5

» MESH FOIL 9000 - 9300

NOTE: For LCD displays, 17°, 35° or 45° are used typically. We recommend that you request a sample of the product to determine the proper angle of the wire mesh for your application.

MESH FOIL SERIES

High performance foil for windows & displays:

No adhesive 9000 serie
 Transparent adhesive 9100 serie
 Scratch resistance 9200 serie
 Scratch resistance adhesive 9300
 Micro suction silicone adhesive 91SUC

MESH FOIL SHEET STYLES

Mesh foil with or without flying mesh

Sheet style 1 (standard Mesh foil)

Mesh foil laminated between two layers of plastic. Available with or without a transparent self-adhesive layer.

Sheet style 2

Mesh foil with flying mesh, laminated between two layers of plastic. At the top and the bottom of the mesh foil there is an exposed strip of wire mesh to make a connection with your enclosure.

Sheet style 3

Mesh foil with a 3-4mm flying mesh all around, laminated between two layers of plastic. Around the mesh foil there is an exposed strip of wire mesh to make a connection with your enclosure.

MESH FOIL WITH A SILVER BUSBAR

Sheet style 4 (most common)

Mesh foil with 3-4mm silver busbar, laminated between two layers of plastic. At the top and the bottom of the mesh foil there is a silver strip (busbar) to make a perfect electrical connection with your enclosure.

Sheet style 5

Mesh foil with a 3-4mm flying mesh, laminated between two layers of plastic. On all sides of the mesh foil there is a silver strip (busbar) to make a perfect electrical connection with your enclosure.

Sheet style 6

Mesh foil with 3-4mm silver busbar at sides and flying mesh, laminated between two plastic layers. On the left and right side of the mesh foil there is a silver strip (busbar) to make a perfect electrical connection with your enclosure.

CONDUCTIVE MESH 8900

Conductive mesh is made of polyester coated with nickel and copper. It offers excellent surface conductivity, shielding effectiveness, and corrosion resistance for a variety of applications.

Conductive mesh is made of polyester coated with nickel and copper. The base layer is copper, which is highly conductive, and the outer layer is nickel for corrosion resistance. Nickel/copper coated polyester fabric offers excellent surface conductivity, shielding effectiveness, and corrosion resistance for a variety of applications. Conductive mesh is recommended to obtain high EMI shielding at a frequency range of 500 kHz to 10 GHz.

FEATURES

- Optical grade, precision stainless-steel mesh
- Extremely delicate, lightweight and flexible
- Used for EMI/RFI-shielded windows
- Used to make windows in a Faraday tent
- DFAR compliant
- 80 to 130 OPI
- At the extreme limits of the world's wire weaving abilities
- Used in outer-space probes and leading physics laboratories

APPLICATIONS

- Electric-magnetic field shielding

COPPER GRID PET FILM 9400

PET film deposited with copper grid
and protected with a nickel layer

This transparent conductive Metal Mesh PET film is optical PET film deposited with copper grid and protected with a nickel layer. This film conducts better than our best 9900 series Transparent shielding foil and is only a fraction less transparent. This film has a conductive layer with a very fine etched mesh that is one with the transparent carrier.

Transparent conductive Metal Mesh PET film remains very high transparency, this film is extreme low resistance for high frequency EMI shielding application and is easy to apply. The copper mesh is almost invisible.

- Film thickness : 75-100um
- Transparency : >80%

STRUCTURE

Protective film + EMI shielding layer + optical adhesive (option A) + release layer. Due to the random structure none or almost no moiré effect is visible when applied to an display.

FEATURES

- Conductive layer flexible and durable, surface resistance and basic PET thickness customized available, conductive side hard coating available
- RoHS certificate

APPLICATION

- Confidential meeting room
- Computer room
- Hospital
- Display & windows EMI shielding

STANDARD SIZE

- As sheet : (550mm x 1050mm)
- In form : (550 x 1050mm conductive area)
- When you want to order 9400 series Transparent EMI shielding copper grid PET film in form, please send you CAD drawing.

Please note : top layer can be affected by acid for example from the skin. To protect the conductive layer, you can apply a transparent film or use the adhesive side on top.

Small optical defects are allowed in this product. If you require a product that has absolutely no optical defect then contact us for the "superior selected quality". Please realize that by the extreme caution act in production these products can be several times more expensive.

SHIELDED EMI GLASS 9600

A new series of EMI/RFI-shielded glass has been developed. Our EMI/RFI-shielded glass 9600 series is a float glass with a conductive coating on one side to prevent EMI/RFI.

The combination of high light transmission, near-neutral color and low electrical resistance makes this glass an ideal EMI/RFI shield for electronic displays requiring moderate shielding effectiveness and high-quality optical properties.

EMI/RFI-shielded glass is suited for outdoor use and provides excellent shielding performance from 10 kHz up to 40 GHz. In addition the coating has good scratch-resistant properties. Typical applications are medical and military LED/LCD monitors, shielded cameras, sensors and displays.

Our EMI/RFI-shielded glass provides a good balance between shielding on the one hand and optical clarity on the other.

On request EMI/RFI-shielded glass with 20 Ohms/sq is available. The disadvantage of this glass is that it has reduced light transmission and increased light reflection.

TECHNICAL DETAILS

Light transmission	84%
Electrical resistance	10-12 Ohms/sq
Temperatures	-60 / +110 °C
EMI-shielding effectiveness	24 - 98 dB (10 kHz- 40 GHz)
Available thicknesses	3, 4, and 6mm

ADVANTAGES

- Excellent EMI/RFI shielding
- High transparency
- Scratch resistant
- Suited for outdoor use
- Any shape or size available
- Can be produced or cut according to CAD drawing

OPTIONS (ON REQUEST)

- Tempered to increase impact resistance
- Anti-glare
- Laminated with highly transparent mesh foil for very high shielding performance

APPLICATIONS

- Shielded sensors
- Shielded displays, glass, or windows
- Shielded cameras
- RF shielding
- EMI shielding

» SHIELDED EMI GLASS 9600

CONTACT EDGES

EMI/RFI-shielded glass 9600 series is conductive on one side. If you want to establish a connection with the other side of the glass which is not conductive, a contact edge is needed.

The glass is also available finished with an aluminium frame for easy mounting in Faraday cages and MRI rooms. We can supply EMI-shielded glass with the following edges:

(C) With copper edges for grounding

(TC) With tinned copper edges for easy soldering and grounding

(S) With a silver busbar

(F) With an aluminium frame for shielded enclosures, Faraday cages and MRI rooms

(N) Without a special contact edge; there still is electrical conduction at the coated side of the glass.

SHIELDING PERFORMANCE

Please note: the top layer can be affected by acids, for example from the skin. To protect the conductive layer, you can apply a transparent film.

Small optical defects are allowed in this product. If you require a product that is absolutely free from optical defects, we invite you to contact us for the "superior selected quality". Please realize that due to the extreme caution needed to manufacture these products, they can be several times more expensive.

ORDER EXAMPLE

Series	Width (mm)	Height (mm)	Thickness (mm)	Contact edge
9600	Width of the visible area in mm	Height of the visible area in mm	3 : 3mm thick 4 : 4mm thick 6 : 6mm thick	C : Copper TC : Tinned copper S : Silver busbar F : With aluminium frame N : No contact edge

FARADAY CAGE WINDOWS

EMI/RFI-shielded Faraday cage windows

EMI/RFI-SHIELDED FARADAY CAGE WINDOWS

We manufacture Faraday cage windows ready for installation. These windows guarantee very high EMI/RFI/EMC-shielding performance. Faraday cage windows can be manufactured in any dimension and according to the customer's drawing.

A Faraday cage window is made up of several EMI/RFI-shielding products.

We put two layers of 9600 series EMI/RFI-shielded glass on either side of 9000 series Mesh foil to ensure very high shielding performance in a wide frequency range.

These three layers are held together by an aluminium frame for easy installation. The aluminium frame is provided with an electrically conductive 6800 series Amucor gasket to ensure good electrical contact with the Faraday cage.

Our engineers can give you the best advice for your application. Please send your drawing to info@hollandshielding.com for more information.

ORDER EXAMPLE

Product	Width (mm)	Height (mm)
Faraday cage windows	Specify the width in mm including the frame. Max 3 meter.	Specify the height in mm including the frame. Max 6 meter.

MESH FOIL WINDOWS 9700

Ready to use EMI/RFI shielded mesh foil windows

For the highest possible EMI / RFI shielding performance, a woven electrically conductive micro-structure of mesh is bonded between two layers of glass or plastic (**Single layer**). Alternatively, a single layer of Mesh foil 9000 series is fixed onto one side of a single glass or plastic window with self-adhesive (**single window**).

This can be done by laminating or edge bonding. The EMI-shielded mesh-foil windows can be provided with a silver bush bar, a electrical conductive gasket or can be supplied with a frame for easy mounting. Windows can optionally be provided with a water seal.

WINDOW TYPES

Single layer: Wire mesh fixed onto one side of a glass or plastic window
Double layer: Wire mesh bonded between two glass or plastic windows

Note that it is also possible to laminate the wire mesh under a custom angle to prevent moiré effect on for example monitors or LCD displays.

mesh foil windows can be produced up to 3 x 1.5m

LIGHT TRANSMISSION

Opacity of mesh windows is 64.5%. A lack of available light should not be a concern, since an average pair of sunglasses allows less than 9% light to come through.

APPLICATIONS

- LCD displays;
- Membrane switches,
- Touch screens
- Defense / Avionics etc.
- Devices for medical technology
- For test and measuring instruments

WINDOW MATERIALS

EMI/RFI shielded mesh foil windows can be made from your existing windows or can be supplied as a new window made of:

- Polycarbonate (**material code P**)
- Acrylic (**material code A**)
- Glass (**material code G**)

This applies both to single windows as for the stepped windows.

SHIELDING PERFORMANCE*

CONTACT EDGES

FM : Flying mesh (Single layer) Wire mesh fixed onto one side of a glass or plastic window. Flying mesh all around to make an electrical contact with the housing / Faraday cage.

FM : Flying mesh (Double layer) Wire mesh fixed between two glass or plastic windows. Flying mesh all around to make an electrical contact with the housing / Faraday cage.

CO : Copper bush-bar (Single layer) Wire mesh fixed onto one side of a glass or plastic window. Copper bush-bar all around to make an electrical contact with the housing / Faraday cage.

CO : Copper bush-bar (Double layer) Wire mesh fixed between two glass or plastic windows. Copper bush-bar all around to make an electrical contact with the housing / Faraday cage.

TC : Tinned copper bush-bar (Single layer) Wire mesh fixed onto one side of a glass or plastic window. With tinned copper edges for easy soldering and grounding.

TC : Tinned copper bush-bar (Double layer) Wire mesh fixed between two glass or plastic windows. With tinned copper edges for easy soldering and grounding.

SB : Silver bush-bar (Single layer) Wire mesh fixed onto one side of a glass or plastic window. Silver bush-bar all around to make an electrical contact with the housing / Faraday cage.

SB : Silver bush-bar (Double layer) Wire mesh fixed between two glass or plastic windows. Silver bush-bar all around to make an electrical contact with the housing / Faraday cage.

FR : with aluminum frame (Double layer) Wire mesh fixed between two glass or plastic windows. The entire window clamped in an aluminum frame for easy mounting in shielded rooms and Faraday cages.

Please note if you want to know more about the FR : wire mesh with aluminium frame we refer you to the Faraday cage windows page for more information.

NO : No contact edge (Single layer) Wire mesh fixed onto one side of a glass or plastic window.

NO : No contact edge (Double layer) Wire mesh fixed between two glass or plastic windows.

ESD FILM 9800

Electrostatic-dissipative polyester film with adhesive backing.
ANTI-static & ATEWX film

9800 ESD film is a transparent, static dissipative, self-adhesive polyester film. It includes a special coating on one side and a release film on the other side. The film can be applied to flat, insulating surfaces.

ELECTRICAL PROPERTIES

Property	Test standard	Typical value	Requirements
Surface resistance RS	EN 61340-2-3	10 ⁶ – 10 ⁸ Ω	1 x 10 ⁴ RP 1 x 10 ¹⁰ Ω EN 61340-5-1
Point to point resistance RP			

CHEMICAL RESISTANCE

Samples were immersed in the specified chemicals for 24 hours at room temperature and then examined visually.

Chemical	Surface damage	Visual evaluation
Deionized water	None	Clear
30% Sulphuric acid	None	Clear
30% Nitric acid	None	Clear
30% HCL	None	Clear
Methanol	None	Clear
Ethanol	None	Clear
Isopropyl alcohol	None	Clear
Acetone	None	Slight change
Methylene chloride	None	Clear

ADVANTAGES

- High tear strength, clear, adhesive-backed polyester film
- Permanently electrostatic-dissipative coating
- Complies with EN 61340-5-1
- Humidity independent
- Very low tribocharge generation and excellent electrostatic decay performance
- High clarity, good chemical and abrasion resistance
- Ideal for PCB manufacturing and testing
- Suitable for clean manufacturing applications (retrofitting clean room windows, etc.)
- Can be used as transparency for copies
- Thickness: 0.1mm
- Maximum sheet/roll width: 1220mm

APPLYING THE FILM - STEP BY STEP

Step 1

- Measure the usable area
- Cut the foil to size, adding 2 cm on each side (the extra will be cut off afterwards)

Step 2

- Moisten the surface to which the foil will be applied with water from a spray bottle. The surface should be wet during the entire application process.

Step 3

- Stick a piece of adhesive tape on one edge of the foil to easily pull off the transparent protection film.
- Moisten the adhesive on the foil with the spray bottle.

Step 4

- Carefully apply the wet, sticky side of the foil to the wet surface. It is important that both sides are moist.
- Smooth the film carefully to avoid creases or bubbles.

Please note: in exceptional cases, the top layer can be affected by acids, for example from the skin. To protect the conductive layer, you can apply a transparent film or use the adhesive side on top.

Small optical defects are allowed in this product. If you require a product that is absolutely free from optical defects, please contact us for the "superior selected quality". Due to the extreme caution needed to produce these products, they can be several times more expensive.

TRANSPARENT SHIELDING FOIL 9900

Transparent EMI/RFI-shielding foil

Transparent shielding foil with specialty of one side conductive meanwhile optical transmittance, is widely used for applications of EL panel, LCD EMI shielding, touch screen, flexible solar cell etc.

Transparent EMI/RFI-shielding foil 9900 series is a polyester film with a transparent conductive coating. The foil provides excellent electric and electromagnetic shielding of 40-70 dB at 10 kHz to 300 MHz and 25-40 dB from 300 MHz to 22 GHz.

In addition to EMI/RFI/EMC shielding it is also used for grounding and static discharge applications. Typical applications are transparent shielding panels for visual displays in instrumentation equipment, control panels and computers. The light transmission is 65-95%, depending on the electrical conductivity (20-5 Ohm/sq).

Due to its transparency, Transparent EMI/RFI-shielding foil 9900 series is the optimal choice for optical clarity.

For TEMPEST sites or radar/telecom protection, large dimensions are available.

If you have a drawing of a specific shape you require, please send it to info@hollandshielding.com for a quotation.

APPLICATIONS

- Transparent shielding foil for LED glass
- Transparent conductive layer for transmitting electron
- Transparent shielding foil for capacity touch key
- ITO Film with high light transmittance is used as the transparent conductive layer for transmitting electron

OPTIONS

- Finished with silver busbar
- Copper grounding contact
- Conductive self-adhesive

TECHNICAL DETAILS

- Shielding effectiveness 25- 70 dB (10 kHz – 22 GHz) 5Ω/□ & 50Ω/□
- Light transmission 65-95%
- Foil thickness 0.17mm
- Commonly used for displays, medical, military, general electronics
- Maximum sheet/roll width 1220mm

TRANSPARENT SHIELDING FOIL WINDOWS 9910

Ready-made transparent EMI-shielding foil windows for moderate EMI shielding, with good light transmittance and transparency.

Transparent EMI/RFI-shielding foil windows 9910 series consist of a strong polyester film with a layer of transparent conductive coating from our 9900 series Transparent shielding foil laminated on one side of a single glass or plastic window.

Transparent EMI/RFI-shielding foil 9910 series can also be laminated onto an existing window, if the window is brought to us, or onto any new window made of:

- Polycarbonate (**material code P**)
- Acrylic (**material code A**)
- Glass (**material code G**)

SHIELDING PERFORMANCE*

These values are measured under laboratory conditions. In other situations results may differ. Please read our Guarantee.

*For transparent shielding solutions with high shielding performance see Mesh foil 9000 series or Ready-made mesh foil windows 9700 series.

TECHNICAL DRAWING

CONTACT EDGES

Transparent EMI/RFI-shielding foil window 9910 series is only conductive on one side. If you want to make a connection with the other side of the window which is not conductive, we can add a contact edge for you. We can also supply the windows complete with an aluminium frame for easy mounting in Faraday cages and MRI rooms.

On the next page you will see the contact edges that are available for a 9910 series Transparent EMI shielding window.

» TRANSPARENT SHIELDING FOIL WINDOWS 9910

CONTACT EDGES

(C) With copper edges for grounding

(S) With a silver busbar

(TC) With tinned copper edges for easy soldering and grounding

(F) With an aluminium frame for shielded enclosures, Faraday cages and MRI rooms

MOUNTING

Connection from the conductive side of the Transparent EMI/RFI shielding foil 9900 series to a conductive mounting surface of the construction can be provided by Shielded tape 3201 series or by clamp-mounted Ultra soft shield 7400 series.

Please note: the top layer can be affected by acid, for example from the skin. To protect the conductive layer, you can apply a transparent film or use the non-conductive side on top.

Small optical defects are allowed in this product. If you need a product that is absolutely free from optical defects, please contact us for the "superior selected quality". Do be aware though that due to the extreme caution required to manufacture these products, they can be several times more expensive.

HONEYCOMB VENTS 9500

EMI shielded ventilation panels for ventilation and heating

Honeycomb vents are used to shield openings for ventilation or acoustic/visual contact. We can make these vents according to your drawing within a few days, or you can use our standard range from stock.

We can supply Honeycomb vents with frames, pre-drilled with fasteners or with flow-drilled thread holes. The standard material is aluminium which can be given a nickel finish (or any other finish you choose).

If high shielding levels are required, the use of cross-cell honeycombs is recommended. These are constructed from multiple sections of 6.35mm or 12.7mm or 26.3mm thick honeycombs within a single frame. The shielding performance will improve as air flow is decreased, but not eliminated.

