

Face protection

Face burning from radiofrequency radiation? Maybe its your eyes that burn, or the lips? This lightweight EMF face protection covers a large area while permitting total air flow. Cant fog up. Visor is made of a special wire mesh which is durable and gives good shielding performance (30 dB). Easy to see through, but it is a mesh so not suitable for fine work. Visor flips up when needed. Plenty of room inside for prescription glasses or sunglasses. Elastic headband stretches to fit most head sizes.