For military applications we make a heavy hot-dip galvanized mild-steel version. Please contact us for more information.

Honeycombs are also frequently used as flow straighteners to create a laminar flow.

STANDARD AND CROSS-CELL VERSIONS

Standard honeycomb & Cross-cell honeycomb (for higher shielding performance)

BENEFITS

- Light weight
- High shielding performance
- Low air-flow resistance
- Reduction of turbulence

OPTIONS

- Cross-cell honeycomb for extra high shielding performance
- Slant honeycomb 30°, 45°, 60° for outdoor rainproof applications
- 45° degrees is the most common implementation
- Please note, slant honeycombs are available on request
- Polyurethane filter for dust protection
- Kick plate for mechanical protection
- Stainless steel, mild steel or brass versions
- Cell sizes 1.6mm, 3.2mm, 6.4mm, 9.5mm, 12.7mm, or 19mm (standard 3.2mm)
- Gaskets for firm connections

Approximately 95% of the honeycomb vents we produce are made to customer specifications.

MATERIAL SPECIFICATIONS

Extrusion	Aluminium alloy 6063-T1 QQ-A-200/9
Filter media	Aluminium alloy 5056, per RR-W-365
Honeycomb	Aluminium alloy MIL-C-7438
Grilles	Aluminium alloy 3003-H-14 per QQ-A-359
Finish	Chem film to MIL-C-5541 Class 1A (standard) Also available: Bright tin, Electro-less nickel or Chem film- Class 3
EMI (optional) / RFI gasket	Amucor shield 6800 or Knitted wire mesh

FRAMELESS HONEYCOMB VENTS 9505

EMI shielded ventilation panels for ventilation and heating

Honeycomb vents are used to EMI shield openings for ventilation or acoustic/visual contact. We can make these vents according to your drawing within a few days, or you can use our standard range from stock. Honeycombs are also frequently used as flow straighteners to create a laminar flow.

HONEYCOMB MATERIAL THICKNESSES

We manufacture Honeycomb material in thicknesses of 6.35, 12.7 and 26.3mm.

COMPRESSED SIDES

The 9505 series Frameless Honeycomb ventilation panels can be made with compressed sides. This has the advantage that the ventilation panel easily remains in place in the opening of your electronics housing. This also provides better shielding performance.

BENEFITS

- Light weight
- High shielding performance
- Low air-flow resistance
- Reduction of turbulence
- Can be made round or rectangular shaped

MATERIAL SPECIFICATIONS

Extrusion	Aluminium alloy 6063-T1 QQ-A-200/9
Filter media	Aluminium alloy 5056, per RR-W-365
Honeycomb	Aluminium alloy MIL-C-7438
Grilles	Aluminium alloy 3003-H-14 per QQ-A-359
Finish	Chem film to MIL-C-5541 Class 1A (standard) Also available: Bright tin, Electro-less nickel or Chem film- Class 3

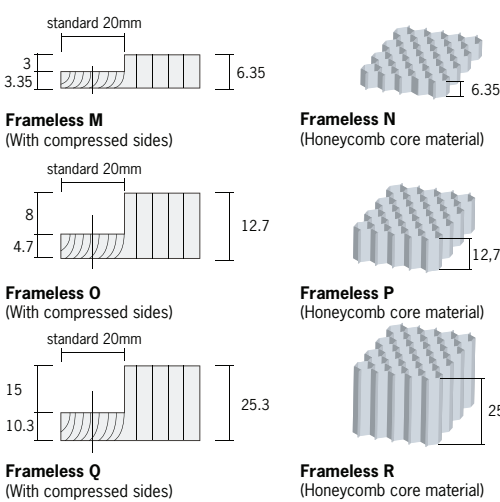

DIMENSIONS

Frameless honeycomb vent panels can be produced very accurately in any desired size. Specify in the quotation the dimensions you want.

ORDER EXAMPLE

Series	Shape	Type
9505	RO : Round RE : Rectangular	M : 6.35mm thick with compressed sides O : 12.7mm thick with compressed sides Q : 26.3mm thick with compressed sides N : 6.35mm thick P : 12.7mm thick R : 26.3mm thick

TYPES

EMC DUST FILTER VENTILATION
PANELS 9510

EMC Dust filter ventilation panels are used to shield
openings for heating and ventilation against
undesirable electromagnetic waves

EMC dust filter ventilation panels consist of several layers of aluminium foil mesh encased in a rigid aluminium frame, pre-drilled, or with fasteners made to the customer's specifications, or with flow-drilled thread holes.

Approximately 95% of the 9510 series EMC Dust filter ventilation panels are made to customer specifications complying with an order. These panels can be treated with a variety of finishes to provide corrosion protection. Air filter oil can be applied to the aluminium filter to assist in dirt and dust retention.

By default, frames can be provided with an additional 6800 series Amucor or 7000 series Standard shield EMI gasket.

ATTENUATION LEVELS (DB)

APPLICATIONS

- Electronics enclosures
- Air conditioning units
- Fan housings
- EMC racks

ADVANTAGES

- Light weight
- High shielding performance
- Very low air-flow resistance
- Reduction of turbulence

STANDARD DELIVERY TIME

Most standard-sized EMC dust filters are available from stock. When they are not in stock or when you need a custom-made filter, delivery is within two weeks.

» EMC DUST FILTER VENTILATION PANELS 9510

STANDARD DIMENSIONS

Our EMC dust filter ventilation panels are usually custom made for each client. However, some common dimensions are in stock. In the table of standard dimensions below some common types of EMC dust filter ventilation panels are specified to illustrate the required information. Hole diameter P is 3.5mm by default, with other dimensions possible on request. Also available with screw apertures or inserts.

EMC WOVEN MESH VENTILATION PANEL 9520

EMC Woven mesh ventilation panel used for heating, air flow for cooling and ventilation in electronic enclosures

EMC Woven mesh ventilation panels are used for heating, air flow for cooling and ventilation in electronic enclosures without compromising the shielding integrity of an enclosure.

Aluminium EMC Woven mesh ventilation panels consist of 3 layers of pleated aluminium woven mesh, trapped between aluminium kick-plates, in a rigid aluminium frame, pre-drilled or with fasteners made to your specifications or flow drilled thread holes.

The 3 layers of pleated wire mesh are separated by the pleats being of different height enabling the vent to have a high dust holding capacity.

Approximately 95% of the 9520 series EMC Woven mesh ventilation panels are made to customer specifications, and are all made to comply an order.

These panels can be treated with a variety of finishes to provide corrosion protection or improve conductivity. Air filter oil can be applied to the aluminium filter media to assist in dirt and dust retention. Panels with a gasket groove have a knitted monel wire mesh gasket as standard. Other frames can be provided with an additional EMI Gasket.

Standard delivery time: less than one weeks.

OPTIONS (ON REQUEST)

- EMI gasketing
- Environmental sealing
- Kempass (RoHS) aluminium passivation finish
- With kickplate

BENEFITS

- Light weight
- High shielding performance
- Very low air-flow resistance
- Reduction of turbulence

EMC GASKET OPTIONS

- 1200 series Metal knit gasket (Only frames with a gasket groove)
- 5711-5722 series Orientated wire shield gasket
- 1200 series Metal knit gasket with a Neoprene sponge carrier 2.4mm thick
- 2000 series Beryllium Copper finger strip

* Other gasket options on request

DESIGN AND CONSTRUCTIONAL TIPS

In your design, you can take into consideration moisture and dust protection through:

- Color coated frame (leave a part free of coating for contact)
- External overhang for rain protection
- Holes for drainage
- Aerodynamic drag
- Additional EMC gasketing
- Try to avoid round vents because its complexity and therefore expensive production
- Prevent holes in corners of the frame because of the rigidity of the frame when compressing the gasket
- If specifying captive inserts in both sides of the frame off-set the position by 10mm minimum

HONEYCOMB FAN SHIELD 9530

Honeycomb ventilation grids specifically designed for standard sized fans in e.g. computer cases

A range of low cost EMC vents for use with standard fan size fans. The Honeycomb fan shield 9530 series are designed to provide EMI shielding and maximum air flow without degrading the fan output.

These vents provide a low cost option to perforated metal when airflow rates are critical. A beautiful high-gloss acrylic frame is fitted with one layer of 6.35 or 12.7 thick honeycomb material and an optional Amucor conductive gasket to ground the honeycomb to the metalwork. The vents have 4 countersunk holes to suit standard fan mounting.

Honeycomb Fan Shield in almost all sizes corresponding to industry standard fans with standard 4-hole mounting.

DUST SCREEN (ON REQUEST)

Dust screens consisting of multilayer expanded aluminium can be added, but airflow will be restricted.

SHIELDING PERFORMANCE*

Shielding performance is achieved from 1/8 cell aluminium honeycomb panels with compressed mounted in a square shaped flat Mu-ferro plate with a circular cut-out on the inside. The contact with the housing is made with an amucor shielding gasket cut into the correct shape of the Honeycomb fan shield.

Performance below have been measured with honeycomb specifications 1/8 Cell size, 1/4 Thick.

EMP VENTILATION PANELS 9540

These drilled ventilation panels are designed for high performance applications, where high attenuation is required particularly in the H (magnetic) field.

In contrast to our competitors where EMP ventilation panels are made from a composition of materials, this is a solid healed ventilation panel. This ensures that no transitions between materials are made and that the shielding performance is many times higher.

APPLICATIONS

Ventilation panels are designed for use in electronic enclosures where good air flow is required for cooling and ventilation but where EMC compliance must be ensured.

Typical applications are:

- EMI screened rooms
- Military air conditioning units
- High performance communication shelters
- EMP installations/bunkers
- Availability

All EMP ventilation panels are individually built to your specification, size, configuration, style, fixing method and finish. These ventilation panels can be supplied with fixing holes to aid mounting.

MICROWAVE ABSORBER
FOAM 3500

Used at higher frequencies than traditional shielding
and can also be used with other EMI/RFI shields to
extend frequency range

These absorbers can be used at higher frequencies than traditional shielding and can also be used with other EMI/RFI shields to extend frequency range.

The microwave absorbers can be installed easily with pressure-sensitive adhesive (PSA), often directly onto high-frequency board-level components, to absorb unwanted radiated and surface-wave EMI/RFI and to meet FCC requirements without shielding.

Our 3500 series Microwave absorber foam is RoHS compliant. It is a coated, open-cell foam and is used as a microwave absorbing material, especially for applications with frequencies of **1 to 17 GHz**. The product acts like a free-space resistor to incoming electromagnetic energy.

The 3500 series Microwave absorber foam is available in a **soft** and a **hard** variant. The type you choose depends on the force you want the foam to be able to withstand, if necessary.

Microwave absorber products can solve EMI/RFI problems without additional shielding and enable advanced technologies including automotive radar, military, and commercial wireless applications.

MICROWAVE ABSORBER FOAM, SOFT VERSION
Standard sheet

Temperature specification: - 40°C to +100°C
Hardness shore: 40 +/- 20
Die-cut: Material can be cut into any shape according to customer's drawing. For a quote, please send a drawing with the desired quantities to info@hollandshielding.com

TYPICAL APPLICATIONS

- Antenna hats
- Test boxes
- PCB shielding/housings
- Military applications
- EMI reduction
- Antenna pattern shaping
- Radar cross reduction

VERSIONS

- A **soft version** which can be easily compressed to 75% is available as die cut or in the form of sheets. The soft microwave absorber sheets are available with thicknesses of 3, 5, and 15mm and with or without PSA. (Pressure-sensitive adhesive).
- A **hard version** which can carry more weight and keeps its shape and position more easily is available with a thickness of 6mm. Other thicknesses are available on request.

VHF FERRITE ABSORBER
TILES 3600

Ferrite absorber tile is the industry standard solution and exhibits excellent overall performance versus cost

Our 3600 series Ferrite absorber tile is the standard solution for industry applications. It is an attractive solution for new anechoic chambers or for upgrading existing rooms for radiated-emission and immunity tests. These tiles are used when relatively high absorption and a compact solution are required (-15 to -25 dB <100MHz). It is an excellent, reliable and compact solution for attenuating reflections in shielded enclosures.

3600 VHF FERRITE ABSORBER TILE

The VHF ferrite absorber tile is made of sintered ferrite and shaped like a square tile. The dimensions are 100 x 100mm with a thickness of **6.7mm**.

The tiles are subject to precise mechanical tolerances on all sides, minimizing gaps between adjacent tiles to ensure maximum performance.

The tiles provide excellent electromagnetic absorption performance in the VHF band for EMC anechoic chambers.

MATERIAL CHARACTERISTICS

Characteristics	Symbols	units	3600 series
Initial permeability	μ_{iac}		1000 ±20%
Relative loss factor	$\tan\delta/\mu_{iac}$	$\times 10^{-6}$	25 (0.1MHz)
Saturation flux density	Bs	mT	360 (1194A/m)
Remanence	Br	mT	100
Coercivity	Hc	A/m	12
Relative temp. factor (20°C ~60°C)	$\alpha\mu_r$	$\times 10^{-6}/^{\circ}\text{C}$	3 ~ 5
Curie temperature	Tc	°C	>100
Density	δ	kg/m³	5.0x 10³
Resistivity	ρ	MΩ*m	>1.0

CHARACTERISTICS

- No risk of explosion, flammability, reactivity or health hazard

FEATURES

- Absorption of lower electromagnetic waves
- Wide frequency and fire resistant
- An electromagnetic absorbing material
- Easy and quick to assemble
- Precision-machined tiles for seamless installation
- No physical degradation over time
- Ultra thin, so takes up little space
- Highly weather resistant

APPLICATIONS

- EMC electromagnetic-wave anechoic chamber
- Electromagnetic-wave reflection of buildings
- Electromagnetic-wave absorption
- Electromagnetic reflection problems
- ANSIC63.4, CISPR16-1-4, IEC61000-4-3
- Prevents TV ghost

PERFORMANCE CHARACTERISTICS (3600-M)

(Normal incidence reflection loss)

Reflective attenuation vs. frequency

Please note: These values are measured under laboratory conditions. Results may vary in other situations. Please read our Guarantee.

» VHF FERRITE ABSORBER TILES 3600

PART NUMBERS AND PRODUCT SPECIFICATION

EMC-chamber dedicated, ferrite tile is produced with a traditional ceramic manufacture process.

Please note: These ferrite tiles are very thin, which can save more space for chamber installation. The tiles are non-flammable and they can be fully suitable for high-power test chambers. Ferrite tiles can be screwed directly on to the shielded housing; installation is very easy. Even after many years the effect of the ferrite tiles still will not be degraded

Part number	Addition	Dimensions			Weight		Typical Reflection Loss (dB)						
		A (mm)	B (mm)	C (mm)	D (mm)	Kg/sq m	30MHz	100MHz	200MHz	300MHz	500MHz	700MHz	1GHz

UHF FERRITE ABSORBER TILES
3610

Ferrite absorber tile is the industry standard solution and exhibits excellent overall performance versus cost

Our 3610 series Ferrite absorber tile is the industry standard solution and exhibits excellent overall performance versus cost. It is an attractive alternative to traditional, large, foam-type absorber materials for new anechoic chambers or for upgrading existing rooms for radiated emission and immunity measurements.

These tiles are a quite recent development. They are used when relatively high absorption is required together with a compact solution (up to -37 dB @ 800 ~ 900MHz). They also provide a reliable and compact solution for attenuating plane-wave reflections in shielded enclosures.

- For the best economical choice, see our most common 3600 series VHF ferrite absorbers. These are the most frequently used choice for Anechoic chambers.

3610 UHF FERRITE ABSORBER TILE

UHF ferrite absorber tile is made of a sintered ferrite in the shape of a square tile. The dimensions are 100 x 100mm or 200 x 200 mm with a thickness of 4.0mm.

The tiles can easily be screwed on to a wall individually, inserting screws through the 10mm hole, or mounted by means of adhesive. The tiles are optionally available in panel format. The tiles are surface-ground on all sides to precise mechanical tolerances, minimizing gaps between adjacent tiles to ensure maximum low-frequency performance.

The tiles provide excellent electromagnetic absorption in the UHF band. The product works well in a Dark box for mobile phone inspection and EMC anechoic chambers, and it is also suitable for high buildings to prevent TV ghost or for the absorption of RFID.

FEATURES

- Absorption of lower electromagnetic waves in the range of 30MHz ~ 1GHz
- Wide frequency and fire resistant
- An electromagnetic absorbing material
- Easy and quick to assemble
- No physical degradation over time
- Ultra thin, so takes up little space

APPLICATIONS

- Dark box for mobile phone inspection
- Prevention of radio communications disturbance
- Prevention of TV ghost
- Prevention of UHF RFID-readers interference

CHARACTERISTICS

- Standard weight : 214 gr.
- Standard dimensions : 100 x 100 x 4.0 mm
- Main hazards : No risk of explosion, flammability, reactivity or health hazard

DOUBLE LAYER FERRITE ABSORBER TILES 3620

Ferrite absorber tile is the industry standard solution and exhibits excellent overall performance versus cost

Our 3600 series Ferrite absorber tile is the industry standard solution and exhibits excellent overall performance versus cost. It is an attractive alternative to traditional, large, foam-type absorber materials for new anechoic chambers or for upgrading existing rooms for radiated emission and immunity measurements. These tiles are a quite new development. They are used when relatively high absorption is required together with a compact solution (-15 to -25 dB @ <100MHz)- approximately 4 to 6mm vs 2400mm for foam absorbers. They also provide a reliable and compact solution for attenuating plane-wave reflections in shielded enclosures.

3620 DOUBLE-LAYER FERRITE ABSORBER TILE
3620 Double-layer ferrite absorber tile is especially designed for small EMC anechoic chambers, to get excellent electromagnetic absorption performance in 30MHz to 2GHz.

The 3620 Double-layer ferrite absorber tile contains a 21mm gap between two pieces of 100 x 100 x 3mm sintered ferrite tile and has a total thickness of 27mm. It can be glued on to a wall easily.

Due to the special double-layer design, these tiles provide a wider frequency range than single-piece ferrite tiles, even in a small anechoic chamber or a dark box for mobile phone inspection.

PERFORMANCE CHARACTERISTICS
(Normal incidence reflection loss)
Reflective attenuation vs. frequency

Please note : These values are measured under laboratory conditions. Results may vary in other situations, please read our Guarantee.

FEATURES

- Absorption of lower electromagnetic waves
- An electromagnetic absorbing material
- Suitable for 30MHz to 2GHz (see return loss graph)
- Easy and quick to assemble
- No physical degradation over time
- Good performance for a small-sized chamber
- Good performance at low frequencies

APPLICATIONS

- Dark box for mobile phone inspection
- Prevention of radio communications disturbance
- Prevention of TV ghost
- Prevention of UHF RFID-readers interference
- EMC anechoic chambers

CHARACTERISTICS

- Standard weight : 410 Gr.
- Standard dimensions : 100 x 100 x 27mm
- Main hazards: No risk of explosion, reactivity or health hazard

3620	270

WIDE BAND HYBRID PYRAMID EM ABSORBERS 3630

For the construction of a small anechoic chamber to get a larger space than one could build with pyramid-shaped absorbers

The 3630 series Wide-band hybrid pyramid EM absorber is an 80mm high absorber that measures 100mm x 100mm. It shows good absorption performance in the wide band between 30MHz and 18GHz when combined with 6.3mm thick Ferrite absorber tiles (Part nr. 3600-63). The hybrid pyramid absorber is made out of a carbon-loaded polystyrene and is tuned for perfect performance over Ferrite absorber tiles.

Due to this special characteristic, the product is suitable for building a small anechoic chamber to get a bigger space than build with form pyramidal absorber. Also, it can increase the frequency from 1GHz to 18GHz as compared to a standard anechoic chamber that only has Ferrite absorber tiles.

PERFORMANCE CHARACTERISTICS
(Normal incidence reflection loss)
Reflective attenuation vs frequency

Please note : These values are measured under laboratory conditions. Results may vary in other situations, please read our Guarantee.

***Notice**
Information supplied in these data sheets is based on independent and laboratory tests which Holland Shielding Systems BV, hereafter referred to as HSS believes to be reliable. HSS has no control over the design of customer's product which incorporates products, therefore it is the responsibility of the user to determine the suitability for his particular application and we recommend that the user make his own test to determine suitability.

FEATURES

- Performs very well in wide band (30MHz to 18GHz)
- Small size (100 x 100 x 80mm)
- Long service life
- Only 8 cm high, so room space can be used efficiently
- So strong that an adult can stand on it
- Does not deteriorate even if it gets wet
- 10 times more durable than conventional products
- By slant molding, stable quality is assured
- Easy to install on wall surfaces without adhesives being required

CHARACTERISTICS

- Standard weight : 783 gr
- Standard dimensions : 100 x 100 x 80mm
- Main hazards : No risk of explosion, reactivity or health hazard

APPLICATIONS

- Electromagnetic-wave anechoic chambers
- Compact EM-wave anechoic chambers
- Floor-type electromagnetic-wave absorbers
- Installation on shielded doors
- Suitable for EMS high-power irradiation test
- Suitable for small anechoic chamber (approximately 3 meters)
- Anechoic chambers for antenna
- For actual use in various GHz bandwidth

PU FOAM BASED PYRAMID ABSORBERS 3640

These PU foam based pyramid absorbers are the most popular solution for 3m, 5m and 10m EMC chambers in the market

SOLUTION FOR 3M, 5M AND 10M EMC CHAMBERS IN THE MARKET

These absorbers are the most popular solution for 3m, 5m and 10m EMC chambers in the market. They are composed of pyramidal, full tip SAM or truncated SMT pulsing the matching layer to separate the pyramidal part from the ferrite part. Through optimization, this product has a superb performance across 30MHz to 18GHz. The ferrite performs from 30MHz to 1GHz and the foam performs above 1GHz.

Prototypes are made and the design is tested. Results become part of a valuable feedback loop for refining our design further. Broadband Pyramidal Absorber is a low density polyurethane foam, filled with high loss dielectric material in open cell structure and finished with blue paint.

The general base size is 60 cm x 60 cm with 50mm to 1200mm height pyramidal. It's flexible and light weight, can be attached on the wall easily. It is a high performance broadband RF absorber and widely used for Anechoic Chambers.

REFLECTION LOSS UNDER VERTICAL INCIDENCE (-DB @ GHZ)

CHARACTERISTICS

- Such absorbers have a pyramid-shaped appearance, with blue color (it can be selected as request)
- Pliable and flexible, the pyramids won't bend in long-term use, and its absorbing properties won't be changed within 10 years.
- Oxygen index $\geq 29\%$ (GB/T2406-93), which belongs to flame retardant B2 level (GB8624-1997)
- Good environmental performance, all raw materials can meet the environmental requirements, no volatile, no smell and non-toxic.
 - Working conditions: general indoor application
 - Long-time working temperature: $-50^{\circ}\text{C} \sim 90^{\circ}\text{C}$
 - Short-time working temperature: $-100^{\circ}\text{C} \sim 120^{\circ}\text{C}$
 - Relative humidity: $55\% \pm 15\%$
 - Frequency range: 30MHz \sim 110GHz

3640	PU foam based pyramid absorbers with a height of 300mm can be delivered from stock

PU FOAM BASED FLAT ABSORBERS 3650

These absorbers can be used at higher frequencies than traditional shielding and can also be used with other EMI/RFI shields to extend frequency range

These absorbers can be used at higher frequencies than traditional shielding and can also be used with other EMI/RFI shields to extend frequency range. The microwave absorbers can be installed easily with (PSA) pressure sensitive adhesive, often directly onto high-frequency board-level components to absorb unwanted radiated and surface wave EMI/RFI and meet FCC requirements without shielding.

PU foam based flat absorbers has the advantages of light quality and good performance, which can be applied for the site near the antenna, and it can be used to reduce the side-lobe, improve the front-to-back ratio, absorb the clutter, eliminate the interference, as well provide the camouflage and concealment of the military facilities.

REFLECTION LOSS UNDER VERTICAL INCIDENCE (-DB @ GHZ)

CHARACTERISTICS

- Such absorbers have a flat appearance, with black color (it can be selected as request), it is clean and soft.
- Oxygen index $\geq 29\%$ (GB/T2406-93), which belongs to flame retardant B2 level (GB8624-1997)
- Good environmental performance, all raw materials can meet the environmental requirements, no volatile, no smell and non-toxic.
- Installation method: Direct adhesive paste and the absorbers with self-adhesive tape can be also offered.
- Working temperature: $-60^{\circ}\text{C} \sim 90^{\circ}\text{C}$ relative humidity: $55\% \pm 15\%$ Frequency range: 1GHz \sim 18GHz

* CF refers to "common flat absorber"
* ML refers to "Multi layer broadband flat absorber"

ORDER EXAMPLE

Series	Height (mm)	Layers
3650	50	270
PU foam based flat absorbers with a height of 50mm can be delivered from stock.		CF : Common flat absorber (Single layer) ML : Multi layer broadband flat absorber

Please note: Other sizes and thicknesses on request. For the data above 1GHz, it is obtained by far-field RCS test method (GJB2038A-2011) The performance data listed in the above table is the guaranteed data, and the measured data would be equal to or better than the guaranteed data. Certification: CE ROHS

PU FOAM BASED WEDGE ABSORBERS 3670

The main advantage is to reduce the back scattering of pyramid absorbers and obtain higher quietness of quiet zone

PU foam based wedge absorbers has the properties similar to the pyramid absorbers with same height, it also has excellent performance in 100MHz-110GHz. It is mainly applied in large compact anechoic chamber and tapered anechoic chambers, the main advantage is to reduce the back scattering of pyramid absorbers and obtain higher quietness of quiet zone.

CHARACTERISTICS

- Such absorbers have a wedge-shaped appearance, with blue color (it can be selected as request)
- Pliable and flexible, the pyramids won't bend in long-term use, and its absorbing properties won't be changed within 10 years.
- Oxygen index $\geq 29\%$ (GB/T2406-93), which belongs to flame retardant B2 level (GB8624-1997)
- Good environmental performance, all raw materials can meet the environmental requirements, no volatile, no smell and non-toxic.
- Working conditions: general indoor application
 - Long-time working temperature: $-50^{\circ}\text{C} \sim 90^{\circ}\text{C}$
 - Short-time working temperature: $-100^{\circ}\text{C} \sim 120^{\circ}\text{C}$
 - Relative humidity: $55\% \pm 15\%$
- Frequency range: 30MHz \sim 110GHz
- Installation method: it generally use an environmental protective adhesive to paste the absorbers on the shield body; when the absorbers height is below 500mm, Velcro installation can be applied; furthermore, we can also adopt the fasteners to install the absorbers, which would facilitate the replacement of absorbers and the relocation of chambers.

PU FOAM BASED HYBRID ABSORBERS 3660

Almost has the same performance in low frequency as the pyramid absorbers (with tips); but its performance in high frequency might be slightly declined

The 3660 series PU foam based Hybrid absorbers product is similar to our standard pyramid absorbers, but having the tips of the pyramids truncated. This saves space in small chambers and provides a more rugged product, eliminating the possibility of tip breakage.

PU foam based Hybrid absorber in an appropriate combination in a EMC anechoic chamber and is an ideal absorber treatment for Immunity Test Chambers (EN 1000-4-3 and equivalent specifications).

Removing 20% from the tips of pyramid absorbers (low carbon), it is the Truncated absorbers (without tips), which almost has the same performance in low frequency as the pyramid absorbers (with tips); but its performance in high frequency might be slightly declined. The advantage of such absorbers is bringing a larger net space, eliminating the tips droop, and it has a stronger resistance capability against mechanical damage.

ORDER EXAMPLE

Series	Type	Height (mm)
3660	<div>T : Truncated P : Pyramid</div>	<div>Specify the height of the desired absorber in mm</div>

CHARACTERISTICS

- It used to have a truncated appearance (some customers might want to keep the tips)
- It has blue color (more color for optional), it is pliable and flexible
- It must be matched with ferrite tiles, to get a better broad-band performance during 30MHz- 18GHz
- There shall be matching design between ferrite tiles layer and absorbers layer, to further develop the bandwidth.
- Oxygen index $\geq 29\%$ (GB/T2406-93), which belongs to flame retardant B2 level (GB8624-1997)
- Good environmental performance, all raw materials can meet the environmental requirements, no volatile, no smell and non-toxic
- Installation method: it generally uses fasteners installation or Velcro installation, which would facilitate the replacement of absorbers and the relocation of chambers. For small anechoic chambers, absorbers can be directly pasted by an environmental protective adhesive.

WORKING CONDITION:

- Long-time working temperature: $-50^{\circ}\text{C} \sim 80^{\circ}\text{C}$
- Relative humidity: $55\% \pm 15\%$

REFLECTION LOSS UNDER VERTICAL INCIDENCE

Please note: For the data below 500MHz, it is obtained by low-frequency coaxial test method (GJB5239-2004); while for the data above 1GHz, it is obtained by far-field RCS test method (GJB2038A-2011). NONFLAMMABLE HIGH POWER HANDLING ABSORBERS 3680

Nonflammable high power handling EM absorbers for anechoic chambers

Non-flammable high power handling absorber, is a non-woven fabrics based hollow broadband microwave absorbers with fire retardant and microwave absorption impregnated.

It is mainly used in microwave anechoic chambers, and it can be used to shield the test equipments inside the chamber; under vertical incidence and oblique incidence conditions, it has better broadband performance; meanwhile, it has a good scattering attenuation and isolation performance, and it can be applied for all parts of the anechoic chambers.

It is a hollow broadband microwave absorber which is made of a heat resistance non-woven fabric which is dipped with flame retardants and microwave absorbing agents, and it is mainly used in microwave anechoic chamber and covers the test equipments. Under the condition of normal incidence and oblique incidence, it has better broadband performance as well as scattering and isolation attenuation performance. It can be used in any part of the chamber.

PRODUCT SPECIFICATION AND PART NUMBERS

Part number	Base size (mm xmm)	Pyramid quantity per unit	Unit size A x C x B (mm xmm xmm)	Standard weight (Kg/m²)
3680-190	500x500	81	190x65x50	10
3680-300		64	300x60x50	13
3680-500		64	500x60x76	19
3680-690		36	690x80x90	20

3680-1500		9	1500x163x205	29
3680-1600		9	1600x163x220	29

CHARACTERISTICS

- Good flame retardant characteristics, it won't burn when it encounter the fire, it has oxygen index $\geq 60\%$ and flame retardant B1 level.
- Excellent high power handling capacity, it can withstand the power irradiation (continuous wave) $\geq 6\text{kW/m}^2$
- It adopts keel mounting method, without any adhesive.
- The absorbing performance of such absorbers is equal to or better than the PU foam absorber with same height.
- It adopts inorganic flame retardants and microwave absorption, no volatile, no smell and non-toxic; it is stable in long-term use.
- Working conditions:
 - Long-time working temperature: $-50^\circ\text{C} \sim 120^\circ\text{C}$
 - Short-time working temperature: $-100^\circ\text{C} \sim 150^\circ\text{C}$
 - Relative humidity: $55\% \pm 15\%$

HIGH POWER HANDLING PYRAMID ABSORBERS 3690

Microporous pyramid absorbers can support inside and outside ventilation circulation

High power handling microporous pyramid absorbers can support inside and outside ventilation circulation, which would further improve the power handling capacity of such absorbers; it is mainly applied in high power shield cabinet, ventilation vents of anechoic chambers, and etc.

CHARACTERISTICS

- Good flame retardant characteristics, it won't burn when it encounter the fire, it has oxygen index $\geq 60\%$ and flame retardant B1 level
- Excellent high power handling capacity, it can withstand the power irradiation (continuous wave) $8-10\text{kW/m}^2$
- It adopts keel mounting method, without any adhesive

RUBBER FLAT NARROWBAND ABSORBER 5795

Rubber flat narrowband absorber is a thin flexible narrow band resonating radar absorbent

Our rubber flat narrowband absorbers (also known as Pinpoint types, microwave absorbers) attenuate 10-20 dB at one particular frequency. These narrow band absorbers are mainly designed for UHF (300MHz ~ 3GHz range) and SHF (3~30GHz) frequency range.

AREA'S OF APPLICATION

- For radar signature management by covering the ship mast
- To avoid the ground reflections at open area test sits (OATS)
- To eliminate interferences and unnecessary reflection.
- To avoid the cross talk between transmitter and receiver antenna

CHARACTERISTICS

Frequency	1- 40 GHz
Material thickness	Determined by resonant frequency (applied center frequency)
Temperature resistance characteristics	-50 °C- 150 °C
Environment	Unlimited
Power handling capacity	Above 2kW/sqm
Absorption properties	Resonance point attenuation $\leq 18\text{dB}$

ORDER EXAMPLE

Series	Width (mm)	Length (mm)	Thickness (mm)
5795			
Specify the width in mm		Specify the length in mm	0.7 : 0.7mm 1.3 : 1.3mm 1.8 : 1.8mm 2.5 : 2.5mm 3.0 : 3.0mm 6.8 : 6.8mm

APPLICATION

The rubber flat narrowband absorber is suitable for the occasions that require thin sheet and without broad-band; when used, it shall have metal substrate, and it shall be close pasted; it is mainly applied for the reflecting of metal components inside the radar cabin, the substrate inside the radar cabin can help to suppress electromagnetic interference and etc

EMI ABSORBER SHEETS 5780

The EMI flexible absorber sheets, developed for electromagnetic-wave absorption and noise suppression, can eliminate noise effectively

The EMI flexible absorber sheets, developed for electromagnetic-wave absorption and noise suppression, can eliminate noise effectively. EMC/EMI problems are solved by attaching noise-suppression sheets simply on the parts that are sources of noise.

FEATURES AND ADVANTAGES

- Very flexible and easy to handle
- Can be delivered in any shape, size and/or thickness
- Optionally available as a custom-made tube
- Can be cut according to the customer's drawings
- Provides effective EMI suppression in a wide frequency range (1MHz to 18GHz)
- Changes the magnetic flux path to avoid interference with other components or surrounding cables
- Reduces the eddy current when the magnetic flux is close to metal
- Non-conductive adhesive backing (UL recognized) available
- Effective in preventing resonance and suppressing coupling
- High surface resistance (>106 Ω)
- Easy and fast to process due to self-adhesive

USAGE EXAMPLES

Example 1: Wrapped around a cable

Example 2: Applied to a flat cable

Example 3: Applied to an integrated circuit (IC) top

Example 4: Applied between integrated circuits

Example 5: Applied to case and between boards

APPLICATIONS

- RFID (Radio Frequency Identification) systems
- NFC (Near-field communication)
- Wireless power chargers (WPC / Qi)
- Computers (NB / desktop / tablet) and peripherals
- Digital Products
- Mobile phones / smartphones / phablet
- Wireless equipment
- EMI-shielding box / black box
- Between printed circuit boards
- On IC's, processors, and controllers
- On cables that need high flexibility

5780 EMI flexible absorber sheets, reflection loss measurement

THE VARIATION OF RESPONSE FREQUENCY WHEN RFID TAG + 5780 + METAL (REFERENCE) :

1. The response frequency is become lower when 5780 thickness become thick but the signal strength with little difference.

2. The response frequency is increase when metal attached, but the signal strength is smaller if the 5780 thickness is thinner. It means the metal affect more when the 5780 is thinner.

— C1-2.5mm (-9.62dB@11.33MHz) — C1-0.5mm (-8.19dB@12.13MHz)
— C1-2.0mm (-9.36dB@11.35MHz) — C1-0.33mm (-8.19dB@12.43MHz)
— C1-1.5mm (-8.87dB@11.45MHz) — C1-0.25mm (-8.35dB@12.60MHz)
— C1-1.0mm (-8.54dB@11.68MHz) — C1-0.2mm (-8.41dB@12.68MHz)
— C1-0.6mm (-8.11dB@11.95MHz) — Tag only (-10.13dB@13.60MHz)

— C1-2.5mm (-6.35dB@11.73MHz) — Tag only (-10.13dB@13.60MHz)
— C1-2.0mm (-5.81dB@11.80MHz) — C1-0.5mm (-2.22dB@13.63MHz)
— C1-1.5mm (-4.70dB@12.05MHz) — C1-0.33mm (-1.54dB@14.58MHz)

HIGH PERFORMANCE EMI ABSORBER SHEETS 5790

EMC/EMI problems can be solved by attaching
EM absorber and noise suppression sheets
simply next to noise sources

The high-performance EMI (electromagnetic interference) absorber and noise suppression series can eliminate noise effectively. This product is made with magnetic metal powder. Through the distributed and mixed process, there is a Micro-wave absorbing sheet made of rubber sheets. As increasing use of wide frequency band, this products absorb and control unnecessary electronic microwaves (noise). You can solve EMC/EMI problems by attaching EM absorber and noise suppression sheets simply on the part of noise sources.

The high performance EMI absorber sheet series is designed for applications where high noise suppression is needed in a broad frequency range. Examples are applications in the construction of medical and military devices.

CONSTRUCTION

ADVANTAGES

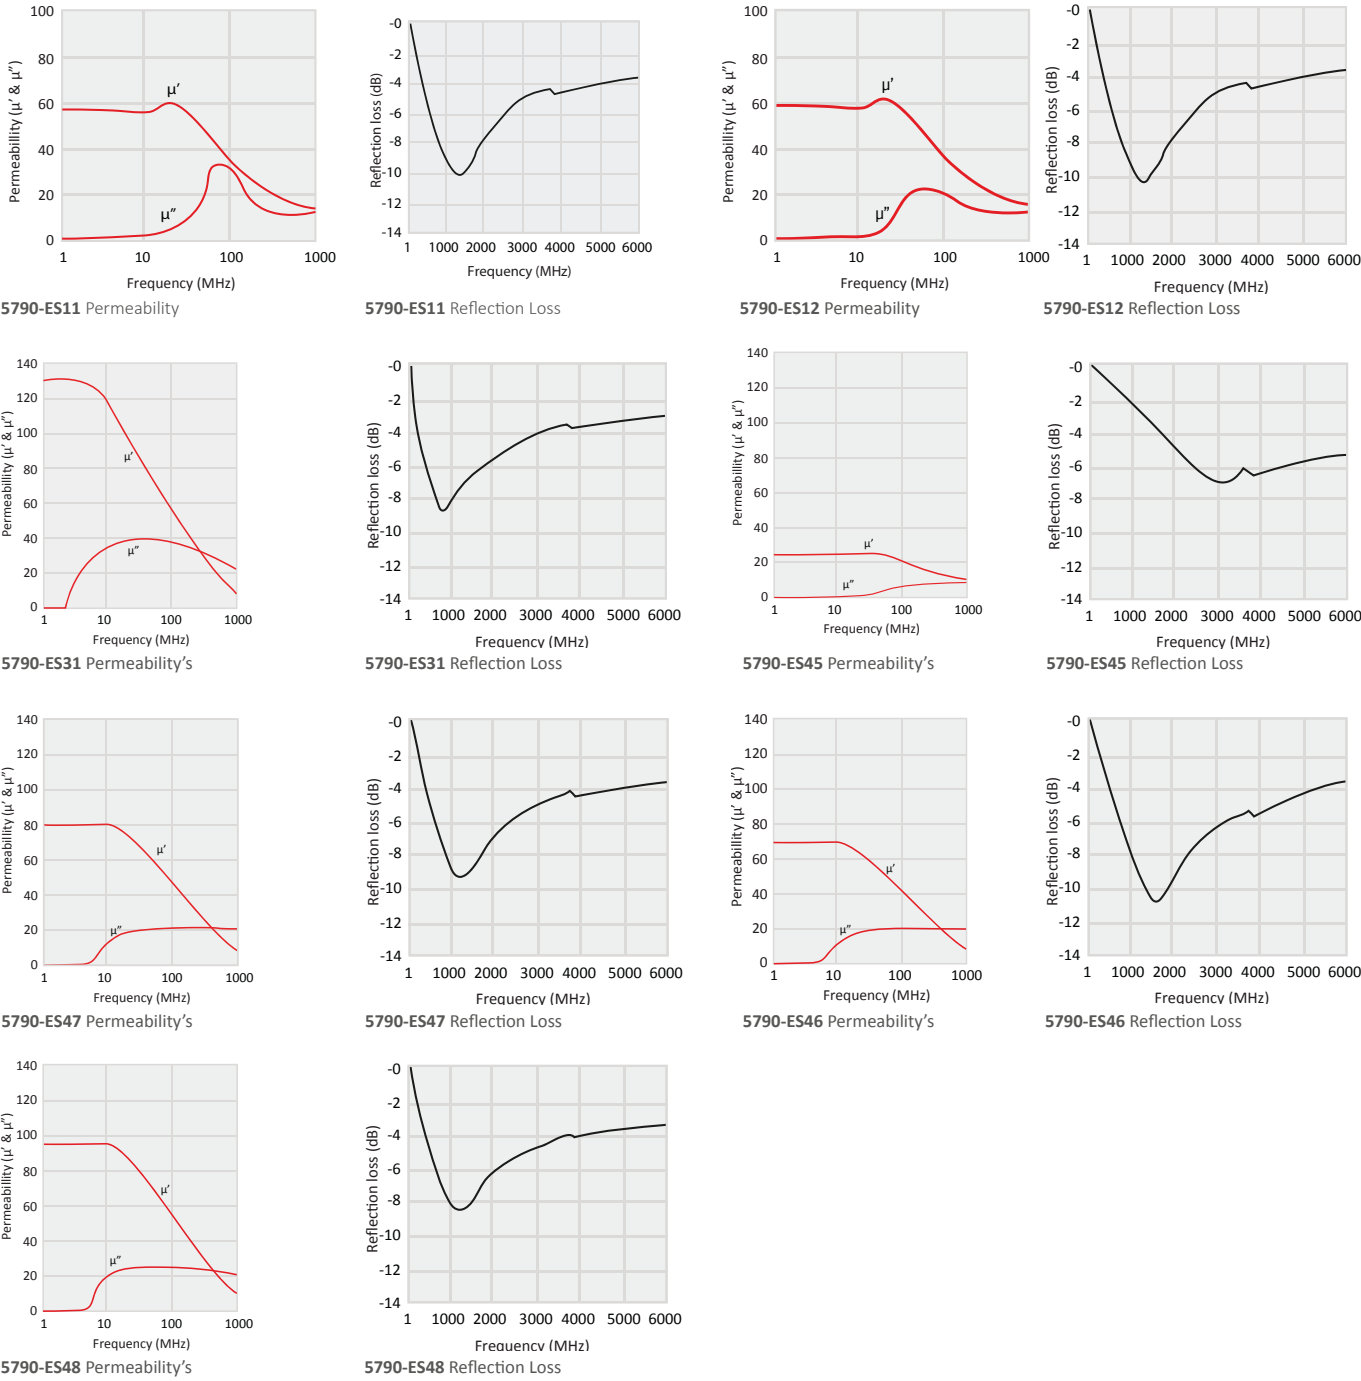

- Perfect suppression of radiation noise
- High electrical resistance (1x109Ω)
- Flexible and easy to handle/apply with single-side adhesive, even on a rounded side
- Can be manufactured in many shapes, sizes and thickness according to CAD drawing

UTP DATA LINE FILTER 7894

EMI Shielded room and Faraday cage feedthrough for high speed RS232C/Ethernet/ UTP communication links

Our 7894- Fiber-optic Ethernet converter set offers a shielded-room feedthrough for high-speed RS232C/Ethernet/ UTP communication links. The Ethernet fiber Media Converter is used to convert a RS232C/10/100 Base-T signal to a 10/100Base/RS232C optical signal, so you can use your internet connection or for example your video-camera connection inside or outside the Faraday cage while maintaining over 140dB of room attenuation.

The set consists of two shielded fiber-optic converters, waveguide passage and 5 meters of fiber-optic cable.

An optical-fiber guiding light (high frequency) does not guide magnetic and electric waves. So signals from within the cage are not transported to the outside of the cage, or vice versa, because the optical fiber does not function as an antenna.

FEATURES

- The transmission of optical signals can be done through a single fiber since this allows for twice as much data transmission compared with a twin fiber type
- Auto negotiation function allows UTP port to auto select 10M or 100M and Full Duplex or Half Duplex.
- UTP port supports MDI / MDI-X auto crossover
- Supporting flow control
- Supporting 1552 Byte packet
- Built-in protection against lightning can prevent great damage to the converter caused by the induction of a lightning stroke.
- Design of internal or external power supply for selection by users

ORDER EXAMPLE

Series

7894

Fiber optic ethernet converter set + waveguide

SPECIFICATIONS

- Operating standards: IEEE802.3u, 10/100Base-TX and 100Base-FX
- MAC address table: 1K
- LED: Power, FX 100, FX Link/Act, TX 100, TX FDX, TX Link/Act.
- Power: AC 110V- 220V to DC 5V; DC48V to DC 5V
- Ambient temperature: 0- 50 °C
- Storage temperature:-20- +70 °C
- Humidity: 5%- 90%

CONNECTOR

- UTP: RJ-45 10/100Mbps
- Fiber: SC 100Mbps

CABLE

- UTP: Cat. 5 UTP (max. distance up to 100 m)
- Fiber (single mode): 8.3/125, 8.7/125, 9/125, 10/125µm (max. distance up to 90 km)

FLOW CONTROL

- Full Duplex: IEEE802.3x
- Half Duplex: Back-pressure

DIMENSIONS

- Internal power: 30x110c140mm
- External power: 26x70c93mm

AUDIO, DVI & USB DATA LINE FILTER 7895

Shielded room feedthrough for high speed DVI and USB 2.0 communication links

A shielded-room feedthrough for high speed DVI and USB 2.0 communication links, the DVI USB 2.0 data line filter is used to convert a DVI and USB 2.0 signal to a optical signal, which subsequently goes into the Faraday cage through a waveguide.

The DVI USB 2.0 data line filter is optimized for state of the art signals such as DVI and USB. The transmission distance of up to 500m is completely lossless.

With the DVI USB 2.0 data line filter 7895 in place, you can use DVI or USB 2.0 communication links for example for interface supports, keyboard, mouse, tablets, touch screens, sound modules, printer, smart-card readers, serial adapters and a video-camera connection inside or outside the Faraday cage while maintaining over 140dB of room attenuation.

The set consists of two shielded fiber-optic converters, a waveguide passage and 5 meters of fiber-optic cable.

ADVANTAGES

- 500 m distance
- 1920 x 1200 resolution
- Without loss of quality or room attenuation
- Transparent USB 2.0
- Full HD video performance
- DVI extension
- Transparent USB 2.0
- Plug and play installation
- Single-fiber duplex cable required
- Small, so can be used between a big Faraday cage and small mobile shielded boxes

*Notice

Information supplied in these data sheets is based on independent and laboratory tests which Holland Shielding Systems BV, hereafter referred to as HSS believes to be reliable. HSS has no control over the design of customer's product which incorporates products, therefore it is the responsibility of the user to determine the suitability for his particular application and we recommend that the user make his own test to determine suitability.

FEATURES

- Automatic Plug and play installation
- USB keyboard / mouse / touch screen
- Supports DDC / EDID monitor information
- Local and remote monitor
- Transparent USB 2.0 extension
- Full HD 1080p 1920x1080 @ 60Hz
- 19" rack mountable
- Ultra compact: up to 4 channels in a 19" 1U
- Sound and RS232 via external USB adapters

The set consists of two shielded fiber-optic converters, a waveguide passage and 3 meters of fiber-optic cable.

An optical fiber guiding light (high frequency) does not guide magnetic and electric waves. This means that signals from within the cage are not transported to the outside, because the optical fiber does not act as an antenna.

Please note: Memory stick/hard disk support is available by switchable USB memory option (on request).

USB 3.0 CONVERTER SET 7896

The 7896 USB 3.0 converter set converts usb 3.0 signal to a light signal and passes the signal through a waveguide into the shielded room

The 7896 USB 3.0 converter set converts USB 3.0 signal to a light signal and passes the signal through a waveguide into the shielded room.

The 7896 USB 3.0 converter set provides true USB 3.0 extension at up to 5Gbps over 300 m of OM3-300 multi-mode fiber optics, without the need of additional software drivers. A true plug-and-play solution, the 7896 USB 3.0 converter set is compatible with all leading operation systems. Note: backward compatibility with USB 2.0/1.1.

FEATURES

- Extends USB 3.0 super-speed, backward compatibility with USB 2.0/1.1. X Operates with USB 3.0 hosts
- Supports all USB devices up to 5Gbps
- Distance of up to 300 m
- Number of devices can be increased using additional USB hubs
- True plug and play
- Software drivers required
- Works with operating systems: Windows 7, Windows 8, Windows 10
- Low RFI / EMI profile for sensitive applications
- Power adapter at host is not required
- Surface-mountable

Performance		
Local unit	Upstream port	usb3.0 Type B Male
	Downstream port	USB3.0 SFS*1
Remote unit	Upstream port	USB3.0 SFS*1
	Downstream port	4-port

HIGH PERFORMANCE
FILTERS 8010

High performance filters for the highest shielding demands

The 8010 series High performance filter is a superior filter housed in a three compartment casing with bolted covers and accessible terminals that achieves 100 dB insertion transmission loss at 14 kHz and above.

The circuit is designed as a symmetrical double-circuit with high quality rod cores providing inductance. These cores do not saturate due to their large air gap and they are insensitive to asymmetrical load.

Foil capacitors ensure a long operating life by their self healing feature even after voltage transients A seamless fixing of the filter casing to the shielded room is very important to ensure correct operation. The filter is housed in a casing that has a base flange which provides stable mounting and excellent earthing when bolted to the shielded room via the mounting bolts.

This series is offered as a two line filter (phase and neutral) or as a four line filter (three phases and neutral). The neutral line is always attenuated and all conductors are decoupled from each other. This allows the conductors to operate independently without attenuation loss.

Please note: EMP protection is available on request.

MOUNTING

These protections are designed for mounting on the penetration panel or directly on the non-painted wall of the Faraday cage. Mounting terminals dependent on the amount of power. Please see connection in the product range table.

APPLICATIONS

- EMC test laboratories
- Anechoic chambers
- Tempest rooms
- MRI screened facilities

Rated current available from 6 amps to 3000 amps in both single and three phase versions. Filters are ideally suitable for applications where the very highest performance is demanded.

GENERAL CHARACTERISTICS

For a clean mains supply into a shielded room, high performance filters are indispensable. Usually, these filters are directly mounted on the shielding wall. It is recommended to route filtered lines into the shielded room (Faraday cage) through the wall with an optional flexible metal conduit.

- Mains filter for single and three phase systems
- Insertion transmission loss 100 dB @ 14 kHz

**HIGH PERFORMANCE
POWER LINE FILTERS 8020**

For shielded rooms where the effective
suppression of radiation emission is required

The 8020 series High performance power line filter are capable of providing an radiated transmission loss of 100 dB at 14 kHz up to 40 GHz. The leakage current is in milliampere level and the voltage drop is less than 1V.

APPLICATIONS

- Shielded rooms
- Shielded chambers
- Anechoic chambers
- Military applications
- Medical applications

ADVANTAGES

- Can be delivered EMP-proof
- Suitable for use under extreme conditions (military applications)
- Wear resistant
- Insensitive to corrosion

POWER AND SIGNAL LINE FILTERS 8030

Power and signal line filters designed for high performance shielded cabinets, shielded rooms and anechoic chambers

The 8030 series power line filters with line legs at load side is capable of providing an radiated transmission loss of 100 dB at 14 kHz up to 40 GHz. The leakage current is in milliam-pere level and the voltage drop is less than 1V.

APPLICATIONS

- Shielded rooms
- Shielded chambers
- Anechoic chambers
- Military applications
- Medical applications

ADVANTAGES

- Applicable in very low frequency (VLF) applications
- Can be delivered EMP-proof
- Suitable for use under extreme conditions (military applications)
- Wear resistant
- Insensitive to corrosion

POWER LINE FILTERS FOR GROUND WIRE 8040

If you are concerned about noise in your environment, ground filter is a good way to mitigate the problem. Shielding performance: 100dB @ 14 kHz - 40 GHz (MIL-STD-285)

Just like power lines, ground wires connect the entire facility together. All human-reachable surfaces of electrical equipment must be at ground potential for safety reason. While safety practices are always a good idea, a side effect of such connection is that if one piece of equipment injects noise into ground for whatever reason (mis-wiring, improper design, poor maintenance, etc.). This noise propagates throughout the facility and enters other equipment. Ground filters are capable of reducing this noise while maintaining all safety practices.

If you are concerned about noise in your environment, ground filter is a good way to mitigate the problem.

PRODUCT RANGE

Type	IR (A)	Outline drawing	Shielding Effectiveness (dB)
8040-16	16	1	100dB, 14k-40GHz

POWER LINE FILTERS FOR SHIELDED CABINET 8050

Designed for well grounded shielded cabinet with rated voltage of 250VAC/50Hz. Shielding performance: 100dB @ 14 kHz - 40 GHz (MIL-STD-285)

The 8050 series Power line filters for shielded cabinets is a superior filter housed in a two compartment casing that achieves 100 dB insertion transmission loss at 14 kHz till 40 GHz. The circuit is designed as a double- circuit with high quality rod cores providing inductance. These cores do not saturate due to their large air gap and they are insensitive to asymmetrical load.

This series of power line filters is specially designed for well grounded shielded cabinet with rated voltage of 250VAC/50-60Hz. It is compact and in compliance with Class B and C standards for shielded cabinet. The 8050 series is particularly suitable to be used on MRI rooms.

This series is only offered as a two line filter (phase and neutral).

AVAILABLE DIMENSIONS

Type	IR (A)	I Leakage (mA) *	Shielding Effectiveness (dB)
8050-2-6	2x6	30	100dB, 14k-40GHz
8050-2-16	2x16	30	
8051-2-6	2x6	<3

SIGNAL LINE FILTERS 8090

This series of signal filters are used for telephone, data communication, control and fire alarm

These signal line filters are specially designed to use for telephone, fax, fire detection, video signal and AC/DC switch signal with a rated current between 0.3A and 1A. The filter is in compliance with standards specified by national military class C and D shielded room and anechoic chamber.

APPLICATIONS

- Telephone
- Fax
- AC/DC
- Switch signal
- Fire detection
- Door opening buttons
- All other application using the band pass specified in the table below

PRODUCT RANGE

Type	Rated voltage	Rated current	Outline drawing	Band pass	Typical applications
8090-2-0.3-20 kHz	250VDC	2x0.3A	1	0-20 kHz	Telephone, fax
8090-2-1-100 kHz	250VAC	2x1A	1	0-100 kHz	Control, Voice, ..
8090-1-1-6 MHz	100VDC	1x1A	2	0-6 MHz	Video signal.
8090-2-1-6 MHz	100VDC	2x1A	3	0-6 MHz	Special fire alarm

Note: Specify number of control line and current volume if control lines are more than 2 or current is bigger than 1A.

PERSONAL PROTECTION

Protection for people with EMI/RF sensitivity

Anti-EMI/RF E-Smog personal protection offers functional, effective shielding against electromagnetic fields. This shielding clothing may be worn at work in an environment with high electromagnetic radiation but can also be used for personal protection against electromagnetic radiation at home.

The EMI/RFI-shielded clothing is made of the same material as our Faraday tents, is very strong and is easy to wash. The electromagnetic radiation protection clothing can be made in any size and even according to a drawing you supply. Optionally, the clothing can be provided with pockets, gloves, and/or face protection.

SHIELDING GLOVES

For those of you who experience (or want to prevent) ES symptoms in your hands Holland Shielding Systems has developed electromagnetic protective gloves (SG).

APPLICATIONS
 Some people experience ES symptoms when using a computer keyboard, laptop, cell phone, DECT phone or other electronic devices.

These gloves are also used in industry for static control when working with delicate static sensitive components and can even be used for TENS applications. Grounding is not necessary for Faraday Cage shielding effect, but is necessary for static control. Also useful on touch screens like an iGlove.

TECHNICAL DETAILS
 These gloves form a conductive enclosure and effectively shield radio waves and electric fields. Soft, light weight, stretchable, and offering good tactile sensitivity. These gloves offer the conductivity of silver with lycra-like stretch.

This medical grade silver plated 76% Nylon, 24% elastic fiber fabric offers the unique ability to stretch in all directions. Silver coating is 99.9% pure. Silver/grey color. Very unique!

- Shielding performance: 30-50 dB, tested from 1-10 GHz
- Temperature range: -30 to 90 °C
- Surface resistivity is < 0.5 Ohm/sq.

VERSIONS

- Single layer version for standard performance
- Double layer version for high performance. Shielding effectiveness up to 100dB reduction in a high frequency range.

ORDER EXAMPLE

Product	Layers
SG	1 : Single layer version (standard performance) 2 : Double layer version (high performance)

SHIELDED SOCKS

These socks start with a polyester fiber which is twisted with pure Silver fibers, then knit into the sock shape, giving it a very high conductivity (only a few Ohms across) and good shielding performance throughout. Reasonably soft and stretchy with ribbed cuff. Socks include a 1.7mm male snap near the cuff. Great for RF shielding, grounding, and can even be used for TENS applications. Hand washable. Fits shoe size 5-10.

ORDER EXAMPLE

Product
SCK

HEAD BALACLAVA

Very comfortable radio frequency shielding for the head and thyroid region. Medical grade, silver coated stretchy fabric provides very good microwave shielding. Washable and very soft.

Can be worn many ways: covering nose/mouth or not. Covering neck or not. Size of eye opening can be adjusted to your preference. Shielding performance decreases over time. Lightweight, stretchy, anti-bacterial fabric is the key. One size fits all.

ORDER EXAMPLE

Product
HPB

» PERSONAL PROTECTION

SHIELDED SLEEPING BAGS

The shielding sleeping bags are made of conductive textile, which gives a reliably protection against HF radiation, caused by cell phones, DECT-phones, Baby monitors, Wifi, TETRA, etc. The shielding sleeping bags offer a optimal protection for electro-sensitive people or if you feel uncomfortable under elevated radiation. Perfect for hotel beds, where RF/ NF radiation is usually very high.

We produce two variants of the EMI shielding sleeping bag. A **single layer** shielded sleeping bag which contains a single layer of conductive textile on the outside and soft textile on the inside. A **double layer** shielded sleeping bag which contains a double layer of conductive textile on the outside and soft textile on the inside.

EXPLAINING REDUCTION OF RADIATION

When you are not familiar with reduction in dB's we explain it short for you here.

- 40 dB is 100 times reduction of the corresponding signal/frequency
- 60 dB is a reduction of 1000 times and so on

As an alternative to a sleeping bag we offer shielding tents (Faraday tents).

ORDER EXAMPLE

Product	Layers
Sleeping bag	<div>1 : Single layer shield- ed sleeping bag</div> <div>2 : Double layer shielded sleeping bag</div>

SHIELDED SHOES

These shielding shoes are perhaps the easiest way to stay grounded when you are at home inside you house or on the go in your car. Static dissipation to zero volts is accomplished in less than 0.1 seconds on any conductive surface. Keeps body voltage low.

DIMENSIONS

The shielded shoes can be supplied in any size. Send your shoe size so we can offer the right size

ORDER EXAMPLE

» PERSONAL PROTECTION

FACE PROTECTION

Face burning from radio-frequency radiation? Maybe it's your eyes that burn, or the lips?

This lightweight EMF face protection covers a large area while permitting total air flow. Can't fog up. Visor is made of a special wire mesh which is durable and gives good shielding performance (30 dB). Easy to see through, but it is a mesh so not suitable for fine work. Visor flips up when needed. Plenty of room inside for prescription glasses or sunglasses. Elastic headband stretches to fit most head sizes.

ORDER EXAMPLE

Product
FP

SHIELDED BURKA

Shielding your head just got easier. Slip this sheer and roomy burka over your had and it will provide 99.7% shielding across the frequency range 10 MHz – 3GHz and >94% at 5.6 GHz. These frequencies include Wi-Fi, Cordless phones, phone masts, mobile phones and even TV and radio broadcasts.

This extreme high shielding burka is made from our patented 'Conductive fabric which is a super-shielding material' double Silver-plated Nylon. Providing the highest level of microwave shielding. Quick to put on, easy to take off. One size fits all.

ORDER EXAMPLE

Product
Shielded burka

RECOMMENDED WASHING INSTRUCTIONS

The carbon-suffused monofilament nylon used in our antistatic garments is sensitive to heat, alkali, acids, softeners and bleach. In order to prolong the ESD/EMI-shielding properties of the garments, please act according to the following instructions:

1. Wash in cold or lukewarm water, no more than 40°C (100°F) with neutral liquid laundry detergent, e.g. Persil liquid silk & wool, Daz liquid, Ariel color & style- powder or liquid etc.
2. Do not use laundry detergents which contain chlorine bleach and/or softeners.
3. In case of severe soil or grease, stronger liquid detergents can be used if they do not contain any chlorine bleach .
4. Do not bleach; do not use alkali, acid or fabric softeners. Do not dry clean.
5. Hang dry or dry in a dryer at 50°C (120°F) or less.
6. Usually no ironing will be needed. Nevertheless, the garments can be ironed at medium temperature, max. 150°C (300°F).

RFID CARD SHIELDING

Card details theft is rampant. This simple yet effective shielded RFID card jacket blocks the transmission of high frequency waves (13.56 MHz or UHF 860-960 MHz) used to read “smart” (contact-less) RFID cards. Prevents unauthorized access to your RFID card information.

RFID CARD SHIELDING

RFID have serious disadvantages such as risks to privacy and undetected fraud. All this can be done while you think you have stored your RFID card 'safe'. Theoretically, it is even possible from 3 to 4 meters to read a chip and / or edit it.

Card details theft is rampant. This simple yet effective shielded RFID card jacket blocks the transmission of high frequency waves (13.56 MHz or UHF 860-960 MHz) used to read “smart” (contact-less) RFID cards. Prevents unauthorized access to your RFID card information.
 How it works

Hackers can now walk past you and steal your credit/debit card numbers without ever touching you or your wallet using inexpensive RFID scanners or a cell phone. This new crime is called "Crowd Hacking" and the RFID card shielding is a easy to use, high-tech defense against this crime.

The RFID card shielding uses our E-Field shielding technology to make your information invisible to hackers without batteries or charging.

RFID have serious disadvantages such as risks to privacy and undetected fraud. All this can be done while you think you have stored your RFID card 'safe'.

ADVANTAGES

- RFID card shielding sleeves prevent electronic pick-pocketing
- Protects your ID & credit card info
- Protect your credit card number, expiration dates,
- Birth dates, names, addresses, photos and much more
- Sleeves block high-tech hijacking scanning equipment waves

RFID CARD SHIELDING CLIP

Blocks RFID reading of a single iClass, TWIC, LincPass, PIV, CAC, or other identification card. The RFID card shield clip meets the FIPS-201 shielding requirements. The RFID card protector puts the user in control of where and when their id card is read.

These RFID card shield clips are listed on the United States Government Services Administration (GSA) FIPS 201 approved products list as meeting the requirements of preventing the reading of contact-less RFID chips.

The RFID card shield clip is designed to hold and shield one card. Our Squeeze to read technology allows the card to be read by simply squeezing the tabs at the top. Release the tabs and the card is shielded again. Perfect when your hands are full, or when you are wearing gloves!

PRODUCT SPECIFICATIONS

- Holds 1 ISO7810 ID-1 form factor (standard credit card size) contact-less smart card
- Blocks RFID chips in cards from being read without permission
- Ergonomic design allows user to present card to reader with one hand without removing the card
- User can easily insert and remove card from holder with one hand
- Holds one ISO7810 ID-1 form factor contact-less smart card
- Shields ISO 14443/15693 and EPC Gen 1/Gen 2 contact-less smart cards and RFID tags
- Physically protects card, weather- and water-resistant
- Dimensions: 4-1/2" x 2-3/4"

ORDER EXAMPLE

Product

PASSPORT SHIELD

Identity theft is rampant. This simple yet effective shielded passport jacket blocks the transmission of high frequency waves (13.56 MHz or UHF 860-960 MHz) used to read “smart” (contact-less) passports. Prevents unauthorized access to your passport information.

DIMENSIONS

Passport Jacket Dimensions:

- 3-3/4 x 5-1/8 inches, fits most passports.
- 9.5 x 13.0 cm, fits most passports

Each jacket holds a single passport. Undetectable RFID barrier is embedded in the jackets, and adds almost no weight or bulk. Keeps your passport clean, safe, and secure. Passport slips in and out easily when it's time to present it to authorities. Get one for each traveler.

SHIELDING POUCH STANDARD

Lightweight, Flexible and High Performing
RF / EMI Shielding Pouches

The shielded pouches protect portable transceivers from RF & microwave interference and/or emissions. The shielding pouch can also be used to shield a full wallet with content.

The RFID cards in your wallet can no longer remotely be read with the pouch closed around it. Our pouches are lightweight and flexible. They are made to attenuate and prevent signals from entering or leaving the pouch.

These shielding pouches are suitable for everyday use, for example for people with electro allergy and for storing RFID cards to prevent abuse.

The shielding pouches are made with a highly conductive silver/copper/nickel RoHS compliant fabric on the inside.

PERSONAL PROTECTION - SHIELDING POUCH

SHIELDING EFFECTIVENESS

Prevents cell phones, PDA's, smartphones, laptops and GPS units from logging onto an active network.

Field tests have shown an average of 99.99% signal attenuation. In practice, our shielding pouches proved to have a better design and better materials than pouches made by the competition. These pouches are built to last and can be reused over and over again with minimal shielding degradation.

OPTIONS

- Hanging loop
- RF shielding window for ventilation and/or visibility
- Custom I/O connector plates
- Pad printing / screen printing / custom embroidery

INDUSTRIES

- Commercial wireless
- Industrial wireless
- Aerospace and defense
- Cellular forensics
- Computer forensics
- Homeland security
- Law enforcement
- Military
- Personal protection (electro smog / electro allergy)

APPLICATIONS

- Mobile device forensics
- Cyber forensics
- Secure facilities
- Government facilities
- Crime scene investigations
- Industrial and corporate espionage
- Fieldwork

» SHIELDING POUCHES STANDARD SIZE

3 different phone pouch

Leather tablet and wallet pouch

Laptop, medium leather & tablet army pouch

STANDARD SIZES

Part number	Size (width x height)	Material	Description	Application
Pouch - Phone 1	115 x 155	Imitation leather	Rollover closure, shielded compartment and a non shielded	Phone, RFID Devices, Credit Cards
Pouch - Phone 2	125 x 175	Imitation leather		
Pouch - Phone 3	120 x 160	Army fabric		
Pouch - Wallet (small)	195 x 100	Black fabric	Rollover closure, shielded compartment and a non shielded	Electronic Car Keys, RFID Devices, Credit Cards
Pouch - Tablet 1	225 x 285	Imitation leather	Rollover closure, shielded compartment and a non shielded	RFID Devices, Credit Cards, portable devices – cell phones, tablet
Pouch - Tablet 2	225 x 285	Army fabric	Rollover closure, shielded compartment, zipper at the back with non shielded compartment	RFID Devices, Credit Cards, portable devices – cell phones, tablet
Pouch - Medium	230 x 175	Imitation leather	Rollover closure, shielded compartment, zipper at the back with non shielded compartment	RFID Devices, Credit Cards, portable devices – cell phones, pagers, iPhones, Blackberry
Pouch - laptop (large)	390 x 400	Imitation leather	Rollover closure, shielded compartment, zipper at the back with non shielded compartment	RFID Devices, Credit Cards, laptop, tablet, multiple cell phones, PDA's, Passports, GPS Navigation Units

The shielded compartment allows you to safely store your RFID cards, and the non shielded compartment allows you to still be accessible on your mobile.

ORDER EXAMPLE

Product	Type
Pouch S	Phone 1 : 100 x 190 imitation leather Phone 2 : 170 x 230 imitation leather Phone 3 : 390 x 395 Army look Wallet (small) : 195x100 black fabric Tablet 1 : 225x285 imitation leather Tablet 2 : 225x285 Army look Medium : 230x175 imitation leather Laptop (large) : 390x400 imitation leather

SHIELDING POUCH TEXTILE VERSION

Lightweight, flexible and high shielding
performing pouches for electronic car keys,
RFID devices, credit cards and so much more...

The pouches protect portable transceivers from RF & micro-wave interference and/or emissions. The shielding pouch can also be used to shield a full wallet with contents in the wallet.

There are RFID cards inside that are no longer remotely can be read with the pouch. Our pouches are lightweight and flexible. They are made to attenuate and prevent signals from entering or leaving the pouch. It is generally used for professional purposes, i.e. for RF research, optionally in combination with a window for usage and vision of the device inside. The shielding pouches are made with a double layer conductive silver/copper/nickel RoHS compliant fabric (textile version).

STANDARD SIZES

Part number	Interior dimensions (mm)		Construction	Application
	Width	Length		
pouch-100-100	100	100	Single rollover closure	Electronic Car Keys, RFID Devices, Credit Cards
pouch-100-170	100	170	Double rollover closure	Portable devices – cell phones, pagers, iPhones, Blackberry
pouch-100-170	170	200	Double rollover closure	Multiple cell phones, PDAs, Passports, GPS Navigation Units
pouch-240-320	240	320	Double rollover closure	Mobile tablet devices, iPads, RFID tagged documents
pouch-400-320	400	320	Double rollover closure	Laptops, Computers, Multiple cell phones, PDAs, Blackberrys, or iPhones
pouch-400-370	400	370	Double rollover closure	Notebook Computers, Multiple cell phones, PDAs, Blackberrys, iPhones, Ultramobile PCs

Please note: Custom sizes from 40mm x 80mm (Length x Width) up to larger sizes of 1200 x 1200mm can be designed to fit your specifications

SHIELDING FOR CARS

To protect the people inside the car from the powerful
electromagnetic fields and radio frequencies

SHIELDING FOR SIGNAL-JAMMER CARS

A signal-jammer car have to be shielded to protect the people inside it from the powerful electromagnetic fields and radio frequencies that are emitted by the jammers on the car's roof.

We are specialized in electromagnetic shielding of signal jammer cars. These shields are available for any model and type of car and can be custom made according to your wishes.

Such shields are also used by people who are allergic to electromagnetic radiation or to prevent the computer and telecommunications can be intercepted.

APPLICATIONS

- Computer and cell-phone forensics
- Military field or embassy use
- Radar-jammer protection
- Electromagnetic allergy / electro-smog

SHIELDING PERFORMANCE* (DB)

EASY TO FIT TRANSPARENT SHIELD

Especially for military and embassy applications we have developed a easy to fit transparent window.

This window which is equipped with a very fine electrically conductive mesh protects the driver of the vehicle from the many different fields and frequencies spread from the antennas on the roof of the car.

Mounting the shield for signal-jammer cars is achieved easily, by means of suction cups to the windows. The shield we supply will be customized for your make and model car.

LIGHT TRANSMISSION

Opacity of mesh windows is 64.5%. A lack of available light should not be a concern, since an average pair of sunglasses allows less than 9% light to come through.

The pictures below gives an impression of the view through the shielding window once the shield for signal-jammer cars has been mounted.

REQUEST A QUOTE

If you would like to request a quote for a car shielding, please send us the model and type of the car and the amount of cars concerned.

OPTIONS

- Hanging loop
- RF shielding window for ventilation and/or visibility
- Custom I/O connector plates.
- Pad Printing / Screen Printing / Custom Embroidery

APPLICATIONS

- Mobile device forensics
- Cyber forensics
- Secure facilities
- Government facilities
- Crime scene investigations
- Industrial and corporate espionage
- Fieldwork

SHIELDING EFFECTIVENESS

Base material has an average shielding effectiveness of-85dB in the range of 30 MHz to 1 GHz and an average-80dB in the range of 1 GHz to 11 GHz.

SHIELDED FARADAY TENTS

Cost-effective instant Faraday tent

The EMI/RFI-shielded Faraday tents are made of highly conductive, lightweight, and ultra-strong textile. By default the Faraday tents are delivered with multiple ropes so they can be easily attached to a ceiling, or they can come with a self-standing frame.

Typical applications are EMC experiments, RF measurements, mobile military or forensic activities, and personal protection in the field. Faraday tents offer a mobile solution for only a fraction of the cost compared to a conventional Faraday cage.

SHIELDING PERFORMANCE* (DB)

APPLICATIONS

- Computer and cell-phone forensics
- Military field or embassy use
- Secure or TEMPEST communication
- Radar-jammer protection
- Electromagnetic allergy / electro-smog
- Pre-compliance testing
- Temporary EMI shielding
- Reverberation chamber (RVC)
- Mode-stirred chamber (MSC)

ADVANTAGES

- Easy to mount and move, mobile laboratory
- Any size possible
- Optionally supplied with a rigid reinforced floor
- Single-layer Faraday tent: 40-60 dB up to 22.5 GHz
- Double-layer Faraday tent: 70-90 dB up to 22.5 GHz

OPTIONS

- Aluminium or reinforced mounting frame
- Shielded ventilation
- Waveguide for data transfer
- Cable sleeve for entry of filter cables
- Woven mesh ventilation panels
- Lighting for inside the tent
- Shielded signal- and power line filters
- Optionally supplied with a rigid reinforced floor and door for heavy load
- Many other options on request

» SHIELDED FARADAY TENTS

MOUNTING OPTIONS

Our Faraday tents can optionally be supplied with a mounting frame so they can easily be set up as a stand-alone structure almost anywhere, but they are usually supplied with mounting ropes to attach to a ceiling. Mounting ropes are generally used when the Faraday tent is installed inside a building in a permanent location.

ACCESS TO THE TENT

The typical entrance of a tent is a split door with a magnetic closing system. The closure with magnetic strips ensures superb electrical contact. For large tents, it is possible to turn a whole side into a door. If necessary, the entrance can also be equipped with conductive Velcro strips.

Adjustable rope to frame

Adjustable rope to ceiling

ADDITIONS (ON REQUEST)

As illustrated in the technical drawing above, our Faraday tents can be supplied with the following options:

- Rigid floor for heavy load (metal floor)
- Solid floor for medium load (wood)
- Shielded ventilation mesh / AC
- Cable sleeve for entry of filtered cables, Ø 80mm
- Shielded mesh window for visual contact
- Standard closure with magnet strips
- Power-line or signal-line filter according to your specifications
- Led light inside (battery powered)
- Led light inside (with power line filter on the net)
- Data transmission filter (optical conversion, including wave guide)
- Packing/transport bag
- Many other options on request

Please note: when you want to enter the tent with heavy equipment like vehicles, planes, tanks you need a rigid floor and a tent with magnetic strips to the bottom so that the entrance to the tent can be fully opened.

» SHIELDED FARADAY TENTS

STANDARD SIZES / SHAPES

We have a number of Faraday tents in standard sizes and shapes in stock. In addition, almost any size and shape can be made on request. Feel free to send us a technical drawing of the desired Faraday tent.

Please note : All measurements given in the tables below are outer dimensions. In a dual-layer tent, approximately 10 cm is lost on the inside of the tent. So when you order for example a 2 meters wide double layer shielded tent, the inside wide will be 1.90 meters.

PYRAMID (P)

Type	Size LxWxH	Ordering code
Small	1 x 1 x 2.3 meters	P-1x1x2.3
Medium	2.5 x 2.5 x 2.3 meters	P-2.5x2.5x2.3
Large	3 x 3 x 2.3 meters	P-3x3x2.3

RECTANGULAR (R)

Type	Size	Ordering code
Large	2.5 x 3 x 2.3 meters	R-2.5x3x2.3
Extra large	3 x 2 x 2.3 meters	R-3x2x2.3
Jumbo	5 x 3 x 4 meters	R-5x3x4

Please note : any other size on request

ORDER EXAMPLE

Product	Shape	Width (m)	Depth (m)	Height (m)	Layers
Shielded tent	P : Pyramid S : Square R : Rectangular O : Round	The width of the tent in meters	The depth of the tent in meters	The height of the tent in meters	1 : Single layer 2 : Double layer
Frame	Lighting

PREFABRICATED FARADAY CAGES

Our prefabricated self-standing modular Faraday cages offer superior screening of RF/LF/HF signals, e.g. for R&D, TEMPEST and Testing purposes

A freestanding (independent of the host building) prefabricated modular Faraday cage provides a superior screening of RF-signals and is applicable in a wide range of situations for a wide range of purposes.

The modular Faraday cage is designed to meet or even exceed the vast majority of shielding requirements requested in todays society.

APPLICATIONS

- LF/RF/HF tests
- EMC test labs
- Wireless product testing
- EMI/RFI shielded server rooms
- Protection of sensitive information (NATO TEMPEST standards)
- HEMP & EMP protection
- Neuroscience laboratories
- Cellular communication devices
- Immunity & emission test chambers
- Anechoic chambers
- MRI rooms
- Neurology labs

ADVANTAGES

- Freestanding construction
- High shielding performance without deterioration
- Easy to modify, enlarge or reinstall with conventional hand power tools
- Optionally supplied as a kit for assembly by the user
- Easy to mount by skilled local workers
- Many sizes directly available from stock, custom designs available within a few weeks
- Standard 10 years warranty, moving parts and electronics excluded

OPTIONS

Examples of several options are listed below:

- (Customized) shielded honeycomb ventilation panels
- Shielded doors
 - Automatic sliding doors
 - Double leaf door
 - Double door as in sluice-gate construction
- Bolts on the in-or outside for construction convenience
- Shielded piping for water or gas flow
- Acoustic panels on the inside
- Lightweight version
- Entry panel fitted with:
 - Power filters, single- or three phase +N (specify amperage, voltage and frequency)
 - Feed through signal filters
 - Wave guides for passage of fiber-optic cables
 - Feed through penetration (e.g. SMA- or BNC connector)
 - Grounding bolt

» PREFABRICATED FARADAY CAGES

SHIELDING PERFORMANCE*

Shielding performance graph of a standard prefabricated cage vs a high performance Faraday cage.

Prefabricated Faraday cage [Magnetic]

Prefabricated Faraday cage [Electric]

ADDITIONAL PRODUCT INFORMATION AND MATERIAL USE

The prefabricated Faraday cage consists of galvanized (2mm thick) Mu-Ferro steel shielding panels. The galvanization ensures excellent resistance to corrosion.

Gaskets are applied between all panels of the Faraday cage to ensure a good electrical conductivity and a good seal between the panels. The gaskets are produced in our gasket production facility.

To ensure a high shielding performance over time, the bare modular prefabricated Faraday cage construction does not contain any wooden parts that could be affected by variations in temperature or moisture.

In short, the corrosion resistant panels guarantee excellent electrical conductivity and provide a high shielding effectiveness.

SMOOTH EXTERIOR AND FUNCTIONAL INTERIOR

The panels are bolted together along their edges on the inside, leaving a smooth exterior. Lighting, busbars and furnishings can be mounted directly on the inside of the panels (see image above).

Versions for direct attachment of ferrite, and RF pyramidal absorbers can also be supplied to create an echo-free (anechoic) test chamber.

» PREFABRICATED FARADAY CAGES

FULLY FINISHED INTERIOR

We can also provide a fully finished interior. The walls and ceiling of the cage are then completely decorated with wood, and the floor with carpeting so that the shielding panels of the cage are no longer visible.

Below is an example of a prefabricated Faraday cage before and after its interior finish.

Air conditioning, lighting, wall outlets cable ducts, work tables and many more features can be taken into account in this complete interior finish.

HOW TO ORDER

For a quotation of a prefabricated Faraday cage please send an email with drawings of the room that requires shielding.

In case no drawings of the room are available, we must know the amount of square meters that require shielding. Also indicate the application of the shielded room. This enables us to think about the right solution from scratch.

*Notice

Information supplied in these data sheets is based on independent and laboratory tests which Holland Shielding Systems BV, hereafter referred to as HSS believes to be reliable. HSS has no control over the design of customer's product which incorporates products, therefore it is the responsibility of the user to determine the suitability for his particular application and we recommend that the user make his own test to determine suitability.

IN HOUSE PRODUCTION FACILITY

We produce Faraday cages daily and are therefore able to quickly deliver standard sizes from our large stock. The panels we keep in stock can also be adjusted quickly according to your needs, for example for the input of power line filters, waveguides, honeycomb ventilation panels, etc. These custom sizes can be produced in several weeks from order date. When desired, the Faraday cage can also be adjusted on location.

We can deliver a cage in any requested size with any requested attenuation. If a straightforward cage with low attenuation requirements is desired, we can deliver the cage standard from stock for an attractive price.

The modular panels can be shipped and assembled by the customer or under supervision of our engineers, anywhere in the world.

The product described in this data sheet shall be of standard quality, however the products are sold without warranty of fitness for a particular purpose, either expressed or implied, except to the extent expressly stated on HSS invoice, quotation or order acknowledgment. HSS does not warrant that products described in this data sheet will be free of conflict with existing or future patents of third parties. All risks of lack of fitness, patent infringement and the like are assumed by the user.

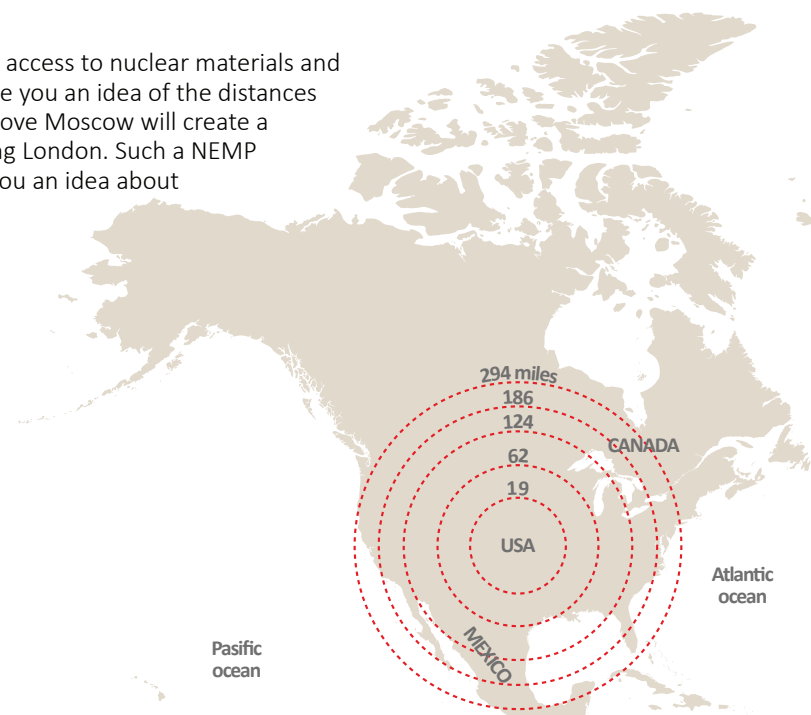

ELECTROMAGNETIC PULSE PROTECTION

The threat of an EMP attack is today more real than ever. Countries like North Korea and Iran already have the technology available to launch an EMP attack and the consequences will be devastating. EMP is like super-energetic lightning. Instead of striking a point it can cover an entire nation, like the continental United States, with an EMP field. A nuclear EMP attack (NEMP) would destroy electronics everywhere, cause planes to crash, stop cars and rail traffic, blackout electric grids and other critical infrastructures that make modern civilization, and life itself, possible. Eventually, millions would die from starvation, disease, and societal collapse. EMP missiles are not the only threat to the technology driven modern world as we know today. Other realistic threats are Solar storms, terrorism or even on smaller scale DIY EMP guns. On Youtube you can find the instructions to build an EMP gun within minutes. The size of these guns vary from hand-held to JOLT generators (A Highly Directive, Very Intensive, Impulse-Like Radiator) which fits onto a small truck, which they can park next to your data center.

More and more nations and organizations have access to nuclear materials and this presents a risk of nuclear explosions. To give you an idea of the distances involved: a nuclear burst in the stratosphere above Moscow will create a NEMP field over all of Western Europe, including London. Such a NEMP field can destroy all unprotected data. To give you an idea about the impact on the USA alone.

» ELECTROMAGNETIC PULSE PROTECTION

IEMI THREAT

There are several electromagnetic (EM) threats. Intentional electromagnetic interference (IEMI) is another growing risk around the world. With all the electric devices and automatically controlled processes our vulnerability is growing. Also the complexity of all the radiation is rising. More possibilities and problems require all sorts of different solutions. Think about Smart Electrical Grids, Virtual Reality, Driver less Cars, Eye Tracking Technology, High Efficiency Photo-voltaic Cells, Green Energy Electrical Power Converter, Wireless Wearable Tech, Graphene, Ion-thruster Energy, etc.

The difference between EMI and IEMI is that IEMI is intentional electromagnetic interference. With the increasing risk of terrorist attacks, electronic warfare, smart burglars and hackers more and more interference is caused on purpose.

IEMI usually occurs in a small frequency band. An EMP or HEMP (high altitude EMP) usually occurs in a broadband nature. EMP threats are one of the largest electromagnetic threats of this time. The amount of impact is tremendous. The range of such an attack is outstanding. A HEMP is a high amplitude short duration, broadband pulse of electromagnetic energy. This can have a highly destructive effect on the world which does not function without electronics.

EMP IS A THREAT FOR

- National security
- Data centers
- Telecommunications
- Heating companies
- Transportation sector
- Banks and other financial services
- Security systems
- The electricity distribution infrastructure
- Hospitals and public health facilities
- Oil/gas industry
- Water treatment facilities
- All other not mentioned technology driven instances.

ACTIVE SYSTEMS LIKE EMP BURST DEVICES

A portable, battery-powered EMP burst device can generate extremely powerful fields in almost no time. One such burst can be enough to damage all servers and other (safety) electronics in your location.

On the internet you can easily find instructions for making an EMP burst device. A handyman can construct one in a few hours with commonly available components. For people who have difficulty reading the texts, there is even an instruction video on YouTube.

And a lazy or less technically skilled criminal can rent a portable device, a fully anonymously, for less than US \$1.000, from several sources all over the world. It is a real industry, an entirely new type of crime.

Through the air these NEMP waves will propagate for hundreds of meters, and concrete walls are no obstacle. The waves can also travel through existing cables, through the metallic protection around cables or even common pipelines for gas and water, bringing the data-killing power burst to its intended target:

YOUR DATA CENTER.

» ELECTROMAGNETIC PULSE PROTECTION

EMP PROTECTION SOLUTIONS AND ENGINEERING

We are worldleading in engineering and production of EMP protections. Think about EMP protected Faraday cages, EMP data and power line filters, EMP Ethernet converter units, etc.

Our engineers are specialized in the protection against EMP attacks. We have a specialized product range for the protection against EMP threats.

The shielding effectiveness exceeds the minimum HEMP requirements as specified in the MIL-STD-188-125 (HEMP protection for ground-based C4I facilities performing critical, time urgent missions).

Our filters are tested with our in-house test facility with which we are capable to perform PCI as per E1 (20/500ns 5kA peak) and E2 (1.5/4000µs 250A peak) test pulses. With our testing facilities we make sure that our filters comply with the highest demands and that the residual currents are within limits of the applicable standards and norms.

*EL/E2 power line filter
test by our specialists*

» ELECTROMAGNETIC PULSE PROTECTION

Below you find a selection of products which will help you to protect your facility from EMP attacks. A complete Faraday cages is depicted including all the components we manufacture with an electromagnetic pulse protection. In our development laboratory we can develop any EMP protected product according to your wishes. Our testing facility can also provide you with a broad EMP measurement analysis.

Contact info@hollandshielding.com for a quote on testing your product/device/etc. We have broad experience in EMP protection internationally.

Faraday cages and components

9540 - EMP ventilation panels

power, signal & data line filters

IP enclosures & PCB housings

MU-COPPER CAGES

Mu-copper foil is used to create a Faraday cage in an existing room or building

MU-COPPER WALL COVERING SYSTEM

Mu-Copper foil has high attenuation properties in the electrical field (up to 120 dB) as well as in the magnetic field.

It is easy to apply, like wallpaper, thanks to its special adhesive for walls, ceilings and floors. The interior finish can be plaster board, foam tiles or plywood.

The 0.12mm thick Mu-Copper is used to transform a regular room into a shielded room; the product has excellent shielding performance even at low frequencies. The system is easy to mount on shielded doors with clamping devices. The standard width of Mu-Copper is 1000mm. The foil can be delivered on rolls or as ready-made sheets.

OVERLAP OPTIONS

For the joints you can use a 50mm overlap. For extra high performance you can fully solder the joints or use a seaming /copper tape with a conductive self-adhesive to apply over the joints.

VENTILATION

For ventilation we have developed honeycomb ventilation panels. Especially for the Mu-copper Faraday cages we can deliver honeycomb vent panels with a Mu-copper flap around the edges. It is easy to solder these into the Mu-copper Faraday cage

ADVANTAGES

- Cost-effective / takes up little space
- Light weight / high floor load
- Can be constructed with local labour
- Standard interior finish possible like plasterboard
- Can be delivered with 10 year guarantee
- Maintenance free
- Delivery with turnkey measurement report

APPLICATIONS

- EMI shielded server room
- EMI shielded MRI room
- Server rooms
- EMC test rooms
- Computer rooms
- Medical examination rooms
- MRI, EEG, EMG & EVP
- Rooms for physiotherapy
- Radar protection/Airport
- TEMPEST Sites
- Military EMC protection
- Board room shielding
- Industrial espionage/ Secure room
- Buildings for intelligence agencies

» MU-COPPER CAGES

SHIELDING PERFORMANCE*

*General information about the measured cage: 0.12 mm thick Mu-copper foil with 50 mm overlap (fully soldered). Dimensions 10 x 6 x 4 m. One door 0.9 x 2.1 m. Two honeycomb ventilation panels. Four power line filters.

OPTIONS

The Mu-copper Faraday cage can be equipped with the following options:

- Wave guides for data communication
- Shielded windows
- Shielded ventilation panels
- Power line filters
- Signal line filters
- Shielding solutions for water pipes and (medical) gases
- Standard interior finish is possible (like glued plasterboard, foam tiles or plywood)

CEILING

The system can be used with a detachable or fixed ceiling to separate existing ducts and cables from the shielded room.

MODIFIED RF SHIELDED DOOR

When a lower performance of e.g. 40-60 dB is acceptable, we can retrofit your existing door. The door is then equipped with gaskets at the top and sides, and with a conductive copper brush and doorstep at the bottom. Both swinging and sliding doors are suitable for being shielded this way.

For heavy duty applications we can supply Faraday cage doors that offer up to 140 dB reduction.

COMPONENTS

In addition to EM shielded doors and windows, the screened rooms can be equipped with the following components:

- Shielded doors
- Shielded windows
- Shielded ventilation panels
- Power and signal filters

We also offer shielding solutions for water pipes, medical gases, and ventilation when needed.

You can create a Faraday cage with high shielding performance yourself in an economic way, using local labour. This is possible in existing buildings as well as in new ones, without loss of space. Depending on the quality of the doors, vent panels, filters and/or windows used, attenuation levels up to 80-100 dB in the E-field can be realized. When more layers are applied, it is possible to achieve over 120 dB.

ORDER EXAMPLE

You can indicate below how many square meters Mu-copper foil you need for covering your room. You can also specify if you want an offer for adhesives for pasting the Mu-copper on the walls and solder for closing the seams.

In order to make a more specific offer for a Mu-copper cage please send your drawing to info@hollandshielding.com

Mu-copper (M²)	Adhesive	Solder
Indicate how many square meters Mu-copper foil you need	WA : With adhesive NA : No adhesive	WS : With solder NS : No solder

AMUCOR FARADAY CAGE

Amucor foil can be used to create a Faraday cage in an existing room or building

Amucor foil has high attenuation properties in the electrical field (up to 110 dB) as well as in the magnetic field (see shielding performance table).

It is easy to apply because the foil is provided with a very strong self-adhesive. For an extra good result, we recommend applying plasterboard before applying the film. After the application of the foil Amucor the interior can be finished with an extra finishing layer of plaster board, foam tiles or plywood.

The 48 µm thick Amucor is used to transform a regular room into a shielded room; the product has excellent shielding performance even at low frequencies. The system is easy to mount on shielded doors with clamping devices. The standard width of Amucor is 1000mm; the foil can be delivered on rolls or as ready-made sheets.

OVERLAP OPTIONS

For the joints you can use a 50mm overlap. For extra high performance you can apply a 50mm wide aluminium tape over the seams.

ADVANTAGES

- Cost-effective / takes up little space
- Equipped with self-adhesive allowing applying the film very easy
- Light weight / high floor load
- Can be constructed with by local contractor under supervision of Holland Shielding Systems
- Standard interior finish possible like plasterboard
- Can be delivered with 10 year guarantee
- Maintenance free
- Delivery with turnkey measurement report

VENTILATION

For ventilation we have developed honeycomb ventilation panels. Especially for the Amucor Faraday cages we can deliver optimized honeycomb vent panels for this type of cage.

AMUCOR WITH A REINFORCEMENT NET 4706

Amucor foil can also be produced with a strengthening reinforcement net. Because the material with the reinforcement net is so strong, it can be produced in a very large width of 3100mm. This material is designed to cover walls and floor for protection against unwanted radio frequencies (RF).

We fabricate self-adhesive Amucor foil up to 1100mm width for quick covering complete rooms. We also have a 3100mm (10ft) width version is available.

APPLICATIONS

Amucor film is suitable for a large scale of applications where a medium performance reduction is required. Below we have made a small list of some commonly used applications.

Data security for:

- Computer rooms
- Industrial espionage/ Secure room
- Intelligence agencies
- Board room shielding

RF Noiseless:

- Data security for: server rooms
- Computer rooms
- Industrial espionage/ Secure room
- Intelligence agencies
- Board room shielding
- Free from Radar interference on Airports
- TEMPEST Sites
- Military EMC protection

HSS has no control over the design of customer's product which incorporates products, therefore it is the responsibility of the user to determine the suitability for his particular application and we recommend that the user make his own test to determine suitability.

SHIELDING PERFORMANCE* BASIC MATERIAL (DB)

Field	Frequency	Amucor	Amucor + seaming tape
H	200 MHz	27 dB	27 dB
H	1 MHz	63 dB	63 dB
E	10 kHz	63 dB	80 dB
E	200 kHz	63 dB	80 dB
E	1 MHz	63 dB	80 dB
E	1 GHz	63 dB	80 dB
E	2.4 GHz	75 dB	82 dB
E	5 GHz	77 dB	90 dB
E	10 GHz	103 dB	93 dB
E	20 GHz	90 dB	97 dB

Shielding performance of Amucor foil 48 µm thick

Measurements according to MIL STD 285/IEEE-299 and the following situation:

- Amucor foil 48 µm thick, fully soldered
- Dimensions 10 x 6 x 4 m
- 1 Door 0.9 x 2.1 m
- 1 Waveguide
- 1 Power filters

You can create a Faraday cage with high shielding performance yourself in an economic way, using local labour. This is possible in existing buildings as well as in new ones, without loss of space. Depending on the quality of the doors, vent panels, filters and/or windows used, attenuation levels up to 80-100 dB in the E-field can be realized.

ORDER EXAMPLE

You can indicate below how many square meters Amucor foil you need for covering your room. Amucor foil comes with a self-adhesive so it's easy to apply.

In order to make a more specific offer for a Amucor Faraday cage please send your drawing to info@hollandshielding.com

amucor foil (m²)

Indicate how many square meters Amucor foil you need

The product described in this data sheet shall be of standard quality, however the products are sold without warranty of fitness for a particular purpose, either expressed or implied, except to the extent expressly stated on HSS invoice, quotation or order acknowledgment. HSS does not warrant that products described in this data sheet will be free of conflict with existing or future patents of third parties. All risks of lack of fitness, patent infringement and the like are assumed by the user.

ANECHOIC CHAMBERS

An anechoic chamber yields superb shielding performance

Our anechoic chambers are constructed as shielded rooms whose walls and ceiling are completely covered with absorbing materials and/or ferrite tiles. The anechoic chambers offer superb shielding performance and are mainly applied in EM-emission testing according to commercial and military standards.

The anechoic chambers are used to perform compliant radiated immunity tests in accordance to EMC standards such as IEC / EN 61000-4-3.

They provide a full compliance immunity test site for the frequency range of 26Mhz to 18GHz and are also suitable for the free-space emission test suggested in PREN 50147-3.

We can also construct open-area test sites.

If you wish to receive a quote for an anechoic chamber send a drawing of the room in question. Do you have any drawing please contact us via email (info@hollandshielding.com) or our contact form on our website to pass on all the specifications of the room.

It is important to indicate the purpose of the room or possibly the desired frequency range in which the room should work. Also indicate the size of the door to the room and the amount of power and ventilation needed in room.

EMISSION PERFORMANCE – 26MHZ-18GHZ IMMUNITY 26 MHZ-18GHZ

Key features

- Fully compliant design to meet UKAS and FCC requirements
- Any dimensions are possible
- Emission performance of +/-4 dB or better in the 30 MHz- 40 GHz frequency range
- Fully compliant for immunity in accordance with EN61000.4.3
- Ferrite and hybrid lining from 30 MHz- 40 GHz measurements
- Very cost-effective solution
- Flexible modular design enables you to make easy site changes or upgrades

TURNKEY SYSTEMS

A complete system approach is available to fully facilitate your laboratory and includes:

- Electrical distribution
- Turntables/dynamometers
- Masts
- CCTV
- Air conditioning
- Fire detection and suppression
- Emission & immunity measurement systems

FARADAY CAGE DOORS

EMI/RFI/EMP-shielded doors for use in Faraday cages and EMI/RFI shielded rooms

Designing and manufacturing standard and custom EMI/RFI-shielded doors for EMI/RFI-shielded rooms and Faraday cages. High performance single and double knife finger-strip doors in sliding, swinging and even double swinging implementations are some of the many possibilities. Our engineers will be happy to help you find the best solution possible.

We also produce sets to shield doors with gaskets at the top and sides, while the bottom can be provided with a electrically conductive copper brush and doorstep.

Virtually every type of door can be provided in a swinging or sliding implementation.

OPTIONS

- Fireproof
- Automatic closing
- Gas tight
- (Automatic) locking system
- Soundproof
- Clean room specifications

TYPES

- HDFFD : Heavy duty fingerstrip door
- FDWSF : Fingerstrip door with soldered fingers
- FDWCF : Fingerstrip door with clamped fingers
- SPD : Standard performance door
- SMD : Standard modified door

SHIELDING PERFORMANCE* WITH DIFFERENT SHIELDING DOORS

» FARADAY CAGE DOORS

EMI/RFI-SHIELDED SLIDING DOORS

The fully automatic EMI/EMP/RFI-shielded sliding doors are designed for RF and EMP-tight enclosures. They can be integrated in EMI/RFI-shielded rooms and are also suitable for other types of shielding.

There are two steps involved in opening the sliding door:

- Unlatching of the contact-spring system and outward movement;
- Sideways movement of the door leaf.

The movements of the door and ramp are fully automated; they are operated electrically and pneumatically. Each opening and closing of the door has a self-cleaning effect on the contact surfaces (fingerstrips and knife of the door). Sizes range from 1 x 2.1 meters to a 'jumbo-sized' door of 8 x 12 meters.

OPTIONS

- Fireproof
- Automatic closing
- Gas-tight
- (Automatic) locking system
- Soundproof
- Clean room specifications

TYPES

- Single fingerstrip door (fingerstrip door with soldered or clamped fingers)
- Double fingerstrip door (heavy-duty fingerstrip door)
- Standard modified door with gaskets (copper-plated wooden door, with copper brush and copper doorstep)

SWINGING DOORS

The fingerstrip swinging doors are well known for their high shielding performance and are used in prefab cages as well as in our Mu-Copper systems. We manufacture single fingerstrip doors for medium shielding performance and double fingerstrip doors for high shielding performance (reductions up to 140 dB). Delivery from stock is possible in various dimensions. In EMC applications, ferrite tiles can be affixed to the standard door leaf.

OPTIONS

- Fireproof
- Automatic closing
- Gas tight
- (Automatic) locking system
- Soundproof
- Clean rooms specifications

To achieve the various attenuation levels required, we have several types of swinging door in our assortment.

TYPES

- Single fingerstrip door (fingerstrip door with soldered or clamped fingers)
- Standard performance door for hospital use
- Standard modified door (copper-plated wooden door, with copper brush and copper doorstep)

» FARADAY CAGE DOORS

WOODEN MODIFIED DOORS FOR EMI/RFI-SHIELDED ROOMS AND CHAMBERS

For applications with a performance up to 40-60 dB we can upgrade a wooden door to a shielded door. The modified wooden door can be supplied in a sliding or a swinging implementation. The wooden modified door is used in hospitals, e.g. in EEG, EMG, and measurement rooms.

STANDARD SIZES

Standard shielded leaf doors in steel/wooden or steel frames
Width: single 800 / 1200mm, double 1500 / 2000mm
Height: 2000 / 2100 / 2500mm.

ORDER EXAMPLE

Door	Width (mm)	Height (mm)	Implementation
HDFD : Heavy duty fingerstrip door FDWSF : Fingerstrip door with soldered fingers FDWCF : Fingerstrip door with clamped fingers SPD : Standard performance door SMD : Standard modified door	Width of the door in mm (millimeters)	Height of the door in mm (millimeters)	Swing : Swing door Sliding : Sliding door

MU-FERRO HD 6800

magnetic shielding for
sensors and electronic devices

Electromagnetic fields can affect electrical equipment, magnetic systems and also living organisms. For magnetic shielding of electronic devices and PCs we have developed the Mu-ferro HD 6800 series.

Mu-ferro HD can be used to prevent low frequency magnetic radiation (0Hz- 100 kHz) from leaving a device, or it can be applied around a sensitive device or sensor, to prevent external electromagnetic interference from disrupting normal operations.

Mu-ferro HD offers important magnetic-field shielding characteristics, due to its high magnetic permeability and its ability to absorb magnetic energy. This allows for the highest possible attenuation, making this shielding alloy the material of choice for reducing low-frequency electromagnetic interference.

For magnetic shielding of electronic devices our Mu-ferro 6800-HD is available in plate material that is 1, 0.8, or 0.5mm thick. In addition we will be happy to produce custom shapes which will deliver the best shielding effect possible in your situation.

Mu-ferro HD is also available as a foil or tape, delivered on rolls (0.024mm thick) with or without regular or conductive self-adhesive for high-frequency shielding and easy mounting. For more information, part number 3208.

ORDER EXAMPLE

If you need a rectangular piece of Mu-ferro HD then you can specify the part number as in the blocks below. When you need a cut to shape or form made piece of Mu-ferro metal then send us a drawing of the relevant form.

Series	Width (mm)	Length (mm)
Mu-ferro HD 6800	<div>Specify the width in mm.</div>	<div>Specify the length in mm.</div>
	<div>Length (mm)</div>	
	<div>0.5 : 0.5mm thick</div>	
	<div>1.0 : 1.0mm thick</div>	

APPLICATIONS

- Aviation and aerospace industries
- Sensitive sensors
- Medical equipment
- Physics research
- Telecommunication
- Automotive
- Military

SHIELDING EFFECTIVENESS*

PROPERTIES

Item	Data
Carbon	0.02%
Manganese	0.50%
Silicone	0.35%
Nickel	80.00%
Molybdenum	4.20%
Iron	Balance
Density kg/m3	8747
Thermal conductivity W/m K	34.6
Electrical conductivity micro-ohms	580

TRANSFORMER SHIELD 6800

New material for shielding/screening
low-frequency magnetic fields

INDOOR TRANSFORMER ROOMS

The frequency of these magnetic fields is typically 50/60 Hz. The Mu-Ferro material is suitable for magnetic shielding in frequency ranges from 10 Hz to 100 kHz.

CUSTOMER BENEFITS

- Cost-effective solution
- Up to 95% field-strength reduction or more
- Flexible design
- Measurement report
- 10-year guarantee

Mu-Ferro combines permeable and satiety characteristics which makes it extremely suitable for screening low-frequency magnetic fields.

APPLICATIONS

- Transformer rooms (indoors or outdoors)
- Power plants
- Aluminium melting/production
- High-voltage labs
- Anything that creates strong magnetic fields (high currents)

EXAMPLE OF A PROJECT

Due to space restrictions, one of our clients was forced to turn a room which had formerly been used for storage into an office space; this room was located on the floor above power transformers. However, powerful magnetic fields were noticed in that room which made the computer displays flicker, so we were asked to carry out a magnetic field measurement. It was found that the magnetic field strength was far above the standard referred to above- it was 750 nTesla. This magnetic field was reduced by the installation of an umbrella construction of Mu-Ferro 6800. Since completion of this project, the magnetic field has been reduced to only 80 nTesla.

WHY USE MAGNETIC SHIELDING/SCREENING?

Magnetic fields pose a serious threat to human health and wellbeing. For instance, research has shown that exposure to magnetic fields of > 300 nT or 0.003 Gauss significantly increases a person's chances of developing leukemia. And there are numerous other physical symptoms associated with exposure to magnetic fields, e.g. headaches, depression, and insomnia. For this reason the Health and Safety Codes in many countries recommend that for working spaces exposure should be < 0.5 μ T=500 nT and for public spaces it should be < 0.1 μ T=100nT.

Apart from their negative impact on health, strong magnetic fields can cause interference or damage to electronics in the direct vicinity of where the field is generated. Magnetic fields also interfere with sensitive measurements in hospitals and laboratories.

MEASUREMENT

Before the screening/shielding is ordered and installed, we can conduct a site survey (magnetic field strength measurement) for you. We not only measure the magnetic field strength but also locate its probable source. The measurement results are then presented in a report.

We can implement magnetic shielding even after the transformer has been put into place. For screening entire buildings, or rooms, the shielding material is applied to walls, ceilings and/or floors. This protects both people and electronics.

SHIELDED RACKS

EMI shielding metal racks and enclosures

METAL CABINETS, (19") RACKS AND SHIELDED ENCLOSURES

As the threat of IEMI or EMP attacks become more real and the awareness of the risks rises, the necessity of shielded racks and/or datacenters increases. Holland Shielding offers shielded racks which can fully customized to your requirements.

APPLICATIONS

- IEMI (intentional Electromagnetic interference)
- Tempest
- Eavesdropping
- Solarstorms
- EMP attacks
- MIL-STD-188-125
- Radiated attacks
- Lightning
- NSA 94-106

For more information refer to our Data center security

ATTENUATION LEVELS

We have 2 standard performance levels for our shielded racks, so you can pick the type of rack that will suit your application.

Level 1: This type of rack is based on the well-known racks in the market and optimized for the shielding of your equipment with our in house produced shielding materials. This rack will give you the basic protection and will reduce the incoming attack up to 10.000 times.

Level 2: The ultimate shielding will come from our racks which are a spin-off from our prefab Faraday cages. These racks are exceeding the most shielding effectiveness standards and offer a performance over 120dB.

WALL MOUNT

OPTIONS

All our racks can be fully customized to your requirements. Just note that every opening or cable is going to be a leakage in the RF shielding of the rack. For this purpose we have power and signal line filters.

Most integrated options are:

- Power-line filters
- Signal-line filters
- Ventilation honeycombs
- Waveguide
- I/O panel (BNC-,SMA-,N-Connector)
- 7894 UDP data-line filter
- 7896 USB 3.0 optical converter
- Fixed/sliding shelves
- Etc..

STANDARD DIMENSIONS

Level 1 rack
600/800/1200mm width
400/500/600mm depth
1200/1400/1600/1800/2000/2200mm height

Level 2 rack
1090x1170x2315mm WxDxH
any other size on request.

MORE INFORMATION

Do you have questions or would you like to receive more information about the shielded racks or our wall mounts? Our engineers can give you the right advise for your specific application or answers. Please send an email to info@hollandshielding.com.

WALL MOUNT SHIELDED RACKS

We deliver relatively simple shielded boxes for small studies to large EMI and FCC heavy-duty Shielded enclosures.

Our EMI shielded racks are constructed of our patented Mu-ferro 6800 series plate material, which is galvanically perfectly compatible with our EMI shielding gasket materials. This combination results in a very high shielding performance, also in the long term.

Our Shielded enclosures allow you to meet a wide variety of requirements for EMI/RFI suppression including:

- Mil Spec 285
- TEMPEST
- FCC Part 15
- European VDE

Our EMI & FCC product lines come in both vertical racks and sloped front consoles (15 & 30 degree). It is designed with double ledge, double plane corner construction which make it the strongest cabinet in the industry, capable of carrying up to 1400 kg of equipment.

ORDER EXAMPLE

Part number	Width (mm)	Depth (mm)	Height (mm)	Performance level
SR : Shielded racks WM: Wall mount	Specify the width of the shielded rack in mm	Specify the depth of the shielded rack in mm	Specify the height of the shielded rack in mm	1 : Level 1 2 : Level 2

LOW FREQUENCY MAGNETIC SHIELDED BOX

For shielding of low frequency magnetic fields, we produce shielded boxes made from our patented Mu-ferro HD material.

Mu-ferro HD is a material that is often used to prevent low frequency magnetic radiation (0 Hz – 300 kHz) from leaving a device, or it can be applied around a sensitive device or sensor, to prevent external electromagnetic interference from disrupting normal operations.

These boxes for shielding low frequency magnetic fields can be made in any desired shape and according to your supplied CAD drawings.

They can also be equipped with date-, signal- or power line filters to supply equipment within the box or to have data communication with the device in the box.

ORDER EXAMPLE

When you want to order Low frequency shielded boxes specify the part number as follow or send your drawing to info@hollandshielding.com.

Shielded box made from our patented Mu-ferro HD material specially developed for shielding low frequency fields

SHIELDING PERFORMANCE* OF 2MM THICK MU-FERRO-HD BOX

SHIELDED AND SOUND PROOF BRIEFCASE

These briefcases block wireless communication such as a communication with a mobile phone in the case. It is also not possible to make sound recordings with the phone inside the case because the case does not pass any sounds

These EMI shielded and sound blocking briefcase do block wireless communication such as a communication with a mobile phone.

Also, the briefcases are very good to prevent eavesdropping by, for example, telephones or audio recording devices because EMI shielded and sound blocking briefcases do not transmit sound from outside to the inside.

This means that it is also not possible to make sound recordings with any sound recording device inside the case.

STANDARD TYPES

These EMI shielded can be made in any custom size however, we have two standard sizes in stock.

Part number	Size
SSBC-400-150-500	Outside dimensions 500 x 400 x 150mm
SSBC-400-250-500	Outside dimensions 500 x 400 x 250mm

The briefcase block wireless communication & sound recordings

APPLICATIONS

- Put all the equipment of staff in the briefcases at secret meetings / Important decisions that can not be brought out.
- Put all your mobile equipment in the case when you do not want to be found/traced. To stay off the radar.
- Secret service, government, military applications.

BENEFITS

- No wireless communication with devices inside the case
- No visual communication with devices inside the case
- No sound transfer to devices in the case
- A case that fully shields and protects against leakage of data

ORDER EXAMPLE

Series	Width (mm)	Height (mm)	Depth (mm)
SSBC			
SSBC stand for Shielded and sound proof briefcase	The outside width of the shielded and sound proof briefcase in mm	The outside height of the shielded and sound proof briefcase in mm	The outside depth of the shielded and sound proof briefcase in mm

**COMPACT SHIELDED
EXPERIMENT BOX**

Compact shielded box to block wireless communication
during testing and measurements
working size 210(W)*354(D)*120(H)

Compact shielded test box (210 x 354 x 120mm)

By default, this box comes with 6 shielded SMA penetrations, 12Vdc, data line filter (RJ45), 2 times USB and a VGA penetration. Many other shielded conduits are available on request. They may optionally also be added later.

TECHNICAL SPECIFICATIONS

Data interface	RJ45+USB*2+RS232
Radio frequency interface	SMA*6
DC power outlet	DC*1
Work size(mm)	200(W)*334(D)*115(H)
Outer dimensions (mm)	210(W)*354(D)*120(H)
Box body material	Alu-alloy
Weight (kg)	4 kg
Working temperature(°C)	0-50
Frequency(GHz)	0.8~6GHZ
Isolation	≥80 dB @2.4GHz)&(≥70 dB @5.8GHz)
Appearance color	Beige

ATTENUATION

The RF shielded box is the most economical solution for example, blocking GSM, WiFi, Bluetooth and other wireless communication standards. The average attenuation over a wide frequency range is 80 dB.

Frequency (Mhz)	Attenuation (dB)
2400	Front 84, rear 79
5800	Front 83, rear 76

FEATURES

- Wireless communication test system
- For 3G, wifi, Bluetooth wireless test
- High levels of shielding attenuation, greater than 75dB
- Easy & Flexible operation in Lab and production line
- R&D, custom design
- Box can be equipped with shielded power filters for power connection in the box while still blocking all wireless signals
- Easy to transport

**MEDIUM SHIELDED
EXPERIMENT BOX**

Medium shielded box to block wireless communication
during testing and measurements
working size 230(W)*320(D)*160(H)

**Medium shielded test box
(230 x 320 x 160mm)**

- Audio frequency interface: N-SMA*6
- Box body material: Aluminum alloy with painted surface
- Application: for Bluetooth, WiFi, 3G, wireless test, RFID
- Frequency: 0~6000MHz.
- Work size(mm): 224.6(W)*320(D)*162.3(H)

TECHNICAL SPECIFICATIONS

Working frequency (GHz)	0~6GHz
Shielding effect	≥70 dB @2.4GHz ≥65 dB @5.8GHz
Interface type	DC,RJ45,RJ23, SMA,USB optional
Numbers of filters	2pcs
Working temperature (°C)	(0-70)
Working dimensions (mm)	224.6(W)*320(D)*162.3(H)
Outer dimensions (mm)	240(W)*389.86(D)*217(H)
Box body material	Aluminium alloy, the surface paint
Weight(kg)	8 kg

FEATURES

- High levels of shielding attenuation, greater than 70 dB
- Box can be equipped with shielded power filters
- Connection in the box while still blocking all wireless signals
- Easy & Flexible operation in Lab and production line.
- R&D, custom design
- Easy to transport

**COMPACT DESKTOP
MEASUREMENT BOX**

Compact size desktop type shielded box for testing
working size 350(W)*400(D)*300(H)

**Compact desktop measurement box
(350 x 400 x 300mm)**

- Makes an ideal solutions for Bluetooth, WiFi, 3G/4G phones test
- High isolation
- Easy & Flexible operation

TECHNICAL SPECIFICATIONS

Shielding effect	More than 70dB
Interface type	DB9*2, DB25*2, SMA*4
Numbers of filters	6pcs
Working temperature (°C)	Operating at room temperature
Working dimensions (mm)	350(W)*400(D)*300(H)
Outer dimensions (mm)	430(W)*538(D)*366(H)
Weight (kg)	20 kg
Appearance of color	Beige

FEATURES

- High levels of shielding attenuation, greater than 75 dB
- Box can be equipped with shielded power filters for power connection in the box while still blocking all wireless signals.
- Easy & Flexible operation in Lab and production line
- R&D, custom design

***Notice**

**MEDIUM DESKTOP
MEASUREMENT BOX**

Medium size desktop type shielded box for testing
measurement working size 450(W)*530(D)*435(H)

**Medium desktop measurement box
(450 x 530 x 435mm)**

TECHNICAL SPECIFICATIONS

Data interface	RJ45+USB*2+RS232
Radio frequency interface	SMA*4
DC power outlet	DC*1
Working dimensions (mm)	400(W)*400(D)*400(H)
Outer dimensions (mm)	450(W)*530(D)*435(H)
Box body material	Mu-ferro
Weight (kg)	30 kg
Working temperature (°C)	0-50
Frequency (GHz)	0~6GHZ
Isolation	≥70 dB @2.4GHz)&(≥65 dB @5.8GHz)
Appearance color	Beige

ATTENUATION

The RF shielded box is the most economical solution for example, blocking GSM, WiFi, Bluetooth and other wireless communication standards. The average attenuation over a wide frequency range is 80 dB. See attenuation table below.

Frequency (Mhz)	Attenuation (dB)
2400	95
5800	100

SHIELDING PERFORMANCE* (DB)

FEATURES

- Wireless communication test system
- For Bluetooth, WiFi, 3G, wireless test, RFID
- High levels of shielding attenuation, greater than 65 dB
- Easy & Flexible operation in Lab and production line
- R&D, custom design
- Box can be equipped with shielded power filters for power connection in the box while still blocking all wireless signals.

AUTOMATIC TEST BOX

Test box with automatic open & closure system
working size 433(W)*440(D)*313(H)

Automatic test box (433 x 440 x 313mm)

- Make a ideal solutions for bluetooth, wifi, 3G, 4G testing
- High isolation
- Easy & Flexible operation

TECHNICAL SPECIFICATIONS

Frequency (GHz)	0.8~6GHZ
Shielding effect	≥75 Db @2.4GHz ≥70 Db @5.8GHz
Radio frequency interface	SMA*4
Data interface	DC*1 USB*2RS-232*1 (could be customized)
AC power requirements	AC 110V-220V/50-60HZ
Work size(mm)	433(W)*440(D)*313(H)
Outer dimensions (mm)	530(W)*562(D)*395(H)
Box body material	Coll plated, the surface paint
Weight (kg)	30kg
Working temperature (°C)	0-50
Appearance color	Beige

FEATURES

- High levels of shielding attenuation, greater than 75 dB
- Box can be equipped with shielded power filters for power
- Connection in the box while still blocking all wireless signals.
- Easy & Flexible operation in Lab and production line
- R&D, custom design

BIG MOBILE MEASUREMENT BOX

Big size shielded box for laboratory purposes
working size 698(W)*686(D)*696(H)

Big mobile measuremt box (698 x 686 x 696mm)

- Radio frequency interface: N-SMA*2
- Box body material: Aluminium alloy with painted surface
- Application: for Bluetooth, WiFi, 3G, wireless test, RFID
- Frequency: 0~6000MHz
- Work size(mm): 698(W)*686(D)*696(H)

TECHNICAL SPECIFICATIONS

Working frequency (GHz)	0~6GHZ
Shielding effect	≥90 dB @4GHz ≥80 dB @5.8GHz
Interface type	VGA, DB9, DB25, USB2.0, USB3.0, SMA, RJ45, BNC, RCA, DC, AC optional
Numbers of filters	4pcs
Working temperature (°C)	(0-50)
Working dimensions (mm)	698(W)*686(D)*696(H)
Outer dimensions (mm)	878.5(W)*838(D)*907(H)
Weight (kg)	90 kg

FEATURES

- High levels of shielding attenuation, greater than 80 dB
- Box can be equipped with shielded power filters
- Connection in the box while still blocking all wireless signals
- Easy & Flexible operation in Lab and production line
- R&D, custom design

***Notice**
Information supplied in these data sheets is based on independent and laboratory tests which Holland Shielding Systems BV, hereafter referred to as HSS believes to be reliable. HSS has no control over the design of customer's product which incorporates products, therefore it is the responsibility of the user to determine the suitability for his particular application and we recommend that the user make his own test to determine suitability.

The product described in this data sheet shall be of standard quality, however the products are sold without warranty of fitness for a particular purpose, either expressed or implied, except to the extent expressly stated on HSS invoice, quotation or order acknowledgment. HSS does not warrant that products described in this data sheet will be free of conflict with existing or future patents of third parties. All risks of lack of fitness, patent infringement and the like are assumed by the user.

INVESTIGATION BOX
(WITH GLOVES & WINDOW)

Investigation box with build in led light and shielded gloves working size 500(W)*400(D)*406(H)

Investigation box (with gloves & window)
(500 x 400 x 406mm)

Investigation shielding box is designed for medium shielding performance of around 80 dB and keeping contact with the device under investigation.

The box is also equipped with shielded gloves so you can use and operate the appliances inside the box, without having to open the box and thus retains the shield.

By using the built-in LED lighting, it is possible to have a good view on the device and your hands inside the box.

TECHNICAL SPECIFICATIONS

Working frequency(GHz)	2.4GHz-5.8GHz
Shielding effect	≥65 Db
Interface type	DC*1+USB*2+RJ45+RS232
Working temperature(°C)	Normal work
Working Dimensions(mm)	500(W)*400(D)*406(H)
Outer Dimensions(mm)	547(W)*447(D)*438(H)
Weight(kg)	36
Appearance of color	Beige

SHIELDING PERFORMANCE* (DB)

FEATURES

- High levels of shielding attenuation, greater than 80 dB
- Box can be equipped with shielded power filters
- Connection in the box while still blocking all wireless signals
- Easy & Flexible operation in Lab and production line
- R&D, custom design

GAS SPRINGS

The shielded box is equipped with gas springs that makes opening and closing the box easy.

FILTERS & FEED-THROUGH
FOR SHIELDED BOX

Shielded boxes can be extended with different types of filters

We produce filter units that are suitable for use directly in our medium performance shielded boxes. These filters can also be used for other medium performance shielded enclosures such as Faraday tents. Please note: custom filters can be made on request.

STANDARD TYPES

Type 1
2 x RJ45 + 2 x USB + 2 x 12V

Type 2
1 x RJ45 + 2 x USB + 1 x 12V + 1 x Serial

Type 3
USB 2.0 Hi-Speed 480 Mbps compatible 50 dB filter suppression or >50dB, 2 - 6 GHz Panel mountable

Type 4
6 x SMA

Type 5
Power-line filters

Type 6
2 x HDMI

Type 7
2 x RJ45 + 2 x USB + VGA

Type 8
2 x DC + 2 x RJ45 + 2x USB

Type 9
79 + 2 x RJ45 + 4x USB 2.0 + USB 3.0

Type 10
79 + DB25+ VGA

Type 11
79 + 2x USB 2.0 + 4x RJ45

Type 12
79 + 5x RJ45

Type 13
79 + 2x USB 3.0 + 3x RJ45

HIGH PERFORMANCE SHIELDED BOX

Shielded box for wireless testing and forensics with very high performance

This EMI/RFI-shielded box has up to 120dB reduction of RF signals up to 5 GHz. This makes the shielded box ideal for testing cellular handsets, RFID, Bluetooth, Zigbee, WiMax, WLAN or similar wireless devices. The box can be constructed in any size required.

Thanks to its mobility, the box is well suited for forensics in cases where the current state of an electronic device needs to be frozen by blocking all wireless contact with the outside world.

By default this box comes with 10 shielded SMA penetrations. Many other shielded conduits are available on request, or they may optionally be added later to the filter plate at the rear of the box.

SHIELDING PERFORMANCE* (DB)

APPLICATIONS

- Digital forensics
- Wireless testing
- R&D
- EMC Testing

OPTIONS (ON REQUEST)

The box can be equipped with shielded power filters for a power connection to the box while all wireless signals remain blocked. In addition the box can be equipped with any or all of the following options:

- Shielded ventilation panels for heat transfer
- Shielded window to maintain visual contact with the devices inside
- Coaxial feed-through / signal filters
- Ethernet connection

DIMENSIONS

Inside: 280x390x200/160mm
Other sizes on request

The product described in this data sheet shall be of standard quality, however the products are sold without warranty of fitness for a particular purpose, either expressed or implied, except to the extent expressly stated on HSS invoice, quotation or order acknowledgment. HSS does not warrant that products described in this data sheet will be free of conflict with existing or future patents of third parties. All risks of lack of fitness, patent infringement and the like are assumed by the user.

MEASUREMENTS ON LOCATION

Measurements can be carried out in the low-frequency spectrum (0 Hz DC - 30 MHz) and in the high-frequency spectrum (9 kHz - 22 GHz) at any location specified by the client

EMF MEASUREMENTS/EM MEASUREMENTS/ELECTRO-MAGNETIC RADIATION

Electromagnetic fields cause interference in electronic devices and may affect the health of people close to where the fields are generated. It is important to recognize this at an early stage in a construction process, for instance at a future construction location or while construction is already underway, so that budgets are not exceeded.

By means of field-strength measurements one can chart the existing electromagnetic fields and radiation emitted by GSM, UMTS antennas and transformer spaces, to mention a few examples.

These measurements can help determine the best location in the new building for rooms where sensitive measurements are to take place, e.g. in hospitals or nano laboratories. And last but not least, field-strength measurements can detect sources of interference and can be part of a scheduled check of existing screened spaces and Faraday cages.

MAGNETIC FIELD-STRENGTH ELF MEASUREMENTS

Measurements can be carried out in the low-frequency spectrum (0 Hz DC- 30 MHz) for magnetic fields around installations through which high currents flow.

In most cases the frequency will be 50/60 Hz, for example in transformer rooms, overhead lines, busbar systems and switchboard cabinets, and in the vicinity of high-voltage cables and railway lines, both above and below the ground.

ELECTRIC FIELD-STRENGTH EMF MEASUREMENTS

Measurements can also be performed in the high-frequency spectrum (9 kHz-22 GHz), to measure electric fields generated by transmission equipment or installations including C2000, GSM and UMTS towers, radar systems, wireless devices, etc.

Tests may be performed to meet ICNIRP standards, 2013/35/ EU guidelines or alternative health recommendations such as SBM-2008.

APPLICATIONS

- Baseline
- Electromagnetic fields (V/m or W/m2)
- EMF measurement
- ELF measurement of transformer room (nano Tesla)
- Detection of sources of interference
- Established standards for health, environment, licenses, OSH regulations
- Determining location for rooms to conduct sensitive measurements
- Checking shielded areas
- Counter-check (second opinion)

ADVANTAGES

- Measurement on location
- Cost-effective
- Clear reporting
- Expertise in all screening/ shielding disciplines
- Recommendations regarding reduction of the fields
- Certification

*Notice

Information supplied in these data sheets is based on independent and laboratory tests which Holland Shielding Systems BV, hereafter referred to as HSS believes to be reliable. HSS has no control over the design of customer's product which incorporates products, therefore it is the responsibility of the user to determine the suitability for his particular application and we recommend that the user make his own test to determine suitability.

» MEASUREMENTS ON LOCATION

WHY PERFORM MEASUREMENTS?

It is extremely complicated to assess electromagnetic radiation from a theoretical point of view. It can even be said to be impossible, due to the many variables in the environment. That is why measuring at the location itself is often indispensable to chart the prevailing electromagnetic fields and to locate possible sources of interference.

PREVAILING FIELDS AND RECOMMENDED STANDARDS

There are recommended standards for both magnetic and electric fields, set by the Health Council as limits in the Telecommunications Act. Especially magnetic fields are considered a serious threat to health.

For instance, there is widespread concern regarding a causal connection between exposure to magnetic fields and leukemia in children. Besides that, there are numerous health complaints suspected of being associated with (or linked to) exposure to magnetic fields, for example headaches, depression and insomnia.

INSPECTION MEASUREMENTS OF FARADAY CAGES

Every Faraday cage needs regular maintenance check-ups. This does not only apply to the workmanship of the door. Because there can be many invisible reasons why a cage can become 'leaky' so it no longer works according to the specifications. Therefore we carry out control measurements on location. After the measurement, a certificate is provided. Periodic measurements are important for hospitals and companies with ISO (9000) certification.

HEALTH AND SAFETY MEASUREMENTS

For the safety and health of your personnel it's important to know if there are no dangerous fields near their working environments. Holland Shielding Systems can perform a measurement on location to determine the current field strengths.

These measurements are performed according to the 2013/35/EU guideline. A detailed report will give a detailed overview of the field strengths and a recommendations on how to shield you employers if too high fields strengths are being measured.

DETERMINING THE POSITION OF SENSITIVE MEASUREMENT ROOMS

When a map is made of the existing prevailing electromagnetic fields either during construction, in an existing building, or during remodeling, recommendations can be made for the optimal position for a sensitive measurement room.
